SAP Connected Goods | Connecting Extended Enterprise Edge to Digital Core

Discovering the Value Scenarios at Your Customers

SAP Connected Goods | Customer Examples

Optimize Connected Coolers

Customer Profile

Industry: Consumer Goods

Company: Beverage Producers

Business Drivers

- Maximize sales with fast inventory replenishment
- Place coolers in highest yielding locations
- Reduce product spoilage
- Increase customer satisfaction by delivering a consistent experience
- Reduce losses due to cooler theft

Capabilities

- Enable real-time inventory replenishment
- Geo-location monitoring
- Optimal beverage storage condition monitoring
- Insights to determine optimal cooler location
- Real-time beverage consumption insights

Outcome

- LIVE with SAP Connected Goods in March 2017
- More selling moments per cooler per year as a result

Optimize Usage, Monitoring and Traceability of Construction Tools

Customer Profile

Industry: Engineering & Construction

Company: Tool Manufacturer/Construction companies

Business Drivers

- Create new business model of Pay Per Use (“as a Service”)
- Reduce the use of non-certified drilling heads by customers
- Reduce lost or stolen equipment on construction sites
- Automate the dispatch of construction tools from central warehouses

Capabilities

- Monitor tool usage to enable pay-per-use
- Remotely block stolen or missed tools
- Geo-location monitoring
- Validate delivery of the correct tool to remote sites

Benefits

- Achieve real-time transparency on last-known locations of assets
- Support geo-fencing based alerts and notifications
- Enable immediate investigation for lost assets using location history
- Receive low-battery alerts for in-use assets

SAP Leonardo IoT Connected Assets

January 2018

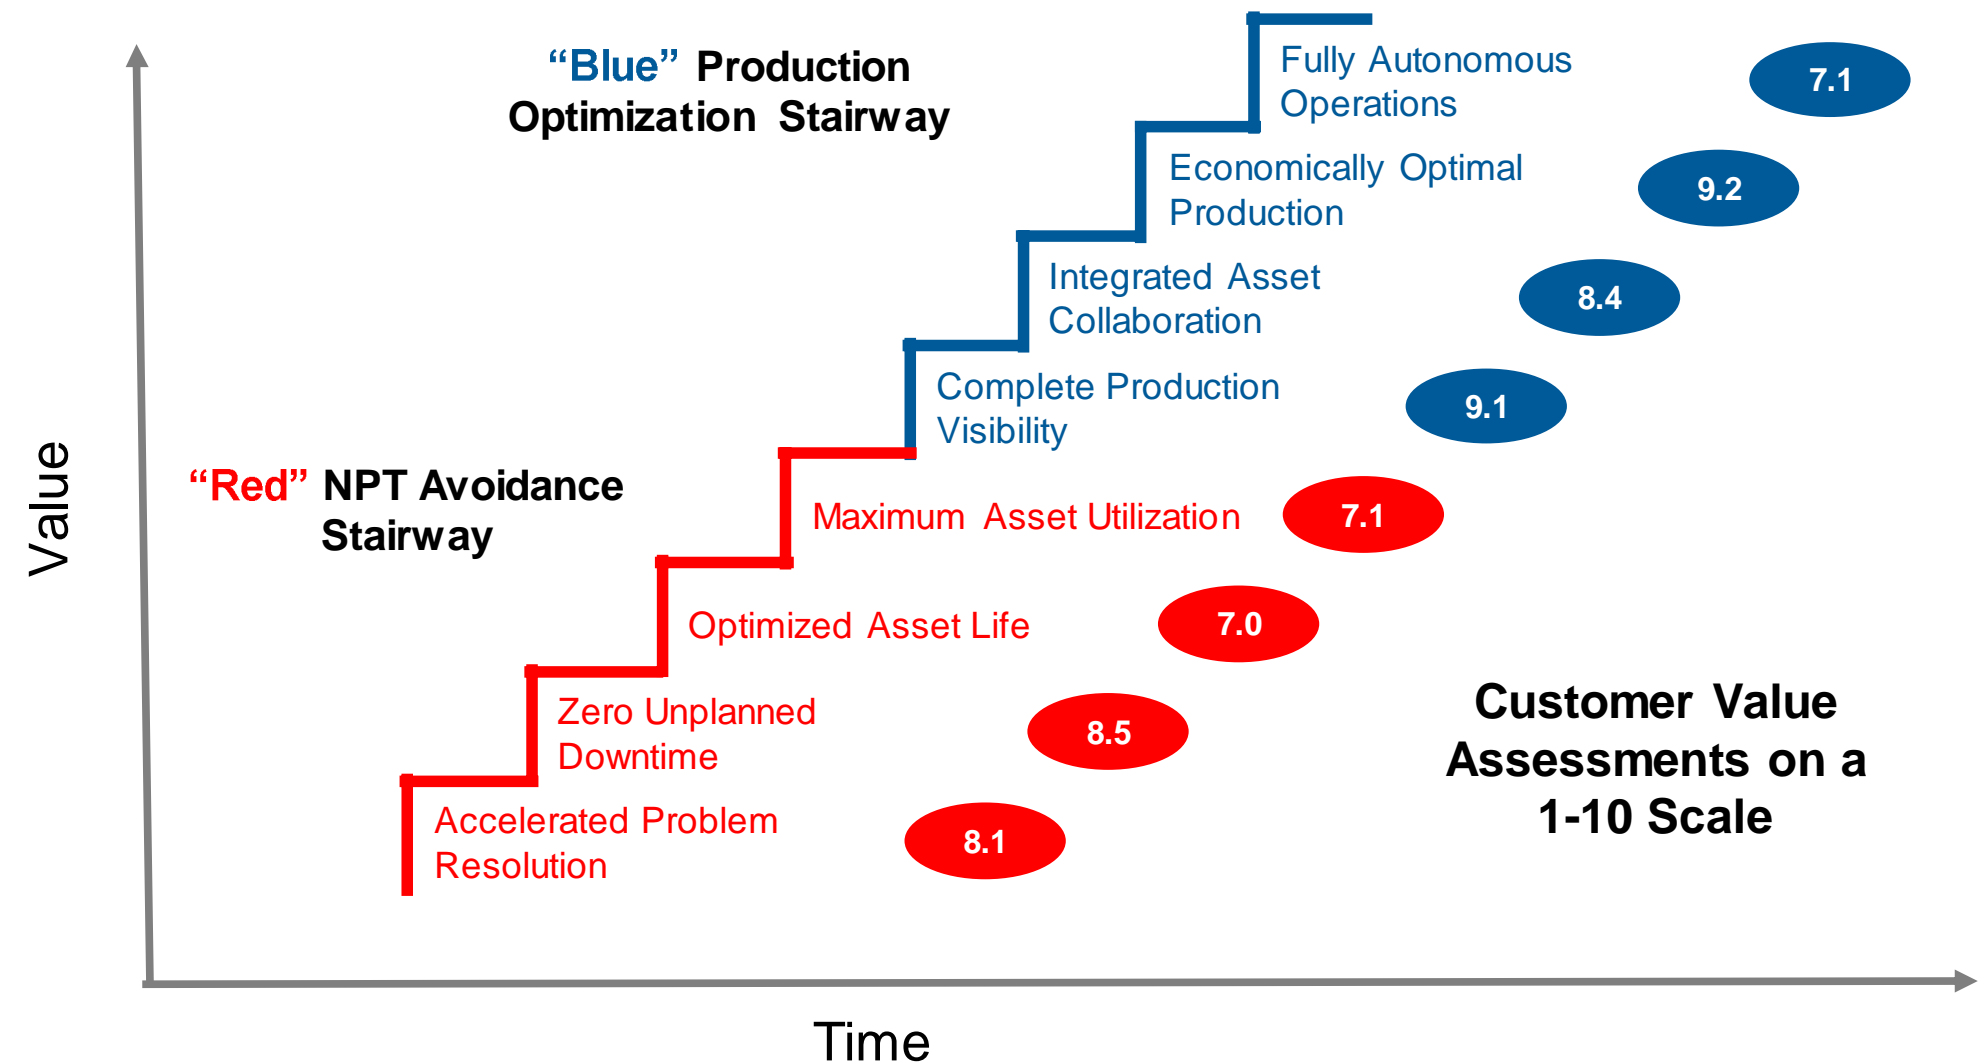

Connected Assets

- Connect, monitor and tightly control manufacturing equipment
- Optimize manufacturing, product quality, and asset performance throughout its lifecycle
- Manage a network of assets to identify and resolve issues before they happen

