The background of the image is a night sky filled with stars, with a road leading into the distance. The road is illuminated by a light source, possibly headlights, and has white dashed lines. The sky is dark blue with many small white stars. The text is overlaid on the upper part of the image.

SAP HANA[®] 2

**NEXT-GENERATION PLATFORM
for DIGITAL Transformation**

SAP HANA SPS12

- Run applications without maintenance upgrade disruptions
- No new support package stacks (SPS)
- Maintenance revisions for SAP HANA SPS12 is provided until **May 2021**

SAP HANA[®] 2

- Run and build next-generation apps using latest technology innovations
- Twice-a-year support package stacks (SPS)
- Maintenance for SPS provided until next 2 SPSs are released (Example: SPS00 supported until SPS02)

Upgrade options to SAP HANA 2

Simple update. No database migration.

- Simple upgrade from SAP HANA SPS10, SPS 11 or SPS12
- Use SAP HANA capture and replay to test before going live
- Existing SAP applications may run on SAP HANA 2 after validation

Innovate without disruption

Innovate with simplified IT

Upgrade to gain maintenance until May 2019

Run apps without DB maintenance disruptions

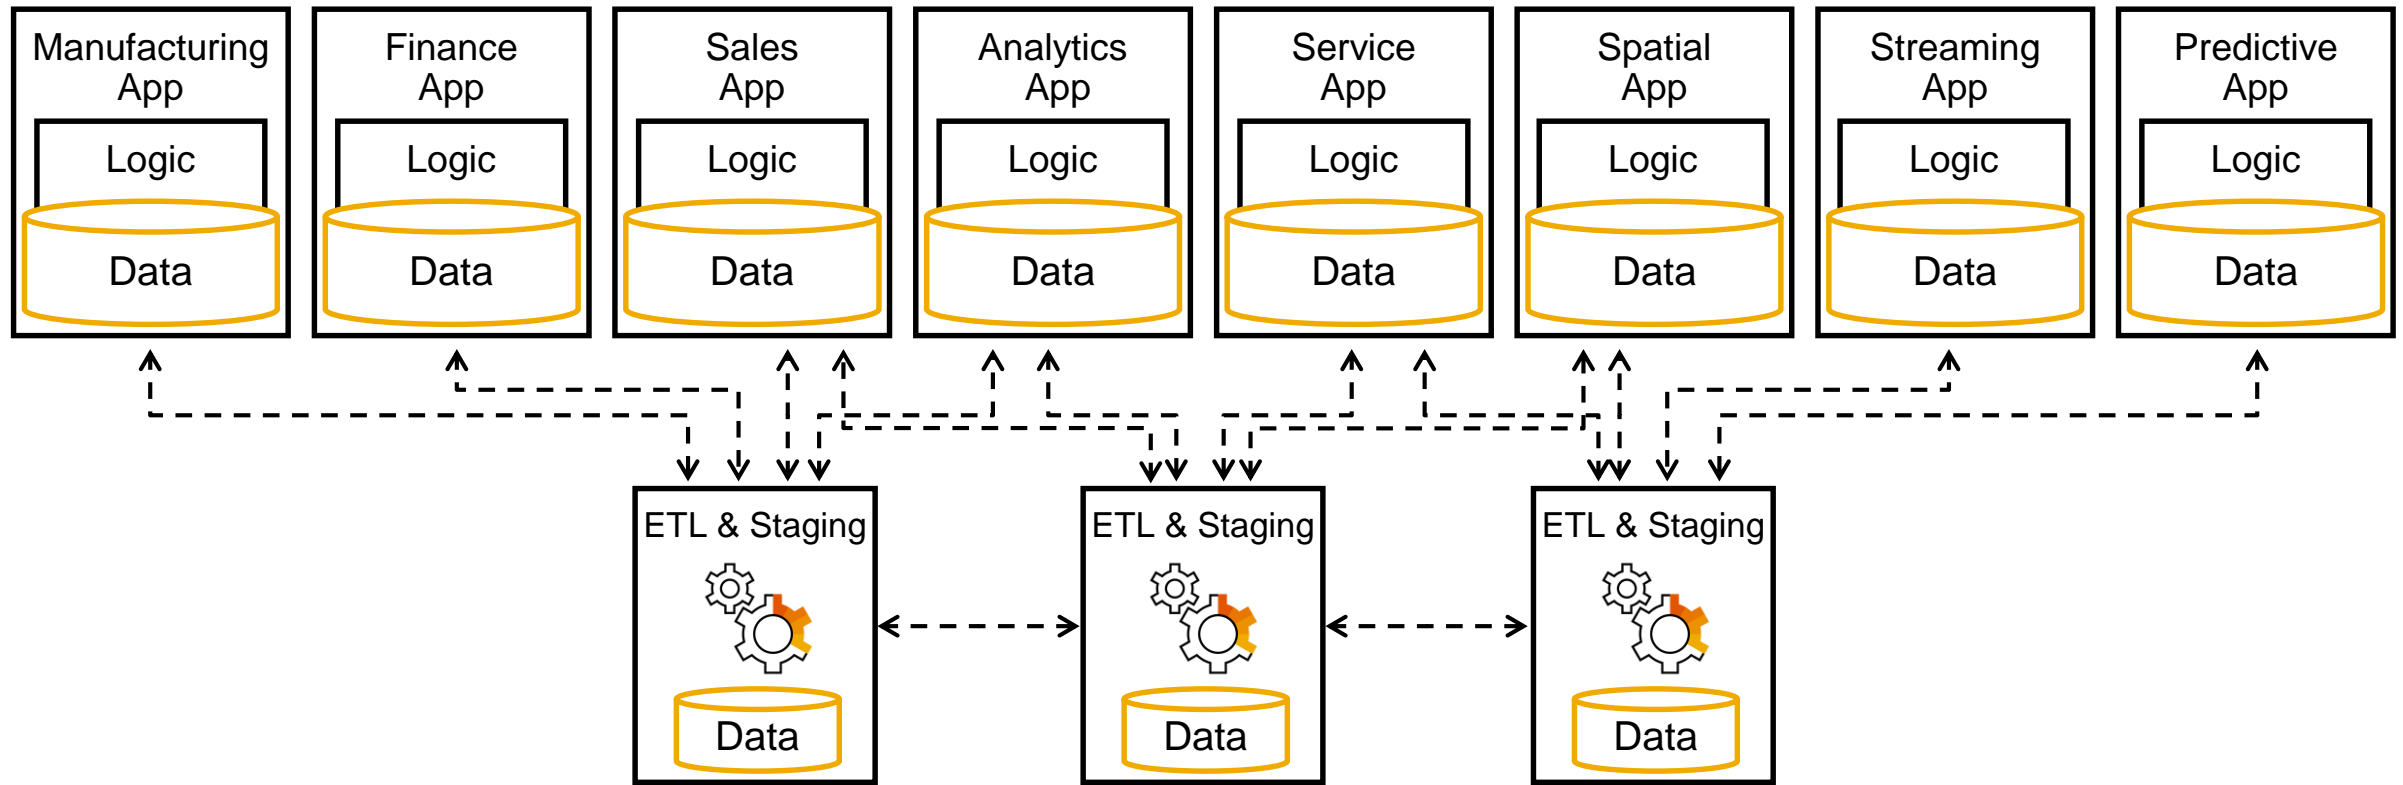

Innovate using latest technology

Innovate and run apps on single system with latest technology

