Market Shifts in Product and Service Innovation by 2020

Focus moves from producing & installation to **efficiently operate** over entire lifetime

By 2017 IDC predicts

of Global Manufacturers will use analytics to sense and analyze data from Connected Products and Manufacturing and optimize increasingly complex portfolios of products ¹

By 2018 Gartner predicts

Connected "Things" will be requesting support ²

By 2017 IDC predicts

of Top 100 Global Manufacturers will arm field service workforces with Augmented Reality capabilities to bridge the gap between traditional products and connected services ¹

By 2018

of Global Manufacturers will achieve superior "Perfect Service Levels" by investing in analytics to support unified Customer Life-Cycle orientation from sales through service ¹

By 2020

of major new business processes and systems will incorporate some element, large or small, of the IoT ³

¹ IDC - 'Worldwide Manufacturing Product and Service Innovation 2016 Predictions', 2015

² Gartner - 'Gartner reveals top predictions for IT organizations and users for 2016 and beyond', 2015

³ Gartner - 'Analysts reveal five unexpected implications from the Internet of Things', 2016

Business Value for Asset Operators

Benefit from a single source of truth

MANUFACTURER

OPERATOR

Understand the complete context – one channel to many manufacturers

Pump XYZ
Manufacturer A

Flow Meter
Manufacturer B

Engine
Manufacturer C

Production
Line #1

BUSINESS VALUE

- Establish one channel to many manufacturer's, EPCs and Service providers
- Reduce manual asset search effort
- Lower asset life cycle costs
- Decreased downtime, planned and unplanned
- Lower spare parts inventory
- Receive notifications, service work summaries and service bulletins
- Push communication and alerts to manufacturers / service providers
- Reduce master data maintenance effort
- Higher process safety by transparent and bundled product – service offerings from manufacturer

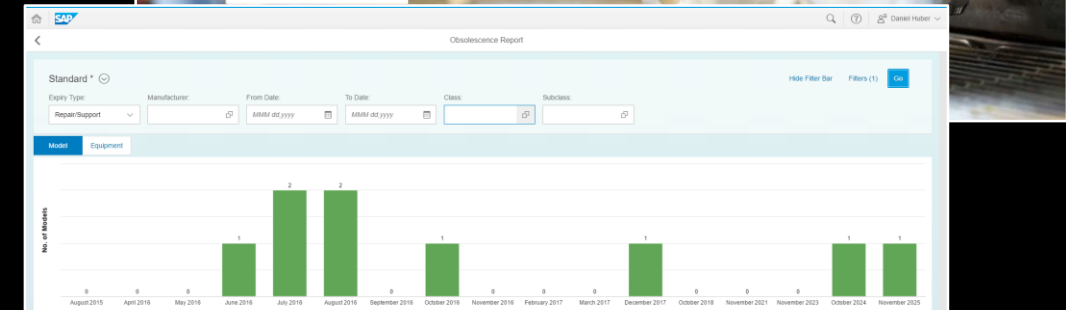

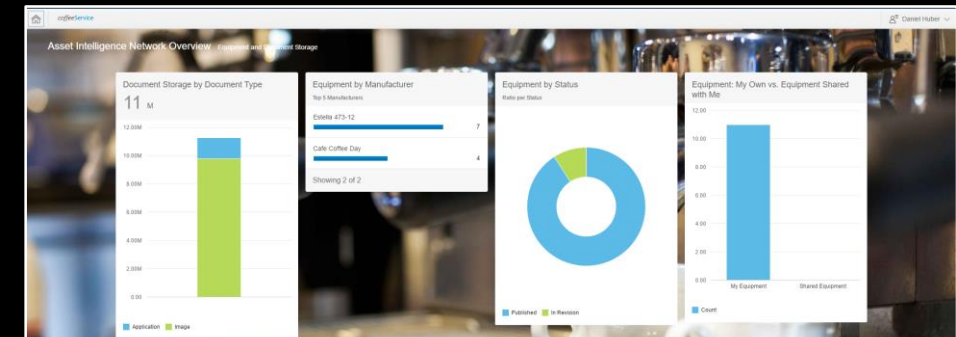

Performance Analytics

Improve product performance allowing customers to benefit from asset insights

Manage assets as a service or redesign them based on performance

- Institute collaborative network services for managing equipment, collecting asset performance analysis and feedback and fostering usage-based design enhancement
- Improved recall capabilities based on equipment status and lifecycle information
- Inform customers about major updates using announcements and 3D instructions
- Embedded analytics for models and equipment