Digital Innovation: **System of Innovation**

SAP Leonardo IoT
for Asset Management

*Planned

An architecture built for next generation Enterprise Asset Management

Digital Core

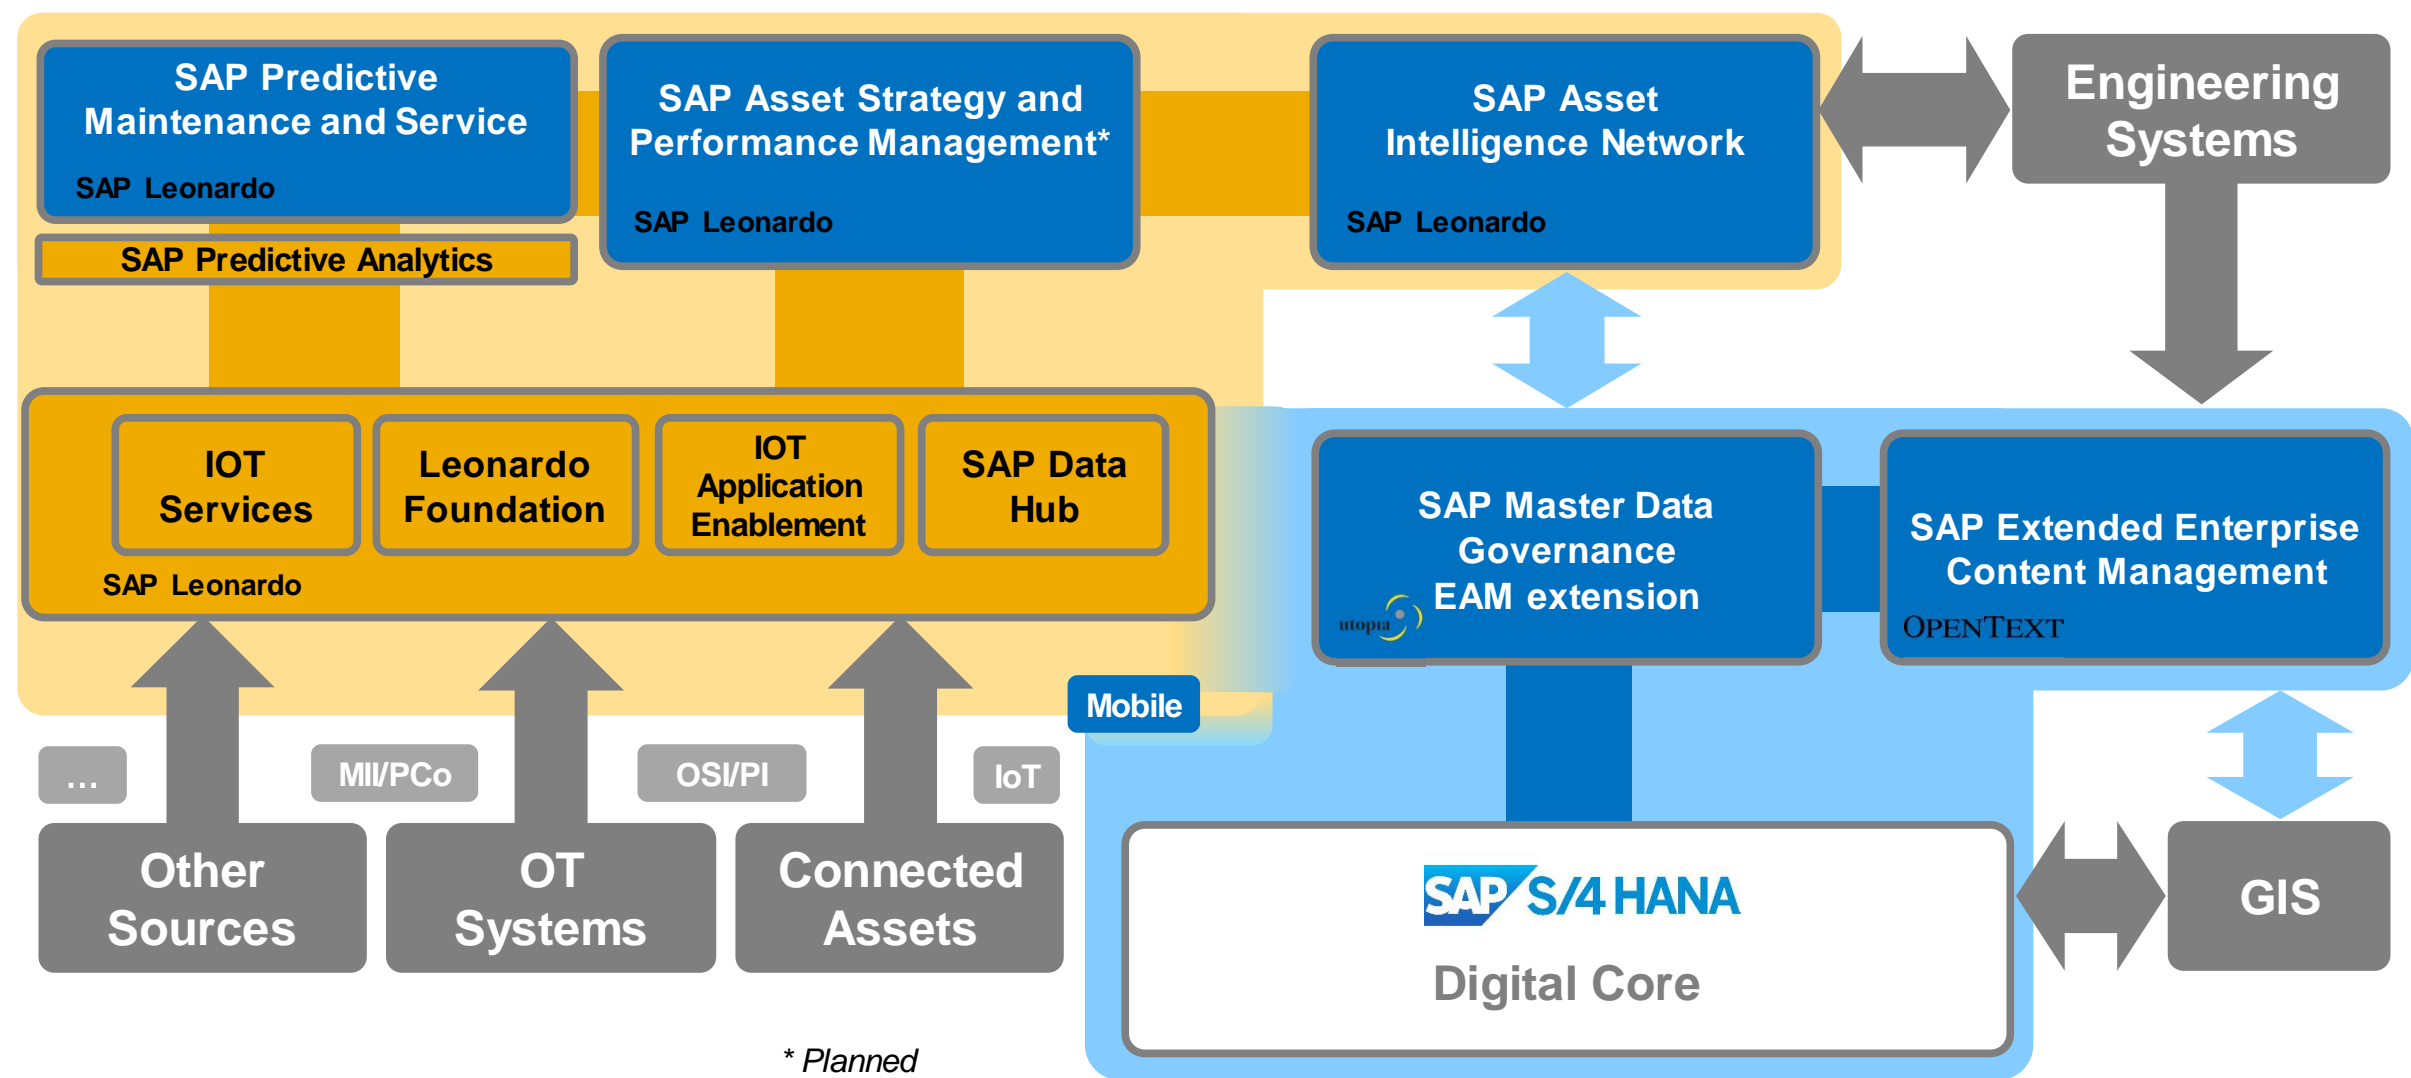

Corrective, emergency and preventive maintenance **planning & execution** via notification and order processing in an integrated system

Digital Innovation

- **Asset Central** – Provides a re-usable asset registry across IoT applications for seamless integration and data consistency
- **SAP Asset Intelligence Network**
Collaborative asset management bringing key stakeholders (operator, OEM, service providers, ...) together in a digital ecosystem solving complex execution, predictive and planning activities with centrally managed asset information
- **SAP Predictive Maintenance and Service**
Enables enhanced **predictive maintenance** techniques to optimize EAM business processes for greater asset availability and reduced cost
- **SAP Asset Strategy and Performance Management***
Define and **plan** maintenance execution strategies holistically (insight/foresight; insights from network) for improved performance
- **SAP Predictive Engineering Insights**
Model and visualize the **physical** structure of an asset for real-time calculation of stress and fatigue to drive predictions

SAP IoT for Digital Manufacturing

January 2018

Digital Innovation for Manufacturing Execution & Industrial Analytics

“**Process Driven Analytics** to
Drive Process Improvements”

SAP DISTRIBUTED MANUFACTURING

...provides a cloud-based collaborative platform that connects customers with (additive) manufacturing service providers, e.g., suppliers of 3D printing services, material providers, original equipment manufacturers (OEM), and technical certification companies.

Key Capabilities

- Collaboration between customers and service providers on design optimization, quality and pricing
- Technical and economical part assessment by customers
- Integration with S/4HANA Cloud for sourcing and procurement
- Service offering advertisement by service providers
- Extensibility to enable scenarios specific to domains, customers or service providers.

The image displays two screenshots of the SAP Distributed Manufacturing interface. The left screenshot shows a 3D model of a part with a red bounding box highlighting a specific area. The right screenshot shows a 'Parts Analysis' table for 'CBD: Part Evaluation for Additive MFG'.

SAP ENVIRONMENT HEALTH AND SAFETY

....takes a holistic, integrated approach to embed safety, compliance, and risk management into all of your operations. It is unmatched in its capabilities to deliver real-time insight to all levels of the organization, leveraging a robust set of transactional and analytics tools.