The problem with current IT landscapes

Silos, delay, and complexity hinder business agility and innovation

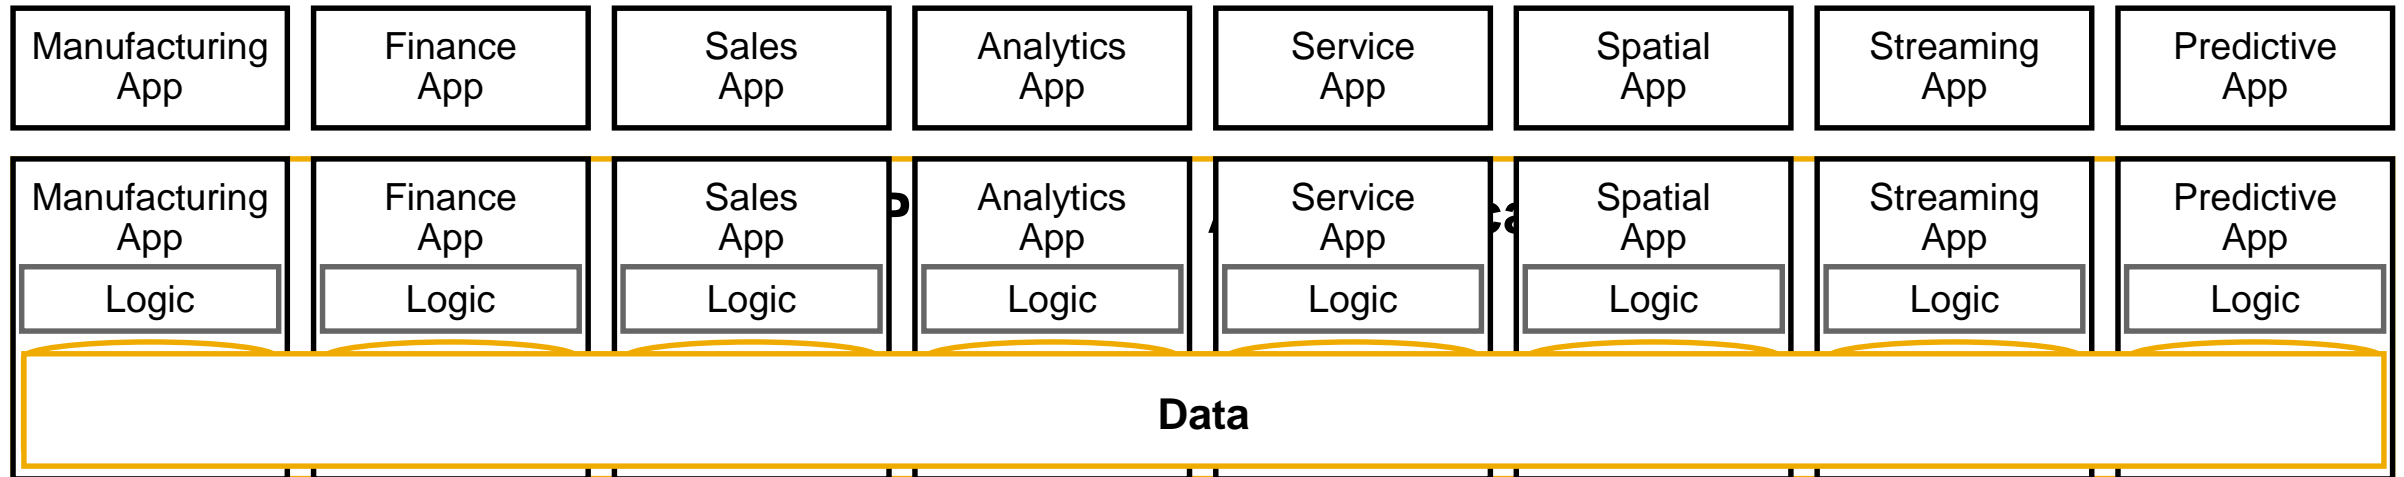

Application silos
Multiple data copies
Batch processing

Partial business view
No real-time insights
Limited ability to innovate

The solution: Make all data readily available to all applications

Reduce data movement and data latency – Improve business agility and innovation

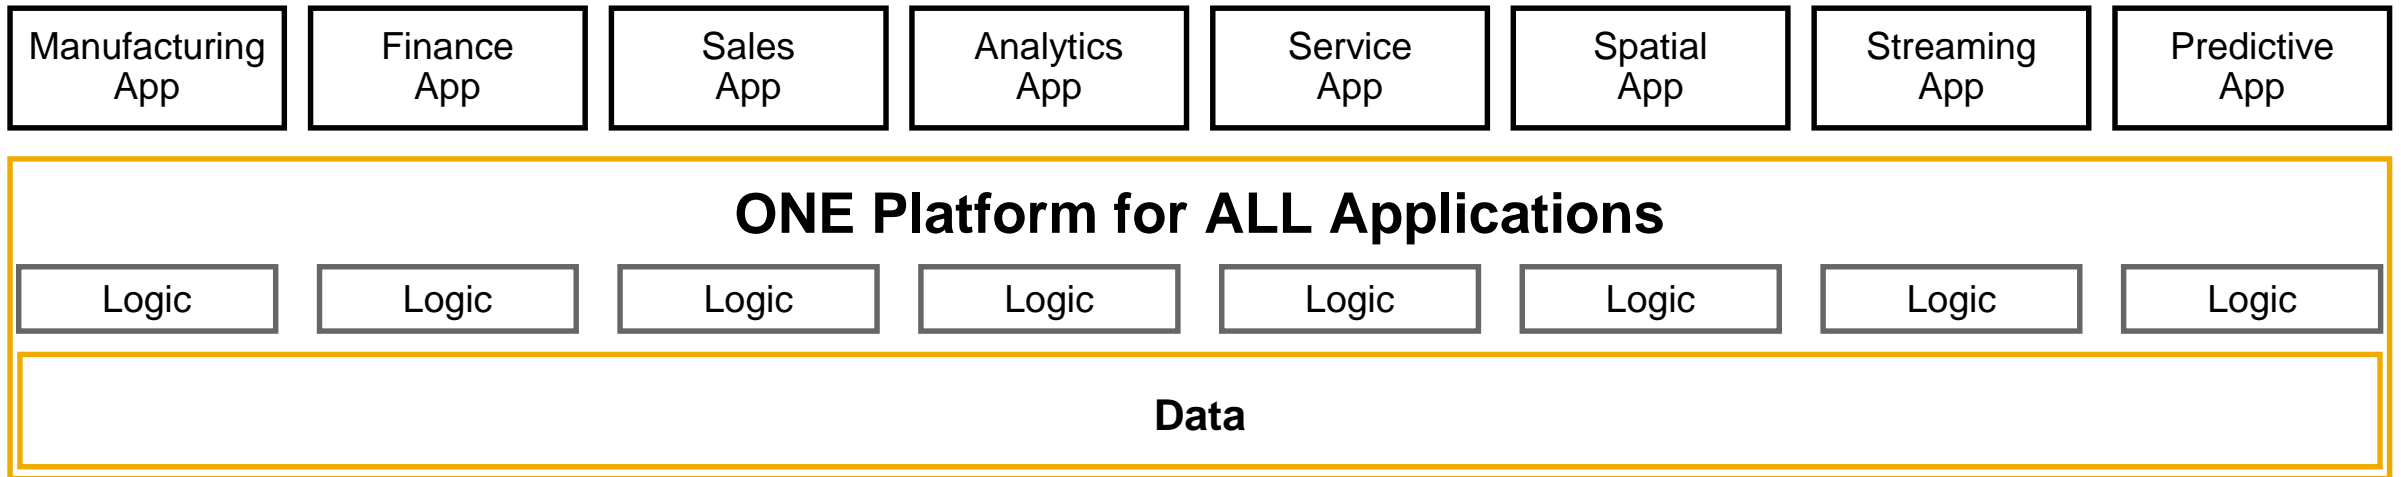

Unified application workloads
Unified data – Single copy
Real-time processes

Complete business view
Ability to react in real-time
Ability to innovate

The solution is only possible with in-memory data management

Only data in-memory enables all applications to become real-time

No waiting for data access and processing

All application logic (OLTP and OLAP) processed in one system

All data types processed in one system

Speed
Simplicity
Innovation

SAP HANA Platform

The in-memory data platform for digital business

All Devices

SAP, ISV and Custom Applications

SAP HANA PLATFORM

APPLICATION DEVELOPMENT

ADVANCED ANALYTICAL PROCESSING

DATA INTEGRATION & QUALITY

DATABASE MANAGEMENT

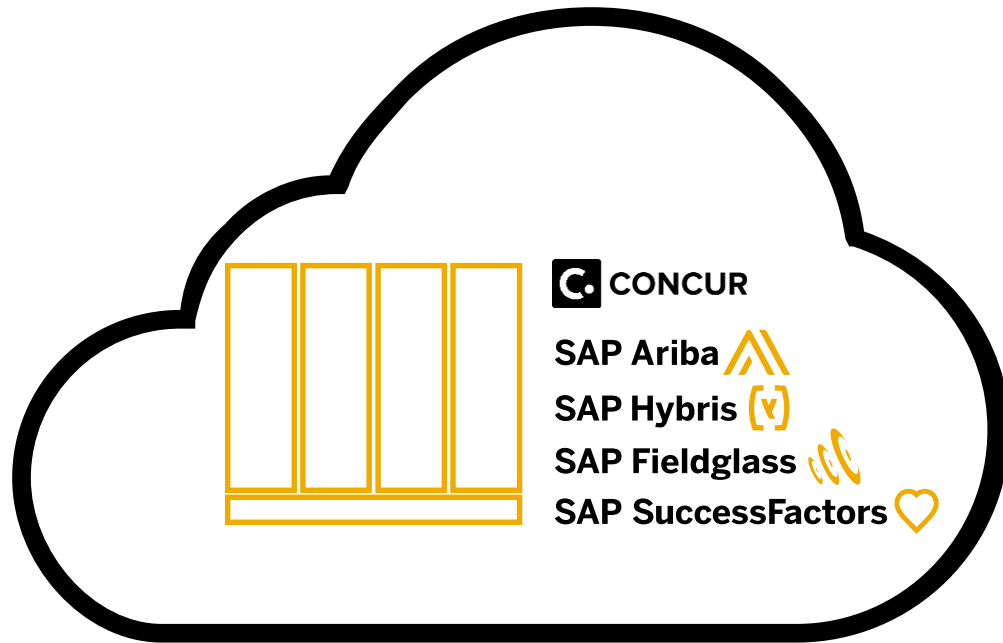

ONE Open Platform

OLTP + OLAP

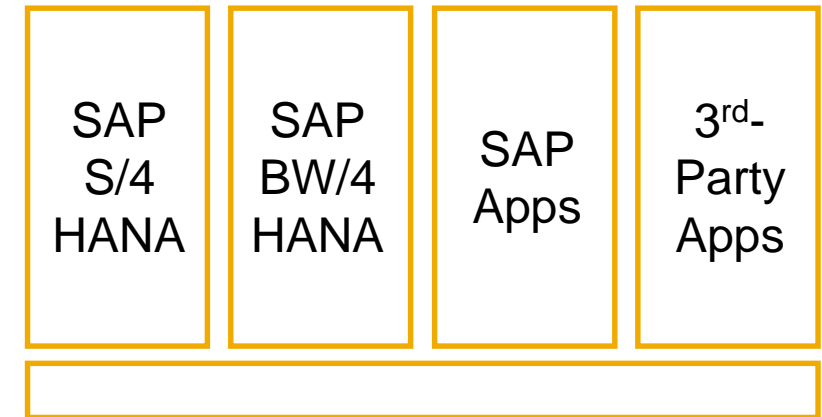

ONE Copy of the Data