Equipment

... and finally **rethink** Business Processes

SAP Asset Intelligence Network

What it looks like – how it works

Ease of use

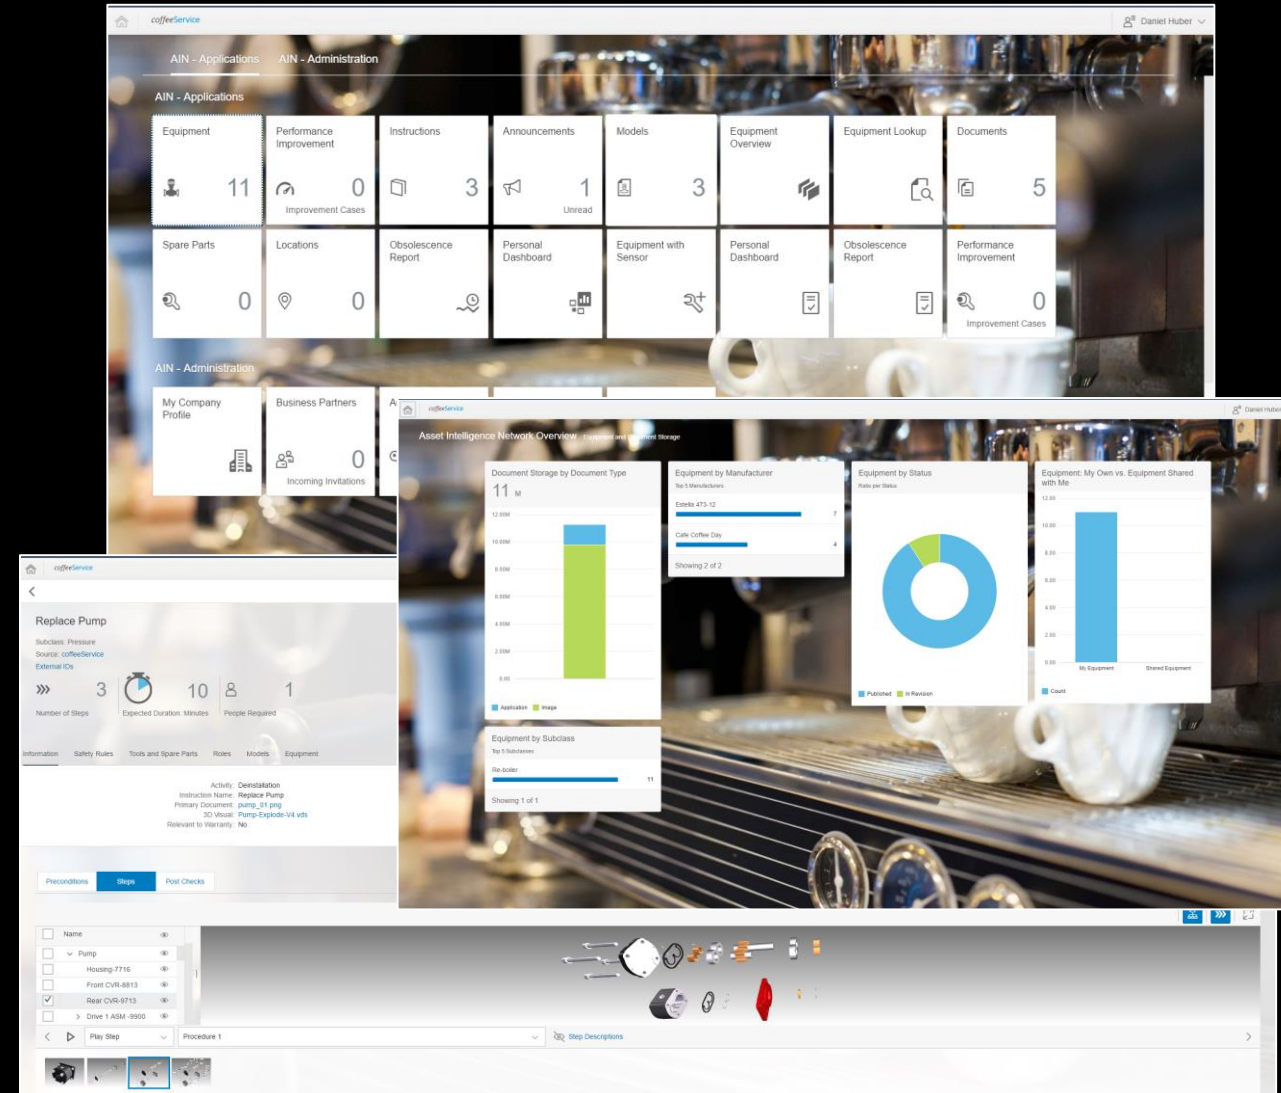

SAP Asset Intelligence Network is a cloud-based business network with consumer-grade user experience, seamlessly integrated with Fiori and SAP Fiori Launchpad

Simple and secure onboarding

For manufacturers, operators, EPCs and service providers

Powerful business content and analytics

- Introduce a digital twin to represent each physical machine or product along its asset lifecycle
- Standardize equipment management through asset master data and spare-parts information available for update from the network
- Streamline maintenance through access to the latest documents and service bulletins on maintenance strategies
- Achieve collaborative design and execution for complex installation or maintenance procedures

Leverage manufacturer information **along the Lifecycle**

3D Data, Service Instructions & Announcements

Digital Twin for Business

New digital services like Firmware updates, recalls, spare parts updates etc. require a completely different approach to asset management.

- Every equipment has one unique identifier and one master record accessible by all relevant parties throughout it's lifecycle
- The Digital Twin brings together the
 - Sensor information (asset health)
 - Installation and service information
 - Sales and contextual information