Key Capabilities

- Track the full lifecycle of all types of incidents from initial reporting to investigation to corrective actions
- Risk Assessment lifecycle from hazard identification, impact assessment, risk ranking, and application of controls
- Mobile and offline options for reporting incidents and safety hazards, supporting a proactive safety culture
- Repository and task tracking for all regulatory, permit, and policy requirements
- Direct integration to Human Resources data, Asset Management, Finance, and other key enterprise processes
- Realtime analytics tools within the EHS processes and also integrated with the rest of the enterprise

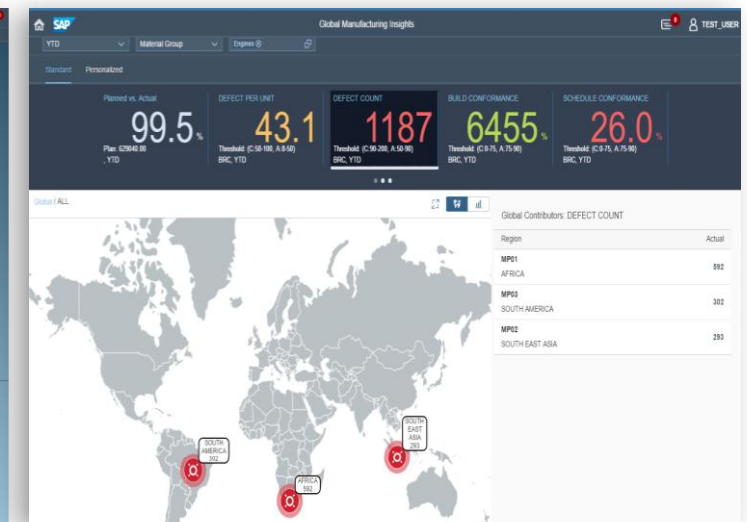

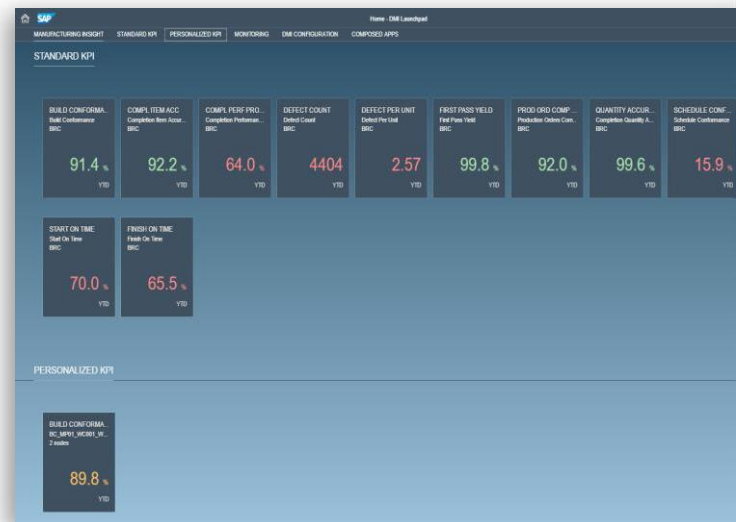

SAP DIGITAL MANUFACTURING INSIGHTS

....is a centralized, cloud-based, data-driven manufacturing performance management solution which enables key stakeholders of manufacturing operations to take tactical and strategic decisions to achieve best-in-class manufacturing performance.

Key Capabilities

- Analyze manufacturing performance within and across manufacturing plants of an enterprise
- Data acquisition from multiple disparate manufacturing application and harmonization of manufacturing data
- Pre-configured industry standard manufacturing Key Performance Indicators (KPIs) and flexibility to extend or create new KPIs
- Advanced algorithms for root cause analysis of quality defects, pattern detection and prescriptive suggestions for continuous manufacturing performance improvement

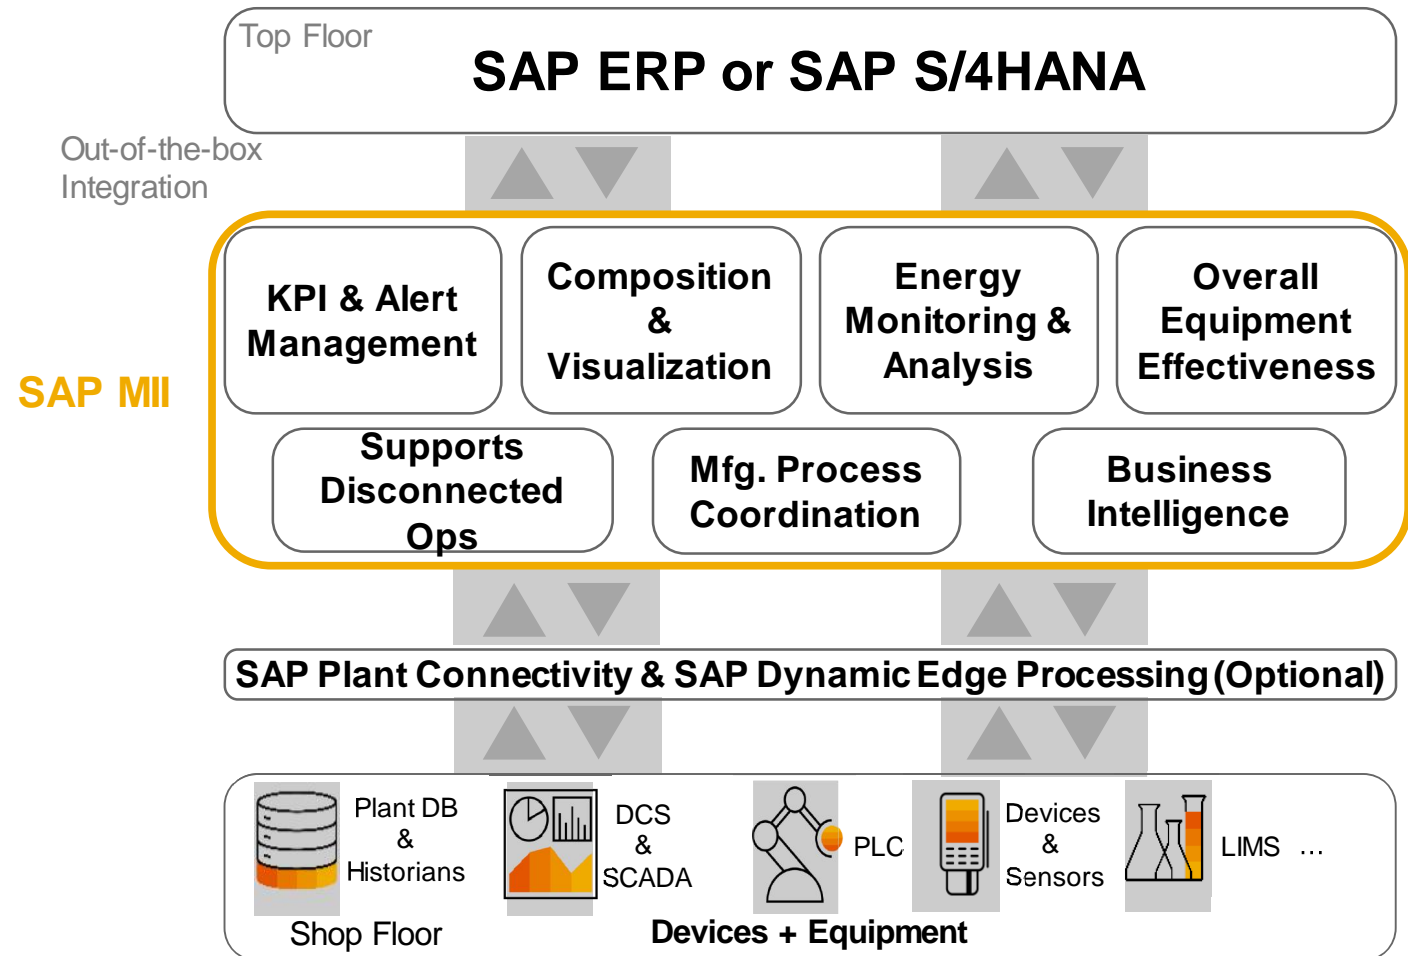

SAP MANUFACTURING INTEGRATION AND INTELLIGENCE (MII)

...enables you to integrate your plant and enterprise systems and display integrated data to your employees. You can use SAP MII to view, measure, and compare the performance of plants and assets with different automation system infrastructures. Connect to your shop floor equipment using SAP Plant Connectivity.

Key Capabilities

- **Universal:** Extensible manufacturing platform allowing rapid adaption to any manufacturing process. Applicable to all manufacturing industries and utilities
- **Integration:** Provide interoperability (in)between shop floor solutions and enterprise ERP
- **Intelligence:** Visualize data using plant information hierarchy from “corporate” ERP and design own dashboards
- **Orchestration** via business logic to enable customer-specific processes for planning, execution, maintenance and quality
- **Manufacturing Performance Management** with out-of-the-box content on OEE & Energy analytics. Capabilities to further build, extend and visualize and organize KPIs and share them on demand with UI builder.