Choice of deployment: Cloud and On-Premises

Cloud

Run all applications
in the cloud

On-Premises

Run all applications
on-premises

Choose the right cloud deployment option

Public Cloud

SAP HANA One

- Pay per hour for SAP HANA license
- Build native SAP HANA applications

SAP HANA on IaaS

- Bring your own SAP HANA license
- Build native SAP HANA applications and run SAP apps

Google Cloud Platform

Microsoft Azure

Managed Private Cloud

SAP HANA Enterprise Cloud

- Faster time to value with fully managed and secured cloud that offers elasticity and flexibility
- Run SAP Business Suite and SAP BW powered by SAP HANA and custom applications on SAP HANA
- Deliver maximum performance, security, high availability, and disaster recovery

Platform-as-a-Service

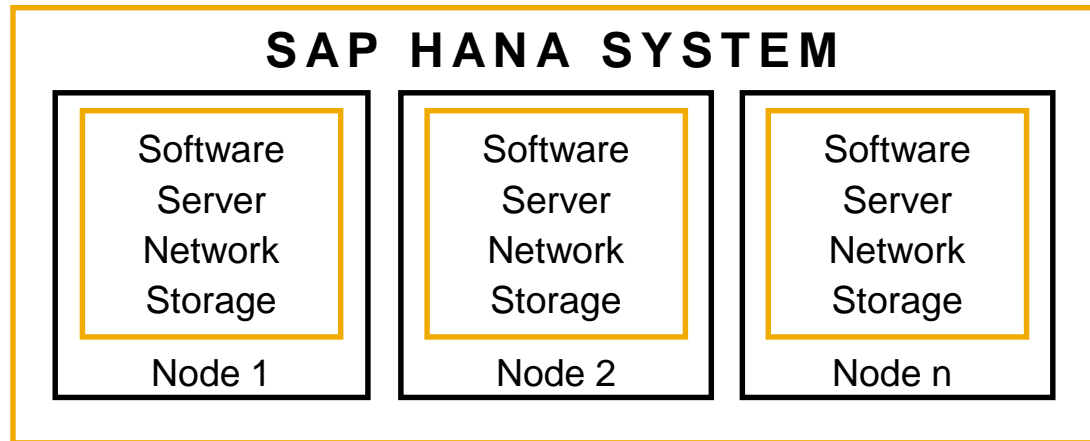

SAP Cloud Platform

- Open platform-as-a-service with in-memory DB and application services
- Build new applications or extend SAP cloud and on-premises applications
- Integrate cloud and on-premises applications seamlessly and securely
- Create, deploy, and manage enterprise-ready mobile applications

[SAP certified IaaS providers](#)

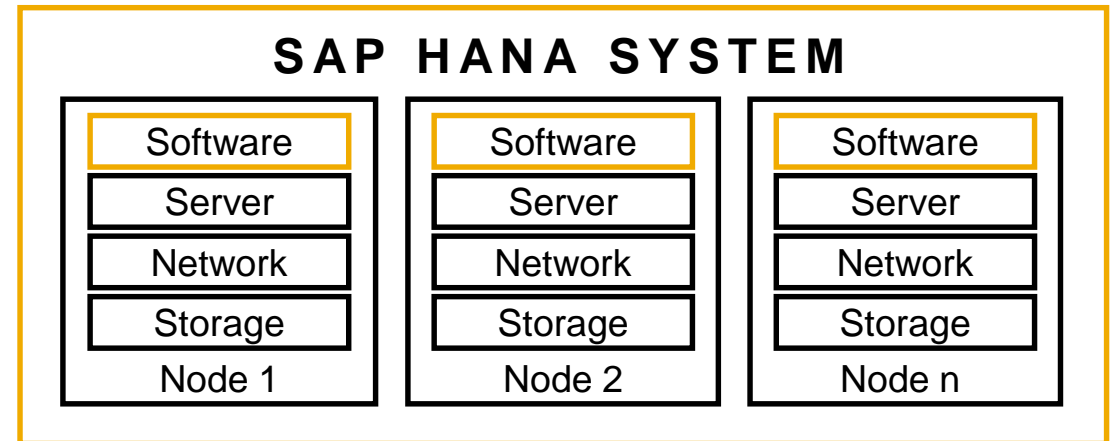

Choose the right on-premises deployment option

Appliance

All-in-one box by certified partners
(1,100+ configurations – 64 GB to 20 TB)

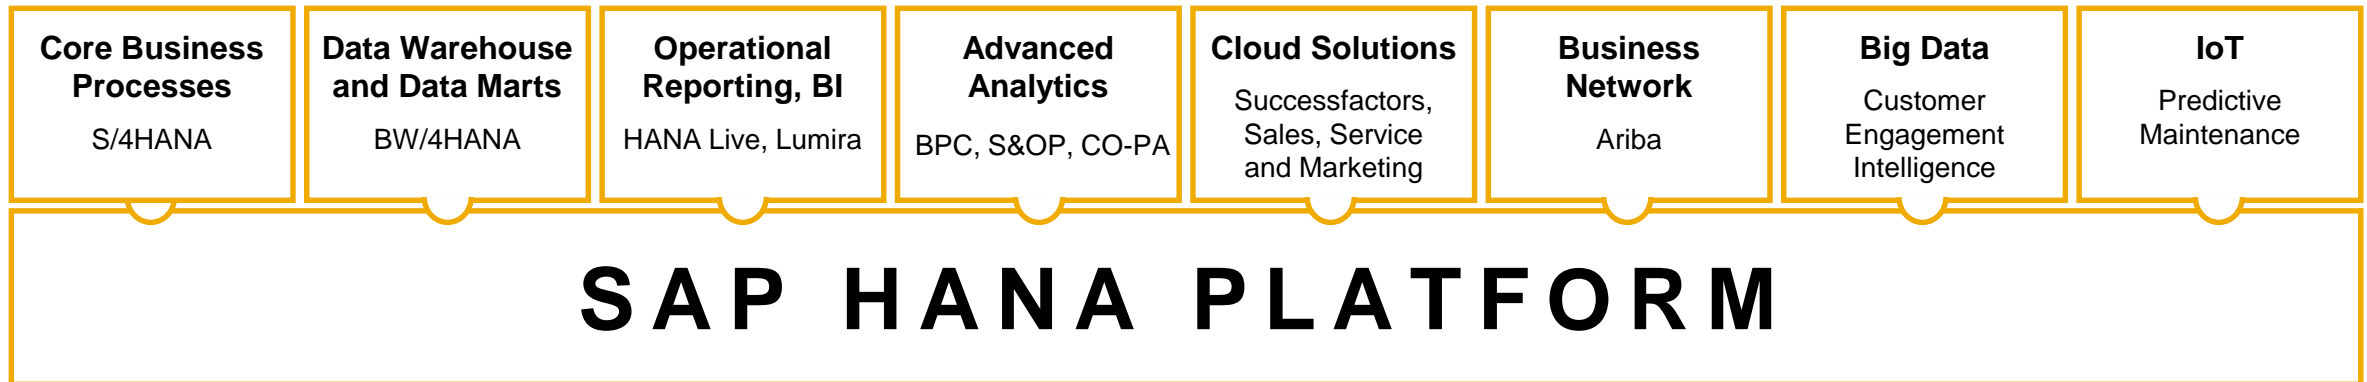

Tailored Data Center Integration

Choice of components that meet SAP
requirements from different vendors

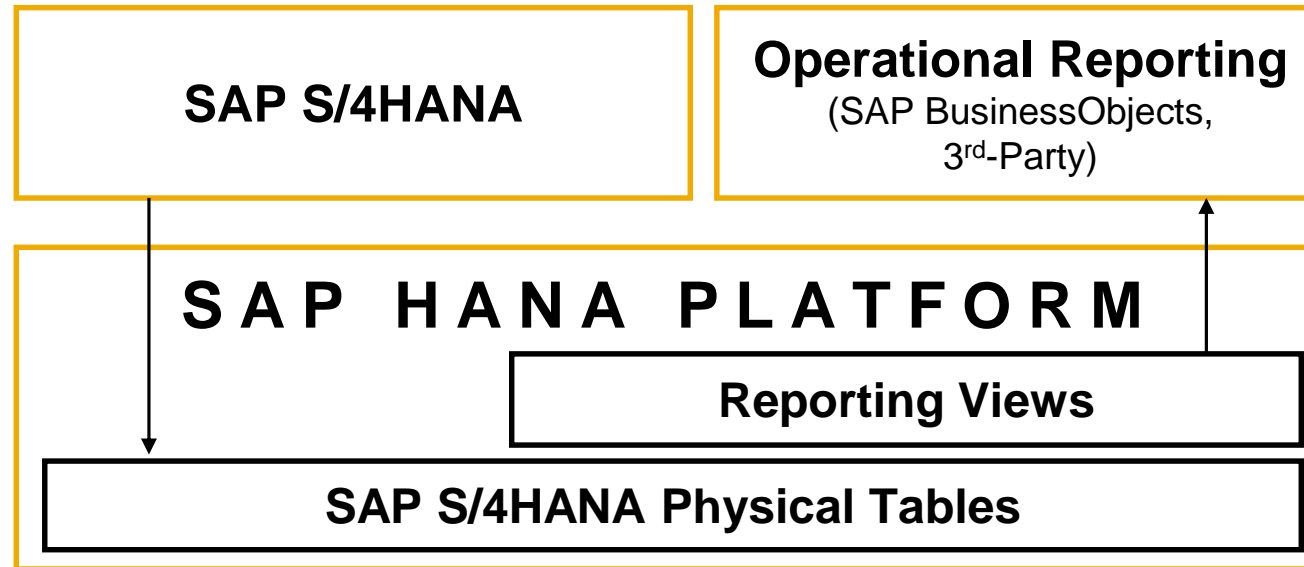

All SAP applications run better on SAP HANA Platform

SAP HANA is central to SAP strategy

- Every product from SAP already runs in/will soon be optimized for SAP HANA
- SAP HANA powers both on-premises and cloud applications
- SAP HANA enables managed private cloud (SAP HANA Enterprise Cloud) and SAP Platform-as-a-Service (SAP Cloud Platform)
- SAP HANA is available in third-party public clouds (Amazon AWS, Microsoft Azure, Google Cloud Platform, Huawei, IBM Bluemix)