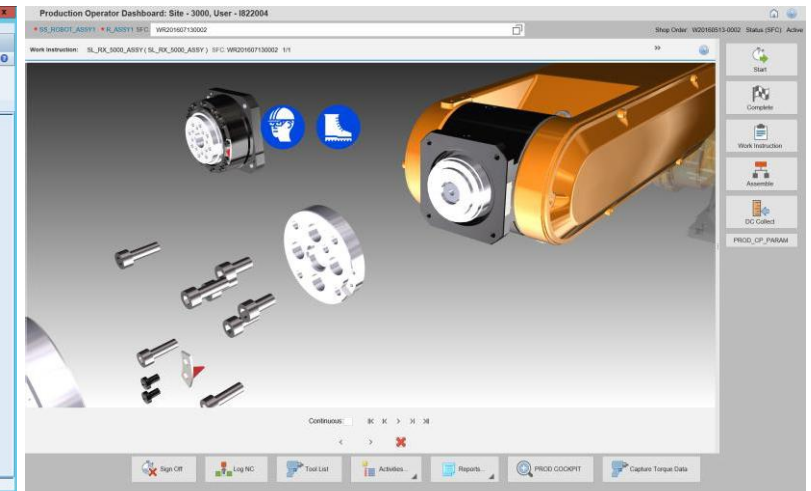

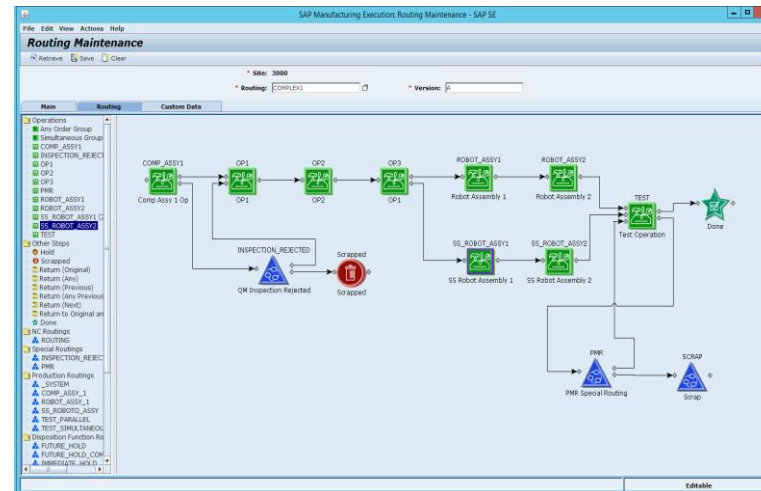

SAP MANUFACTURING EXECUTION

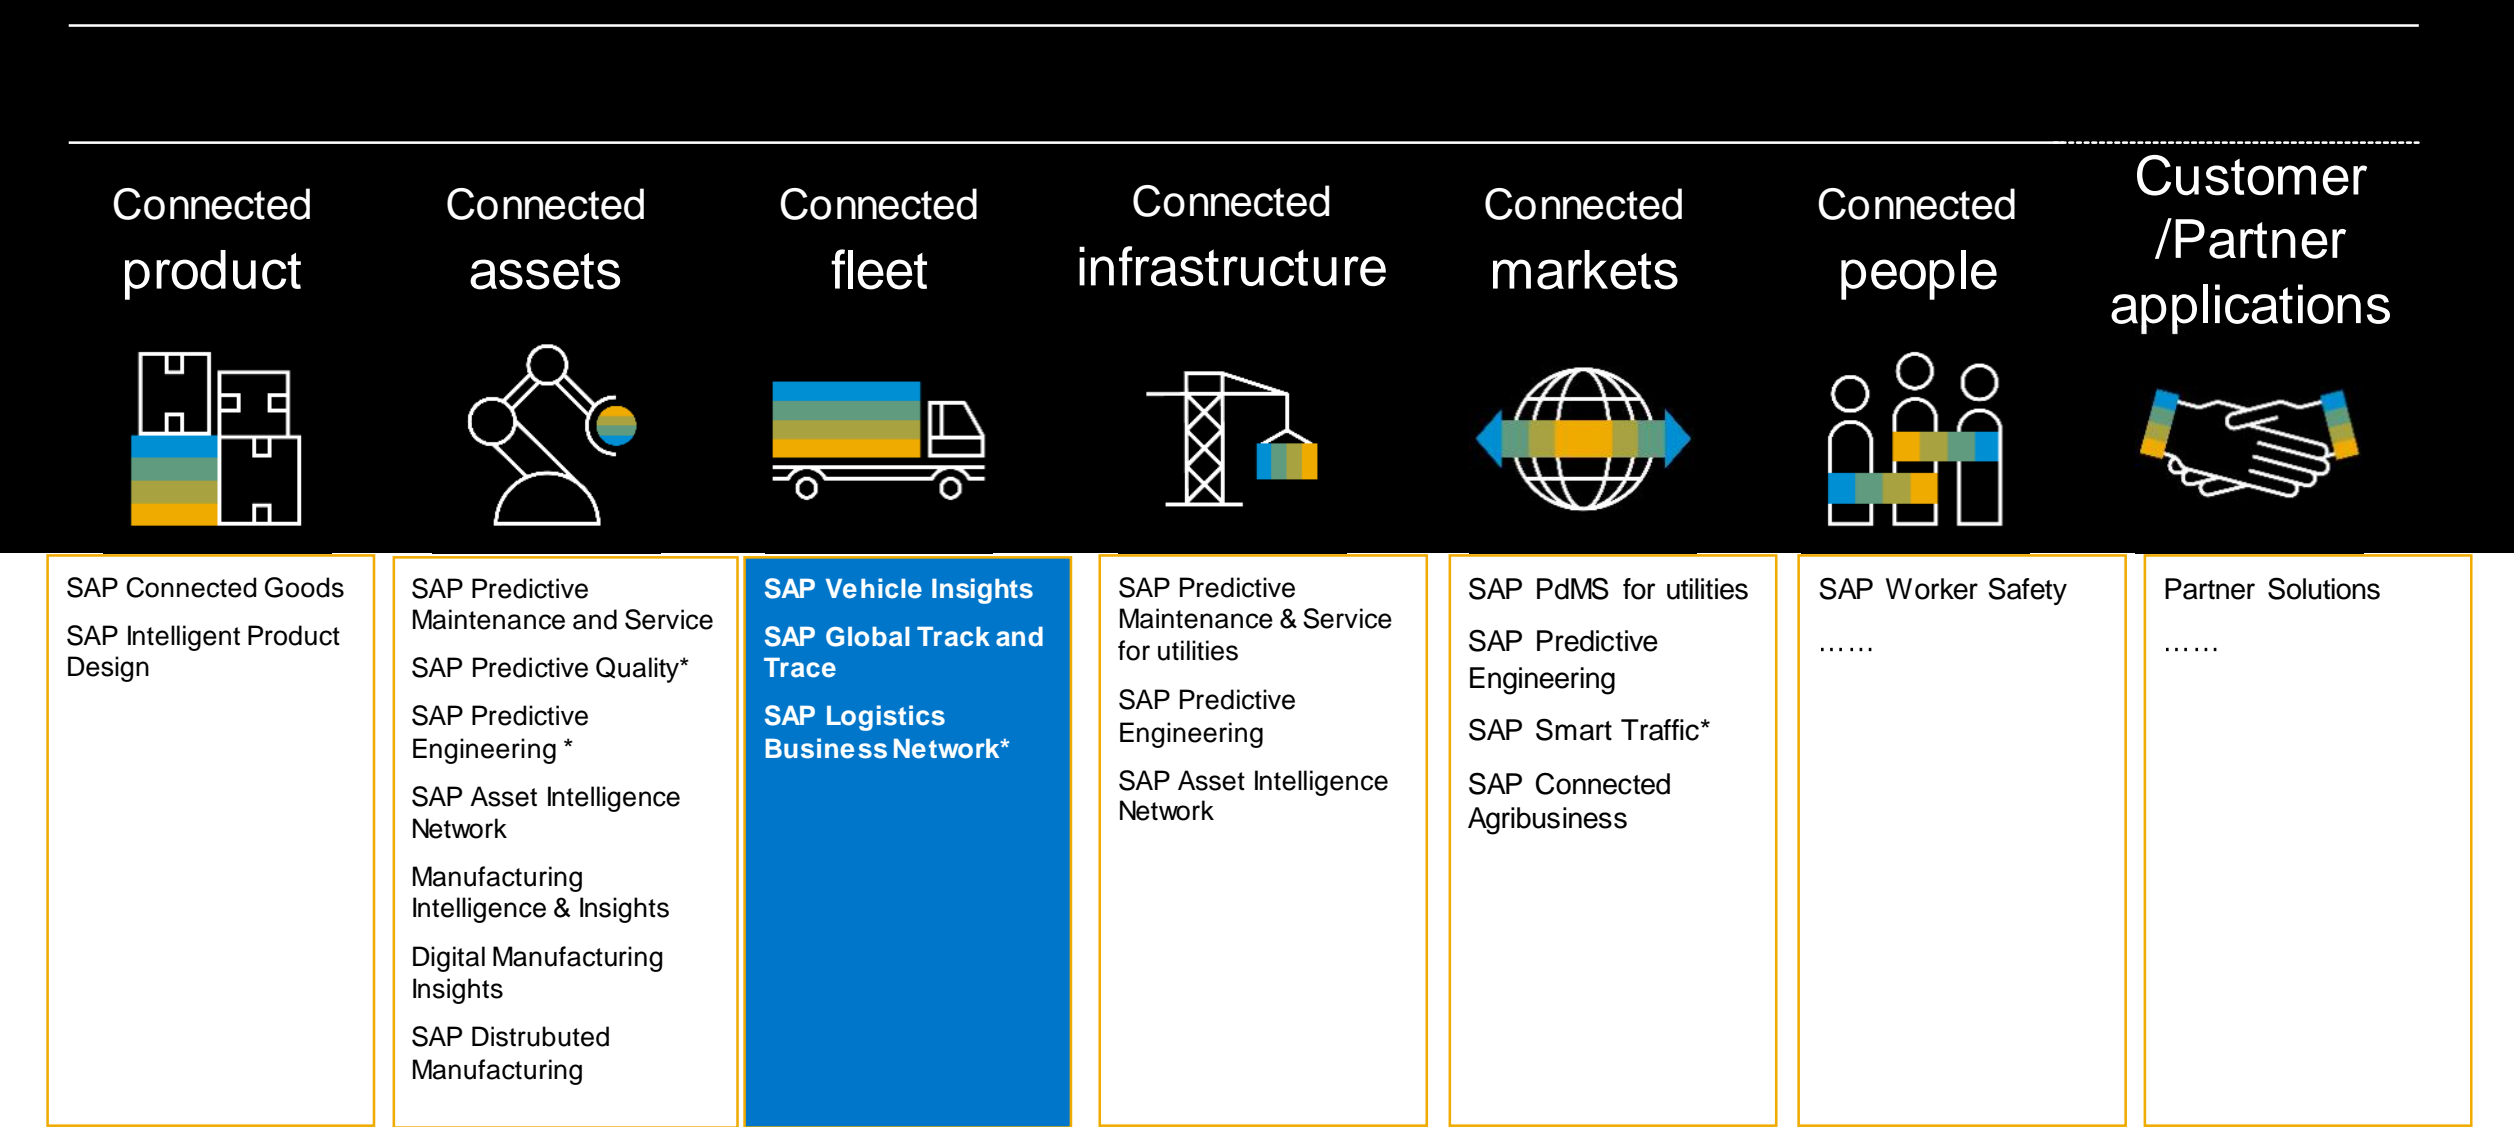

...a powerful, enterprise-level, scalable, manufacturing business solution that enables global manufacturers to manage and control manufacturing and shop floor operations and realize Industry 4.0 scenarios. It provides a multi-faceted set of features that integrates business systems to the shop floor, allowing for complete component and material-level visibility for single and global installations.