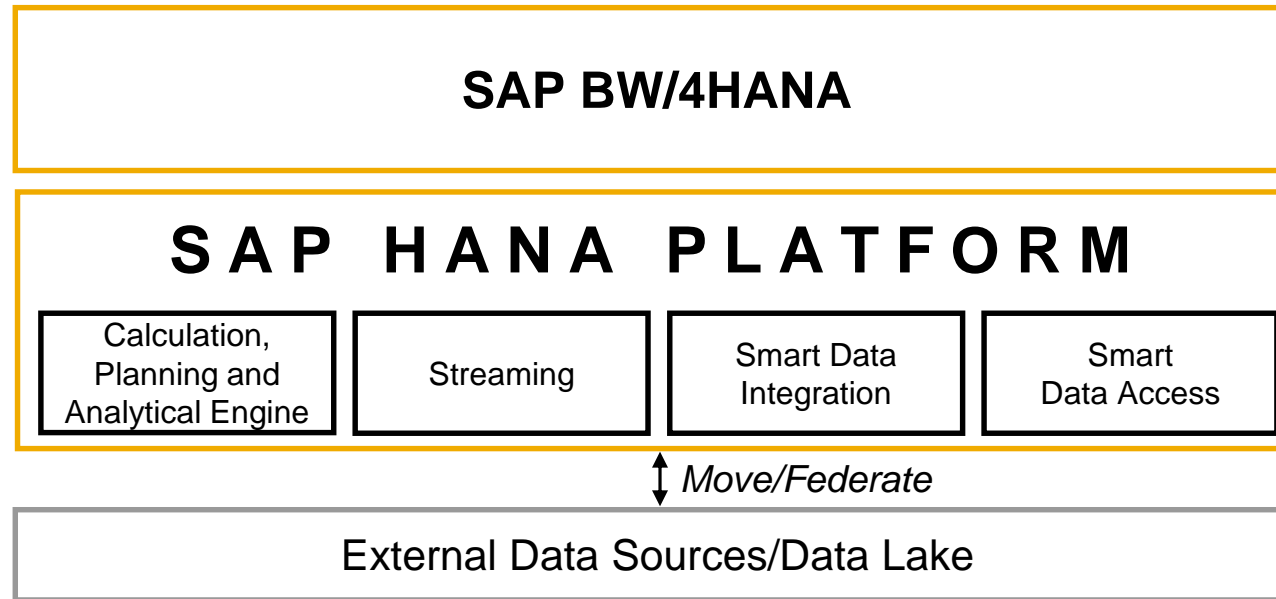

Run core business processes and operational reporting on SAP HANA Platform

- Simplified user interface
- Simplified data model – No data redundancies, no data duplication
- Real-time operational reporting on fresh data with 2,000+ views
- Faster response time – Data intensive business logic run inside SAP HANA

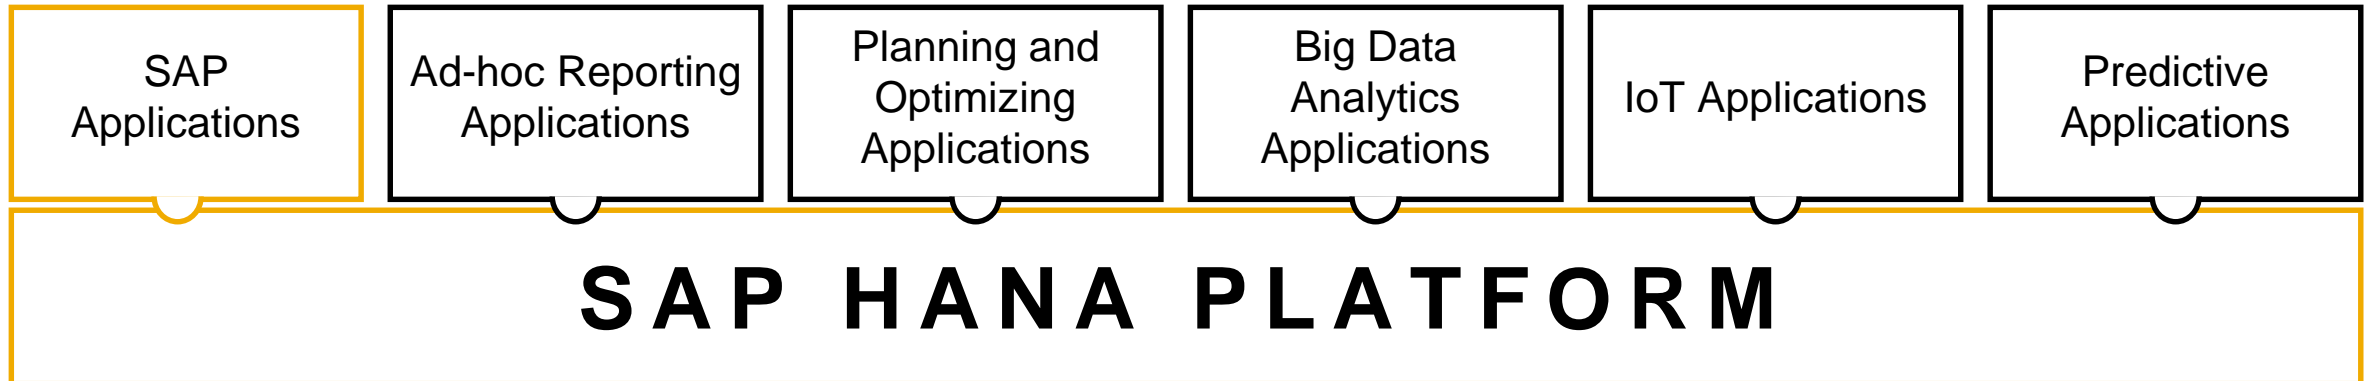

Run SAP BW/4HANA

Gain real-time insights from any data in your enterprise

- Simplified data structures, data flows, and data integration from many sources
- Modern user interface for business users, modelers, and administrators
- Delivers high performance with in-memory speed, calculation pushdown, and built-in advanced analytics
- Supports unlimited data volumes with built-in data lifecycle management
- Allows access to SAP BW/4HANA objects and logic with native SQL in SAP HANA
- Available on-premises or in the cloud

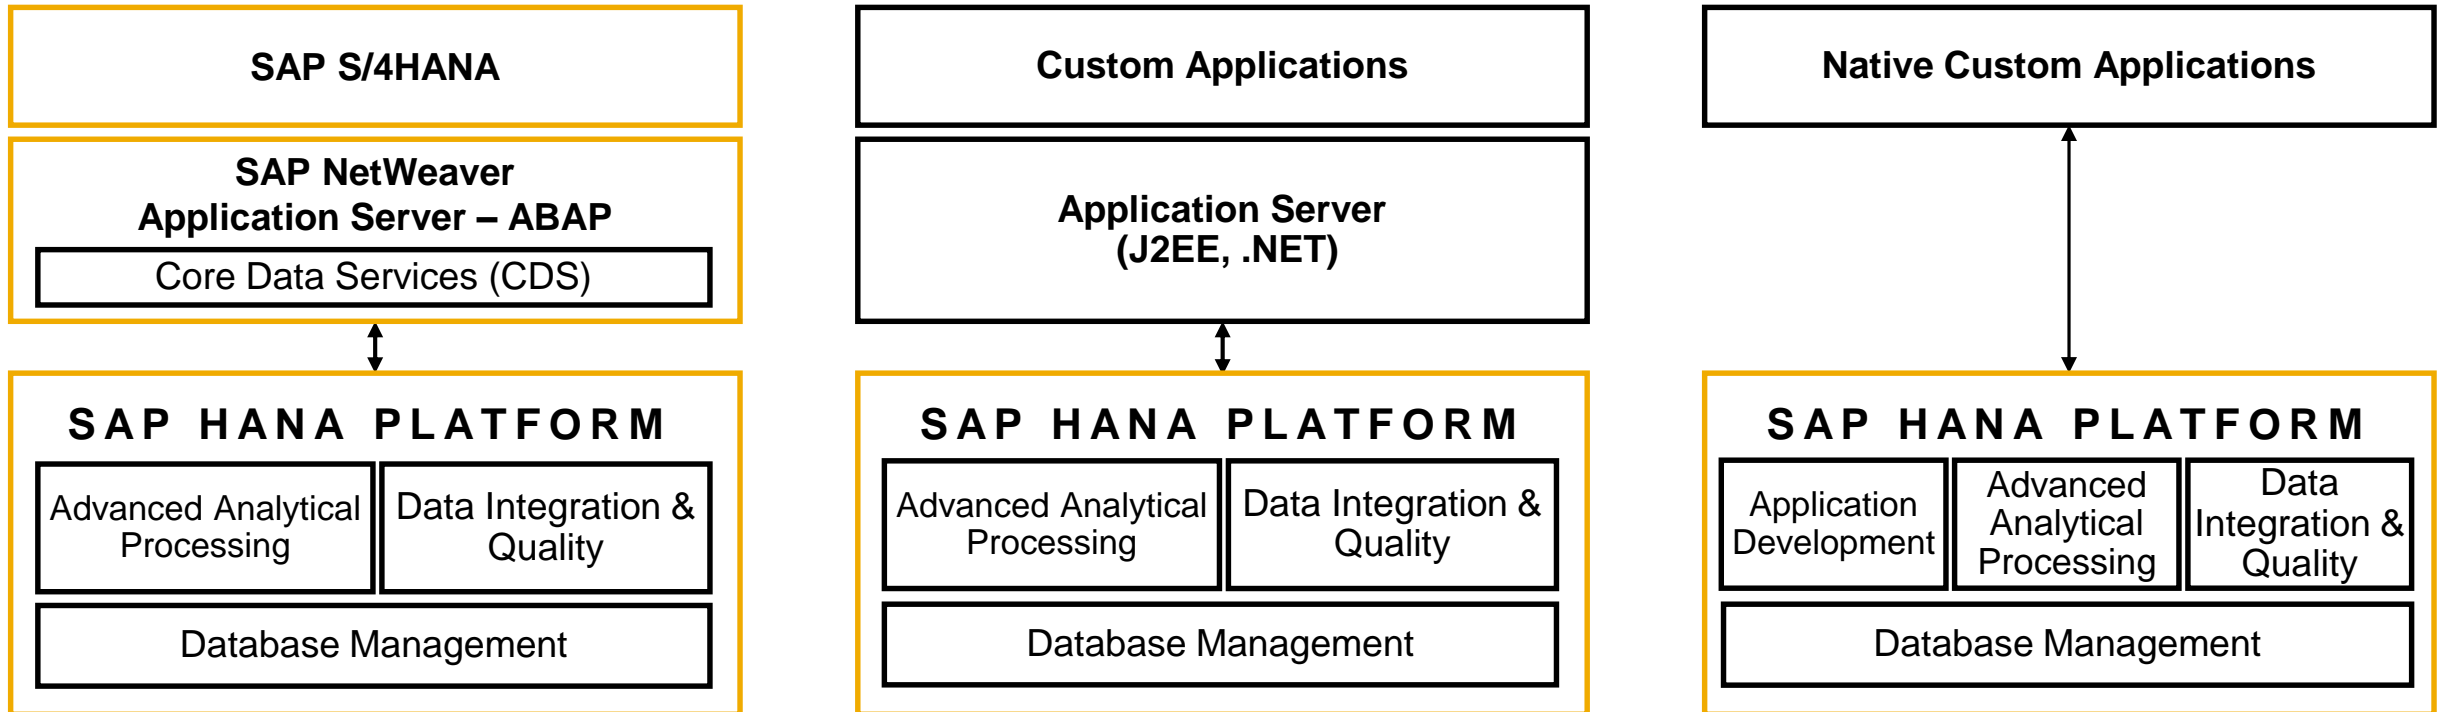

Build value-added applications on SAP HANA Platform

- Build custom applications for unique business needs leveraging SAP and non-SAP data
- Accelerate application development with prepackaged business functions and algorithms
- Build beautiful user interfaces with SAP Fiori framework, and access from any device