Key Capabilities

- Industry 4.0 enabled shop floor execution solution featuring lot size one production and paperless production
- Tracking & Tracing / Genealogy
- Non-conformance management including in-line sampling, visual test and repair
- Process Interlocking and zero failure
- Role-specific access and personalized dashboards for operators with browser-based UI
- Easy Integration “out of the box” to SAP ERP and via SAP Plant Connectivity to the shop floor
- Overall Equipment Effectiveness (OEE)

SAP Leonardo IoT – E2E Solutions

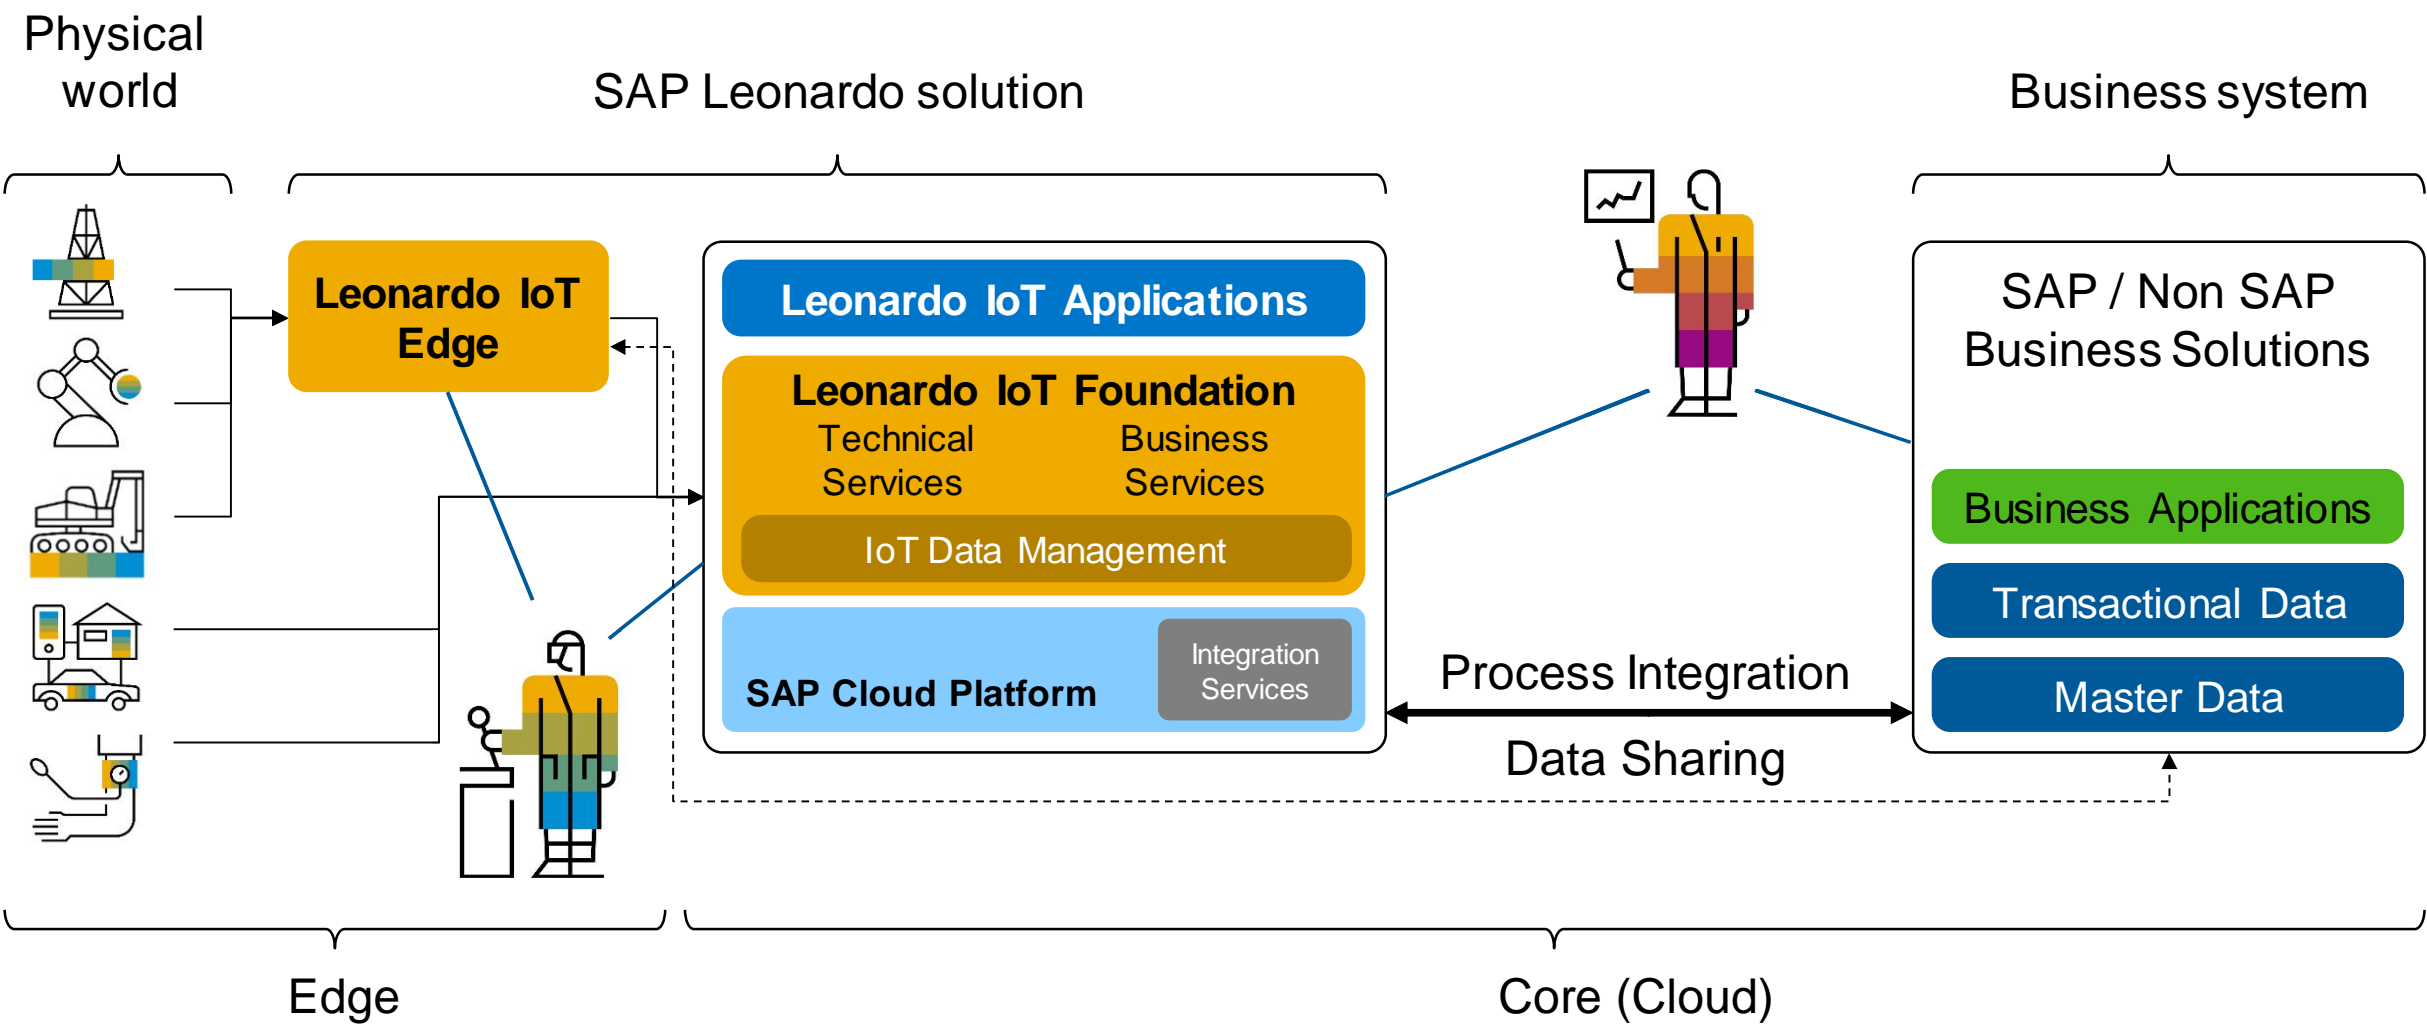

SAP Leonardo Internet of Things

Focus on Foundation and Edge

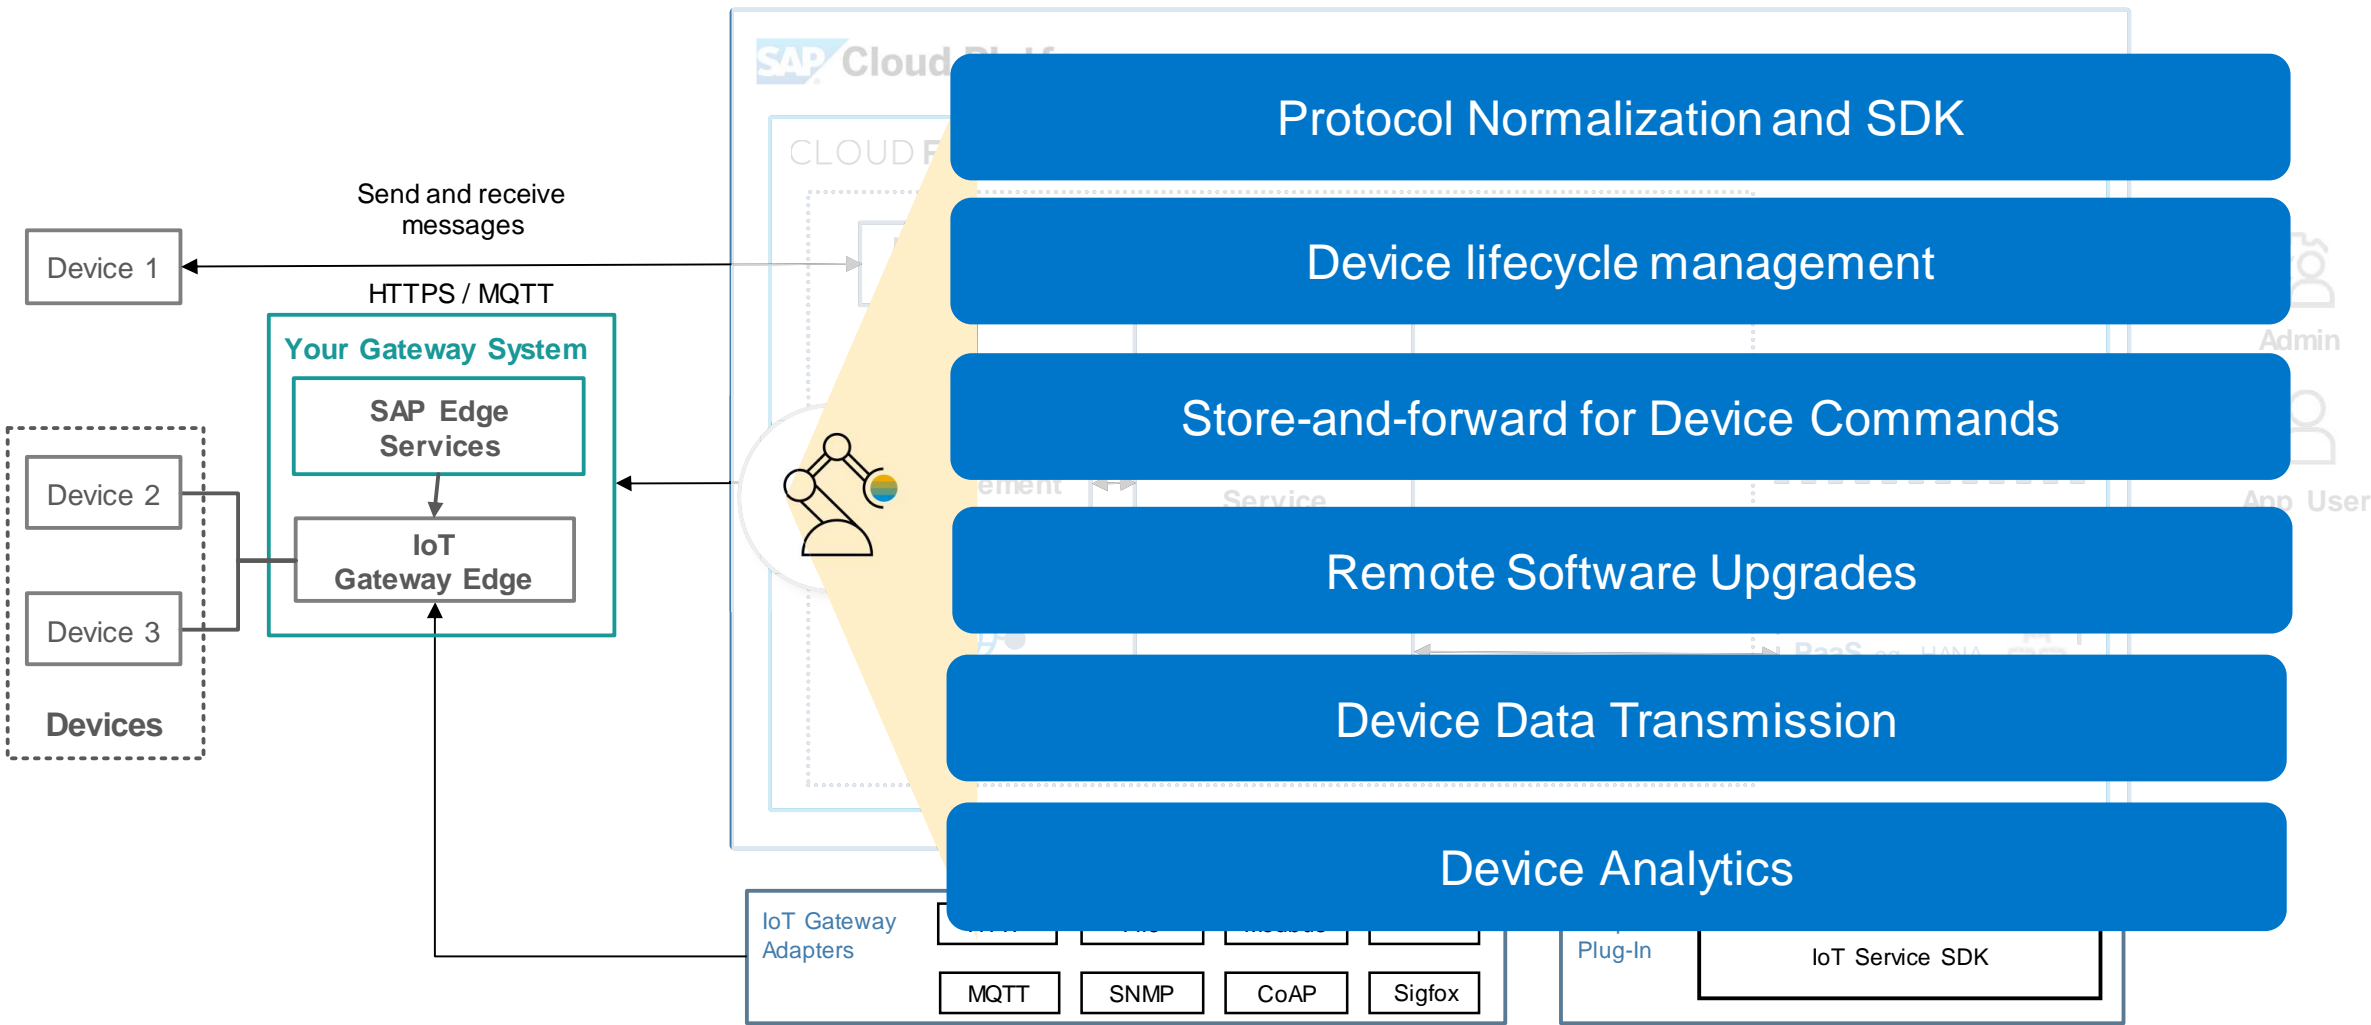

SAP Leonardo solution architecture for IoT

High Level Overview

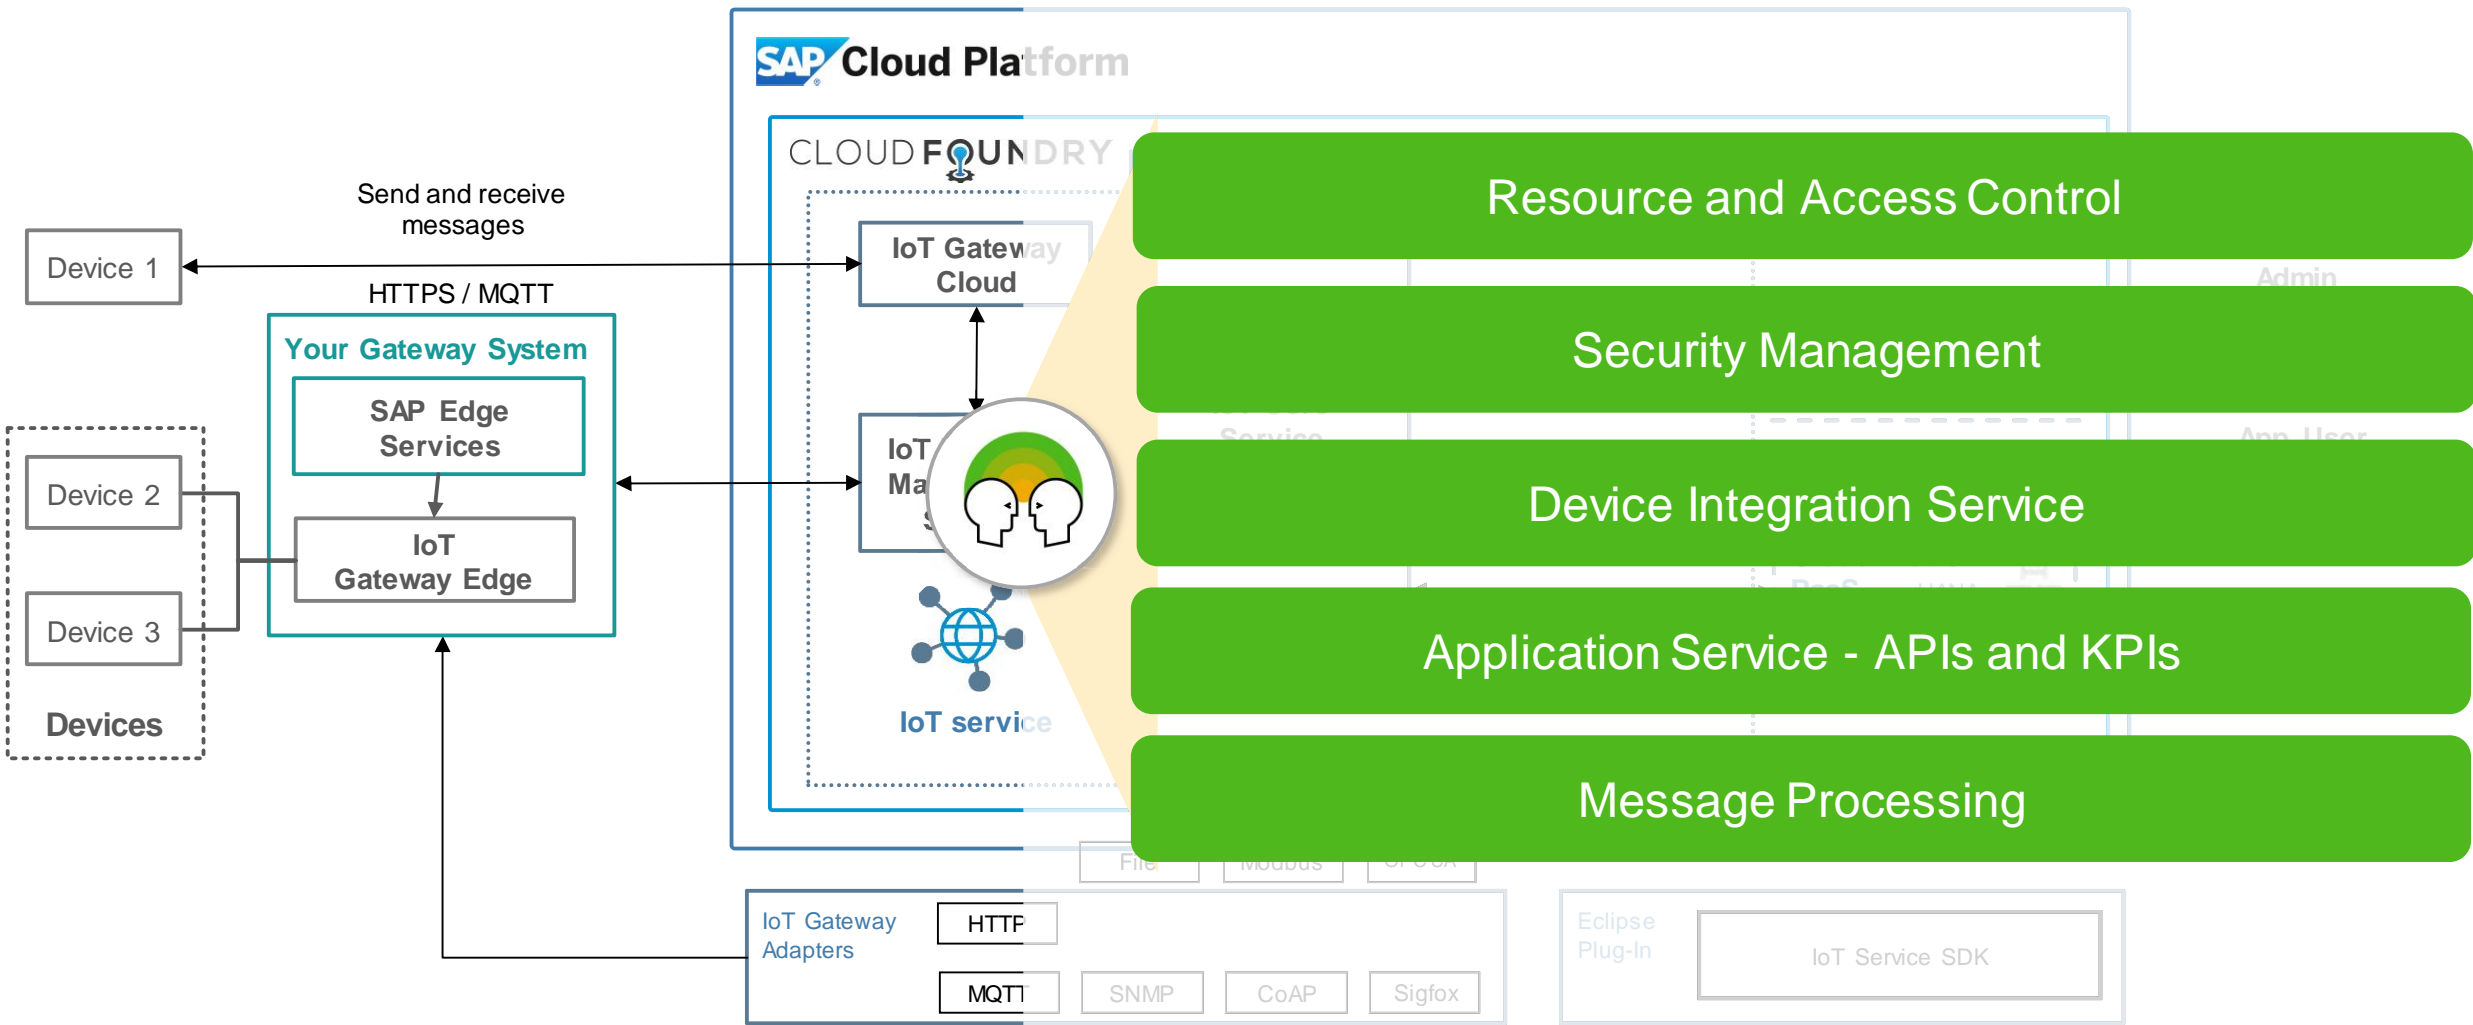

SAP Leonardo IoT Innovation Portfolio: Foundation

Technical Services (Device Management)

SAP Leonardo IoT Innovation Portfolio: Foundation

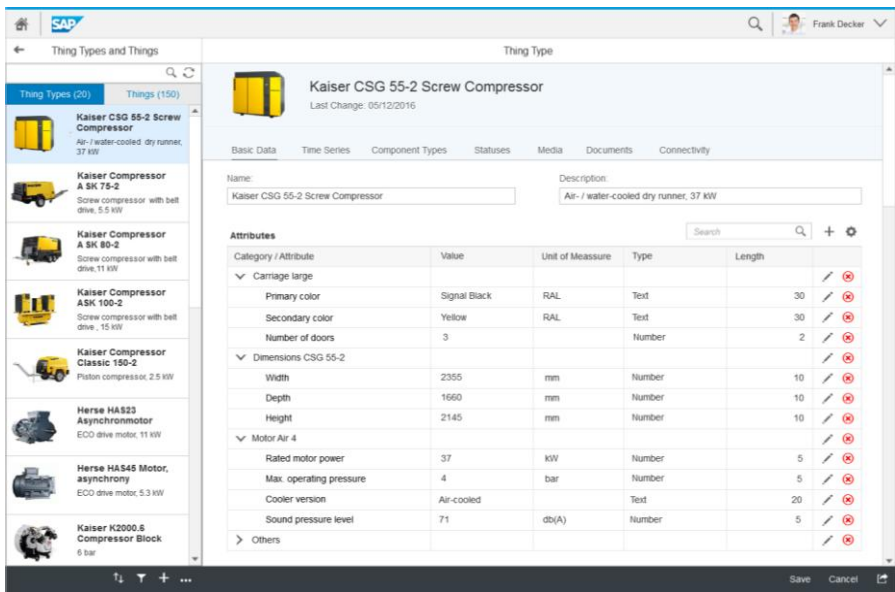

Technical Services (Core Services)

SAP Leonardo IoT Innovation Portfolio: Foundation

Business Services (Thing Model – Digital Twin)

Manage the digital twin - thing data, hierarchies, time series, and events

SAP IoT Application Enablement includes micro-services and re-usable components providing business semantics to model physical devices and processes across different industries and IoT scenarios. This is the foundation for all IoT scenarios from SAP and the partner ecosystem.

Thing Hierarchies

- Structure
- Hierarchy
- Relationships

Thing Data

- Basic Data
- Properties
- Status
- Documents & specifications

Thing Packages

- Flexible Usage in different applications
- Thing configurations

Time Series & Events

- Measurements
- Thresholds
- Error codes
- Alerts

SAP Leonardo IoT Innovation Portfolio: Foundation

Business Services (Big Data Management and Analytics)

Tiered data storage and analytics for IoT - Combine SAP HANA and big data storage

Time Series Aggregate Store

- **SAP HANA**
- **Time Aggregates** e.g. AVG, MAX, MIN over 120 sec intervals, hours, weeks
- Covers majority of visualization & reporting needs (e.g. dashboard, multi-day charts,...)
- High-performance, flexible selections with full SQL

Archive / Cold Store

- Object storage
- Individual data points of time-series data
- High-latency access
- Retention period: **multiple years**

Time Series Store

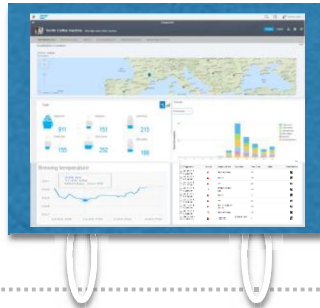

- Short-term: **Cassandra** (planned **SAP Data Hub**)
- Individual data points of time-series data
- High-performance access on single objects and updates possible
- Retention period: **multiple months**

SAP Leonardo IoT Innovation Portfolio: Foundation

Business Services (Application Development)

3

User Interfaces

IoT Application Builder

- Web-based development environment
- IoT project templates and UI Components
- Rules Modeler
- KPI Modeler

2

Mash-Up Services

IoT Mash-up Service Builder

- Web-based service composition environment
- Event and API-driven application flows modelling
- Rich selection of reusable process atoms

1

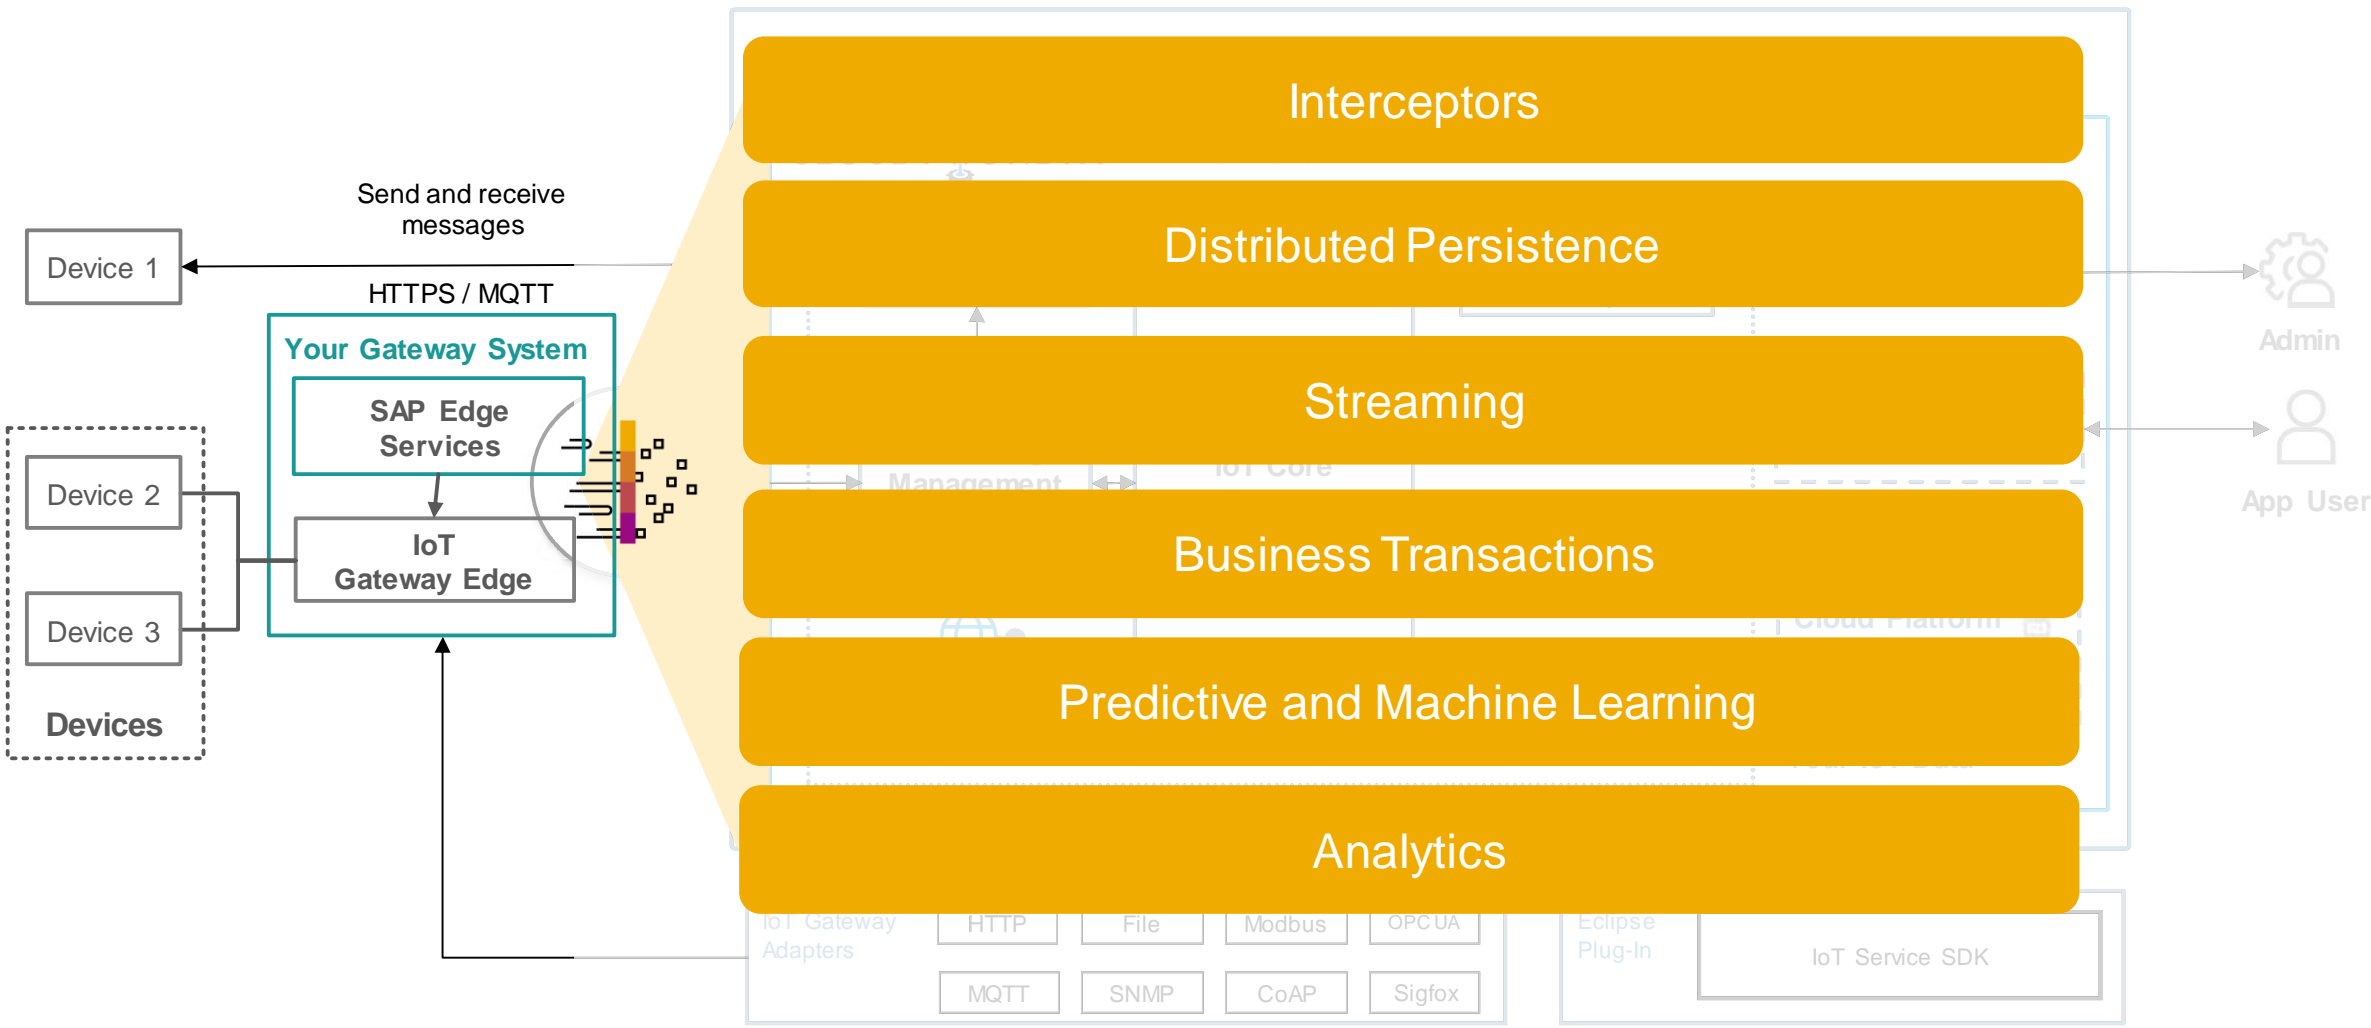

Micro-Services

IoT Application Services

- Thing Model
- Business Partner Authorization
- Partner and Customer's own micro services

SAP published comprehensive roadmaps for many components of **SAP Leonardo** – including **SAP Leonardo IoT**

SAP Road Maps

Explore the **SAP Transformation Navigator**, a self-service tool which guides you through your digital transformation by generating a product road map of recommended SAP products and solutions tailored to your business.

See official SAP product and solution road maps below.

Solution Road Maps

Solution road maps cover innovations that focus on business solutions and processes and span several products that are relevant for customer lines of business in their industries.

Product Road Maps

Product road maps describe how feature and function capabilities of an SAP product or technology are planned to progress over time.

Browse all Road Maps

Registration Required – In order to access the Road Maps you will need to register and create an SAP account. Existing account holders, Customers, and Partners can also log in using their SAP credentials. You will be prompted to register or log in when you attempt to access the Road Maps. You will only need to register once.

Click [here](#) for Upcoming Road Map Webinars. See below for the complete set of published Road Maps.

Cross-Product	Road Maps	Webinars
SAP Road Map for Cloud Integration	Edition 2017 Q1	
Commodity Management	Edition 2017 Q2	
SAP Fiori	Edition 2017 Q3	April 2017
SAP Leonardo	Edition 2017 Q4	July 2017
SAP Leonardo Machine Learning	Edition 2017 Q2	
SAP UI5	Edition 2017 Q1	

Digital Transformation Common Strategies

Innovate to win the market while continuing to run the business

- Experiment in a Sandbox
- Implement Tactically
- Launch Massive Initiative
- Do Nothing ... Yet