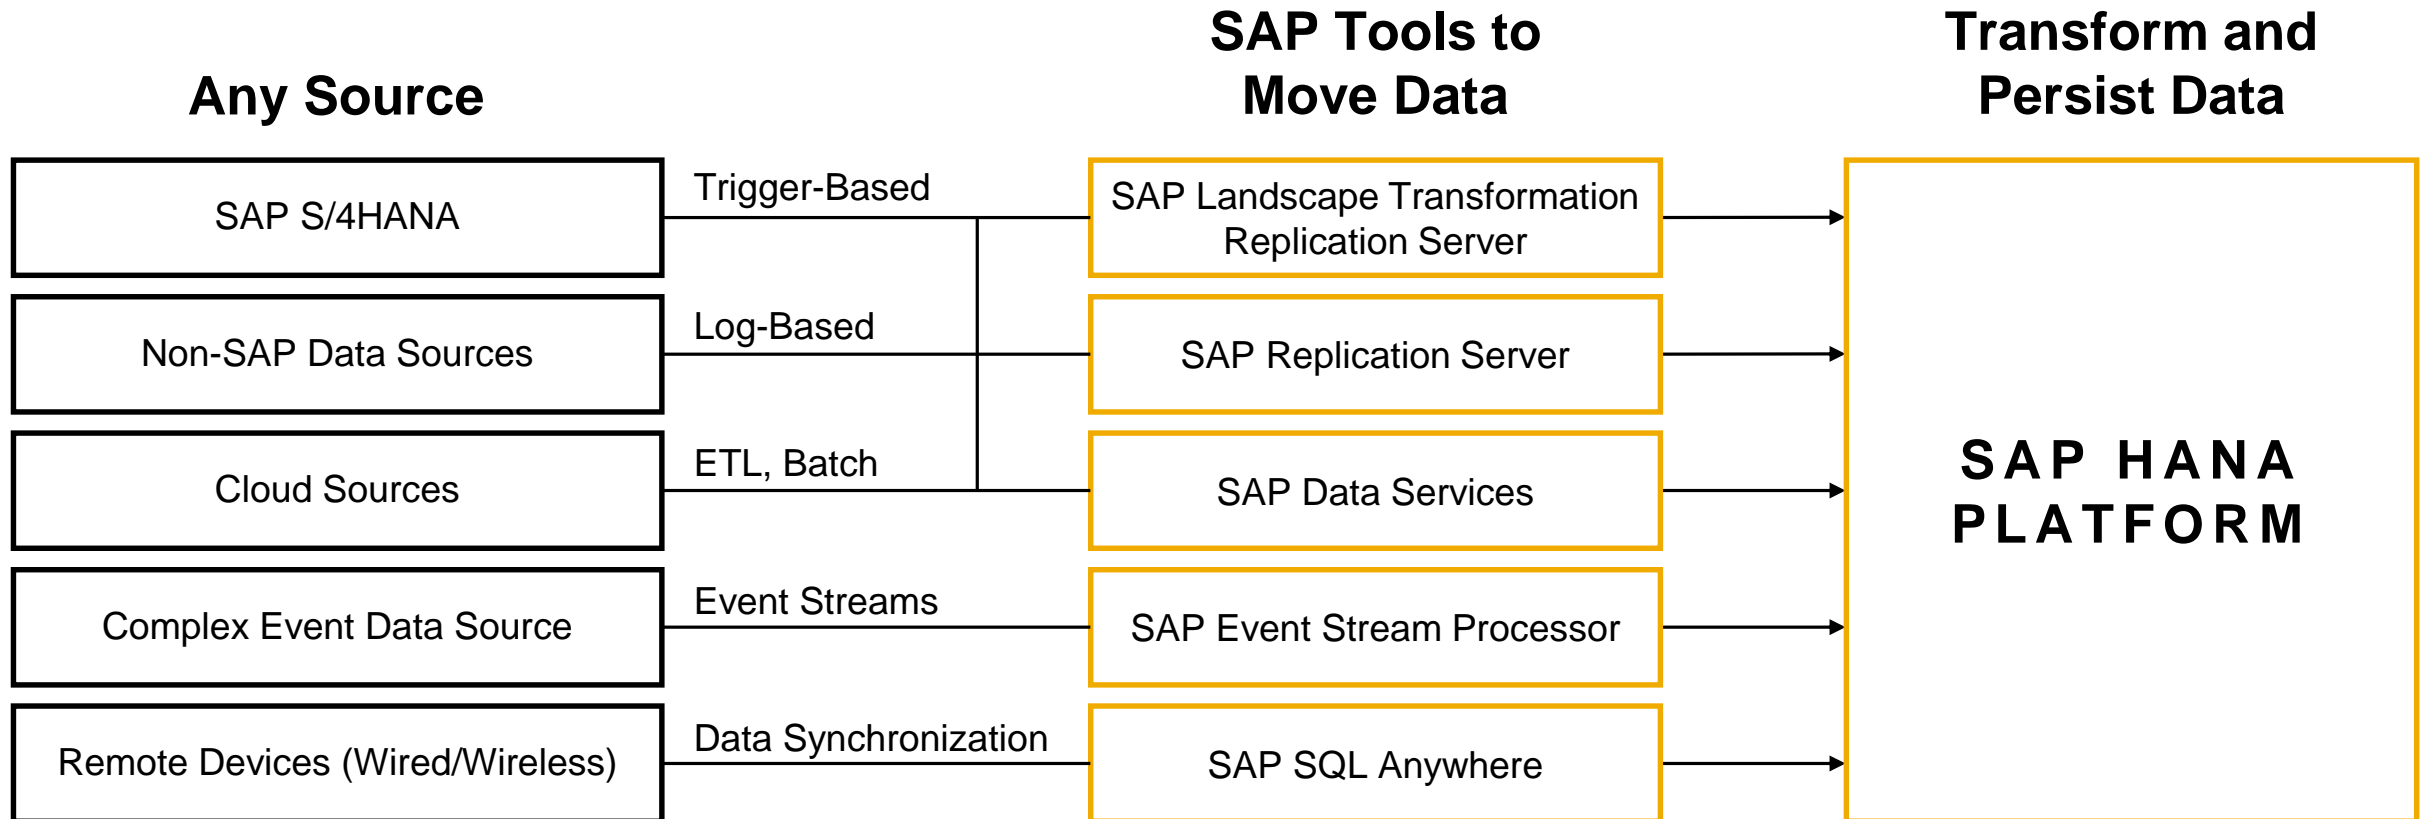

Choice of application architecture

Leverage existing assets and skills

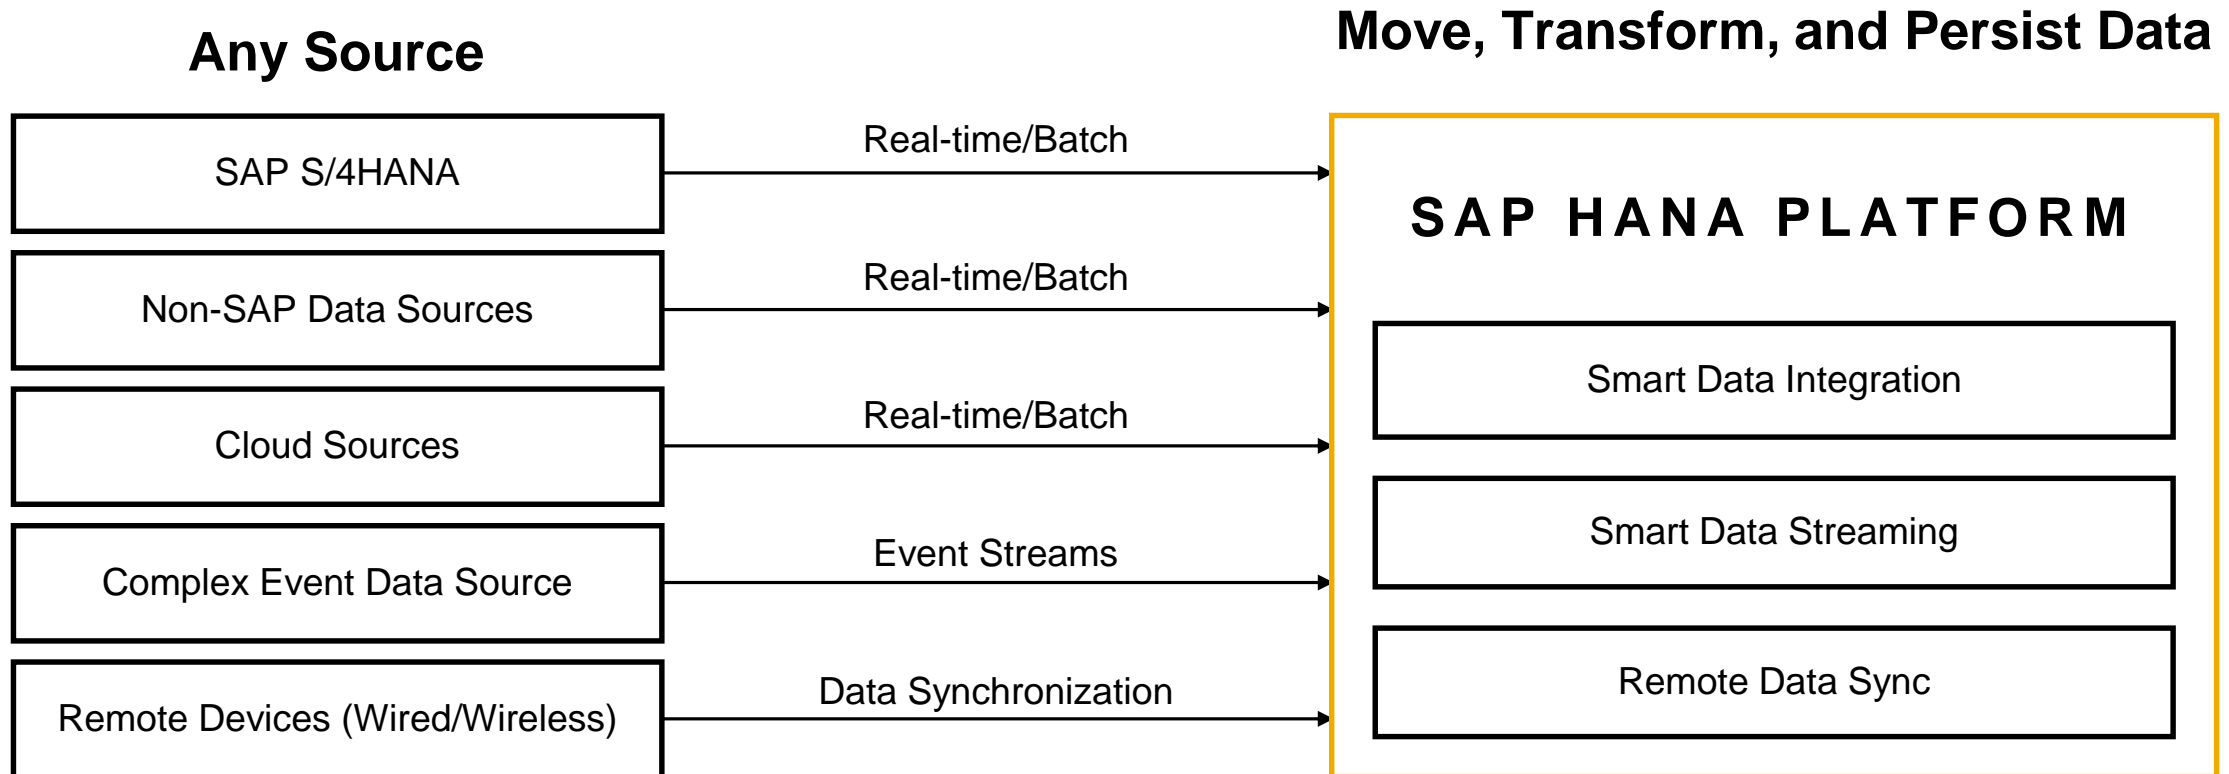

- ABAP developers use CDS and Open SQL to leverage SAP HANA without coding SAP HANA objects
- Custom application developers choose any application server and any database interface
- SAP HANA-native application developers use SAP HANA application server inside the platform

Traditional data integration solutions

SAP HANA Platform: Integration services

Simplification thru native data integration solutions

SAP HANA Platform common use cases

Optimizing Business Operations

Get instant insights into real-time transactions to optimize business operations

Operational Reports, Dashboards, and Analytics

Analyze and visualize operational details to support your day-to-day activities

Real-time Operational Intelligence

Run queries against operational data, streams, and events to deliver real-time insights

Data Warehouse and Data Mart

Deliver actionable insights on enterprise-wide or departmental data

Big Data

Uncover the value in large, complex, and rapidly growing data sets

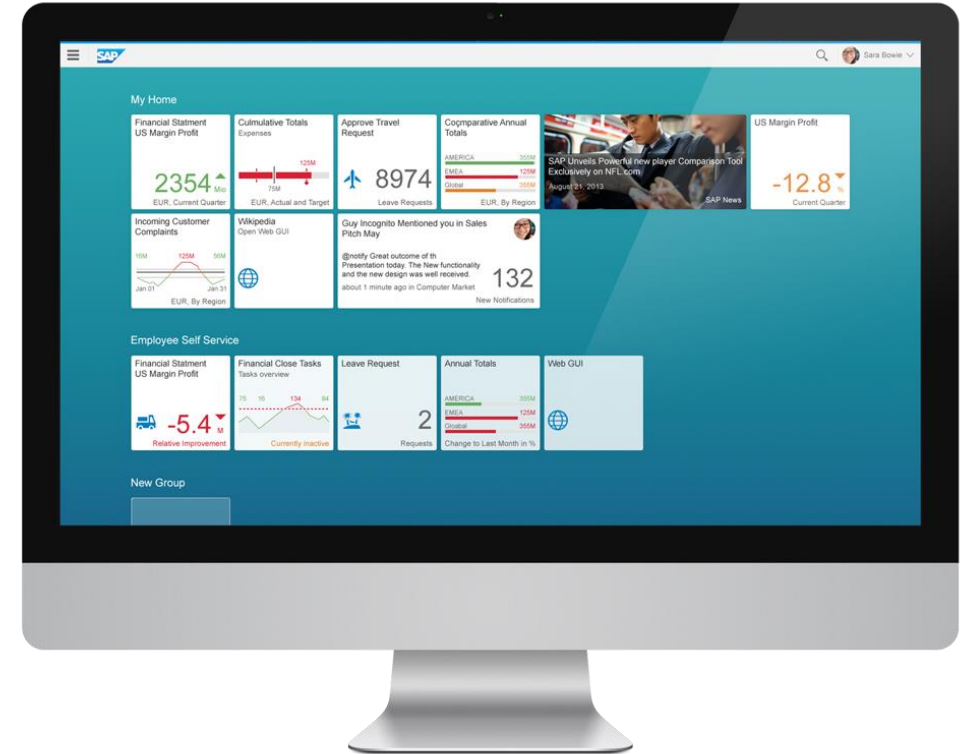

Decision Support, Simulation, and Automation

Streamline and automate business processes with advanced analytics

Introducing SAP HANA, express edition

Build applications from anywhere

- Streamlined version of SAP HANA optimized for fast and continuous application development
- Available for download on a laptop, personal computer, server, or available in the cloud for flexible development and deployment options
- Offered for free, enabling you to try and innovate next-generation applications

Try Express Edition for free

SAP HANA 2.0 SPS 02

new enhancements included in the latest service pack stack

SPS 02: Database Enhancements

High availability and disaster recovery (HA/DR)

- Gain flexibility with the ability to copy/move tenant databases across different multi-tenant environments while system replication is still running.
- Expand your SAP HANA high availability landscape with the flexibility to deploy multi-tier system replication chains - beyond 2 secondary systems.
- Simplify active/active, read-enabled access to your data assets through a closer integration with cluster managers.

Administration and Monitoring

- Improve efficiency and productivity by assigning administrators to specific user groups and taking advantage of a simplified way to manage user groups, encryption, and database copies within the SAP HANA Cockpit.
- Enforce best practices across your landscapes by applying standard parameters across SAP HANA systems for centralized control.

Workload Management

- Reduce administration efforts and ensure that important workloads get appropriate resources with SAP HANA's ability to automatically manage incoming database requests according to assigned priorities and enforce limits on the cumulative memory and CPU resources that each user / application / workload class consumes.

SAP HANA 2.0 SPS 02

new enhancements included in the latest service pack stack

SPS 02: Advanced Analytics Processing

Predictive Analytics and Machine Learning

- Empower users with smarter recommendations from fresh intelligence with a broader support for real-time scoring and with integration to external machine learning frameworks - now including Tensorflow™.
- Accelerate predictive application development with a simplified way to invoke algorithms and the ability to use SAP Web IDE for SAP HANA for developing predictive and machine learning models using SAP HANA Predictive Analytics Libraries (PAL).

Text Analysis, Graph and Geospatial data processing

- Speed up the deployment of text analysis assets with a simplified end-to-end process all managed through SAP Web IDE for SAP HANA - now including the custom configuration for different data domains and the automatic generation of language-specific inflections for custom dictionaries.
- Gain faster insight from your connected data sets with new GraphScript extensions to facilitate navigation and manipulations of sub-graphs, inverted graphs, and more.
- Increase the accuracy and depth of insight from geospatial data with improved validation of geometric objects.

SAP HANA 2.0 SPS 02

new enhancements included in the latest service pack stack

SPS 02: Application Development and Tools Enhancements

Tools and languages

- Innovate faster with new and enhanced SQLScript and SQL functions, simplified XML and JSON document handling, and more efficient support for SQL hierarchies.
- Streamline application development with a more efficient Python driver and a newly released Go driver.

SAP HANA, express edition

- Get instant access to a modern data platform to develop real-time applications that combine analytics and transactions on any data, at no cost with SAP HANA express edition – now featuring high-speed data provisioning, bulk data movement, and federation through SAP HANA smart data integration.

SAP HANA 2.0 SPS 02

new enhancements included in the latest service pack stack

SPS 02: Data Management Enhancements

Enterprise landscape management

- Simplify data and process management across your enterprise landscape with SAP Enterprise Architecture Designer Edition for SAP HANA. Now you can import models from SAP Solution Manager, represent native Datastore Objects, and deliver a comprehensive data movement view across data sources and targets.

Multi-tier storage

- Enhance system availability and deliver continuous access to all your data with the support for 2-tier and 3-tier system replication in SAP HANA dynamic tiering.
- Gain instant access to the data your business needs at a lower cost with faster data transfers from extended stores to memory, and a simplified management through enhanced diagnostic tracing and troubleshooting.

Data integration and federation

- Get a broader view of your business with an improved integration of external data sources that brings increased performance for data provisioning adapters and a simplified configuration for third-party databases adapters.
- Streamline the setup and management of federated data access to remote sources with the automatic creation of virtual tables, and ensure the continuous access to remote data with automatic system failover.