End to end scenario

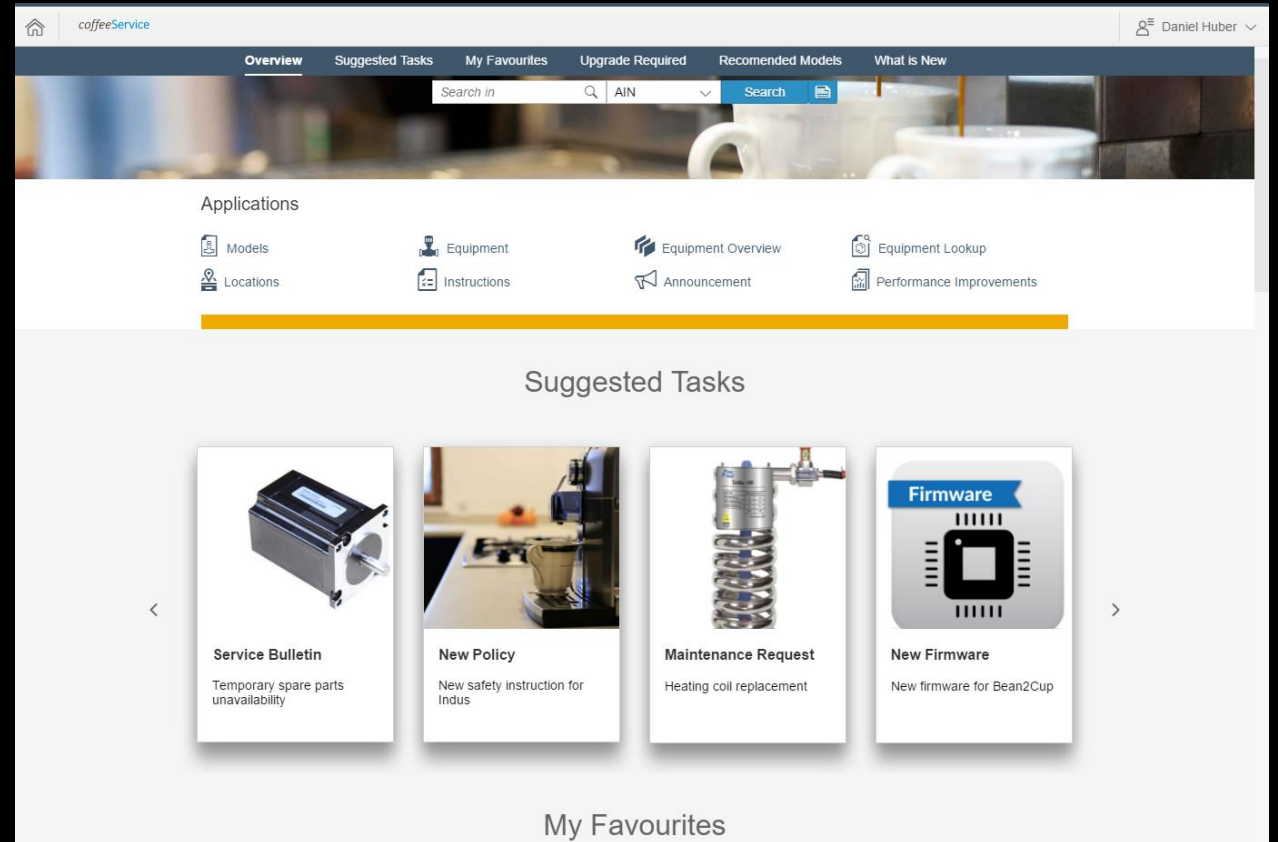

Integration Scenarios

Customer Portal & HCP extension capabilities

Customer Portal & HCP extension capabilities

- SAP provides a standard role-based personal dashboard acting like an equipment portal providing insights into the frequently viewed equipment, favorites and suggested tasks.
- Customers can easily enhance and adjust this personal dashboard using the extension capabilities of HANA Cloud Portal and SAP Fiori Launchpad.

Integration Scenarios

Integration with Enterprise Asset Management

The integration options are available via notes :

- Display of model information in custom EAM side panel
- Creation of model attachments in EAM for linked EAM objects

Pre-requisites for both of the above capabilities is the implementation of the following notes:

- Linking of EAM objects to AIN Models (Note 2327152)
- AIN Authentication (Note 2382489)

The screenshot displays the SAP NetWeaver Business Client 5.0 interface. The main window shows the 'Display Equipment : General Data' screen for equipment ID 10003590. The data includes:

- Equipment: 10003590, Category: S, Customer equipment
- Description: Sub Sea Pump 1000
- Status: ECUS INST, 0003
- Valid From: 03.02.1999, Valid To: 31.12.9999

The 'General data' section includes:

- Class: ED11, Pumps
- Object type: [empty]
- AuthorizGroup: [empty]
- Weight: 11,800 KG, Size/dimension: 442 * 421 * 109 MM
- Inventory no.: [empty], Start-up date: [empty]

The 'Reference data' section includes:

- AcquistnValue: 0,00, Acquisition date: [empty]

The 'Manufacturer data' section includes:

- Manufacturer: ksb, ManufCountry: [empty]
- Model number: ACME_SubSeaPump, Constr.yr/mth: [empty] / [empty]
- ManufPartNo.: [empty]
- ManufSerialNo.: [empty]

The right-hand side panel, titled 'AIN Model Information', shows:

- Header Information: Name: ACME_SubSeaP..., Description: shortDescription, Manufactu...: ksb, Template: SubSeaPumps_A..., Global ID: AIN_GLOBAL_00...
- Characteristics- Values: A table with two columns 'Value' and 'Value'.

Value	Value
Environment	Deep Sea
Sensing principle	displacement
Detector communica...	one-way
Method of ventilation	Mechanical Ventilation
Valve material	alloy type
- Characteristics- Picture: [empty]

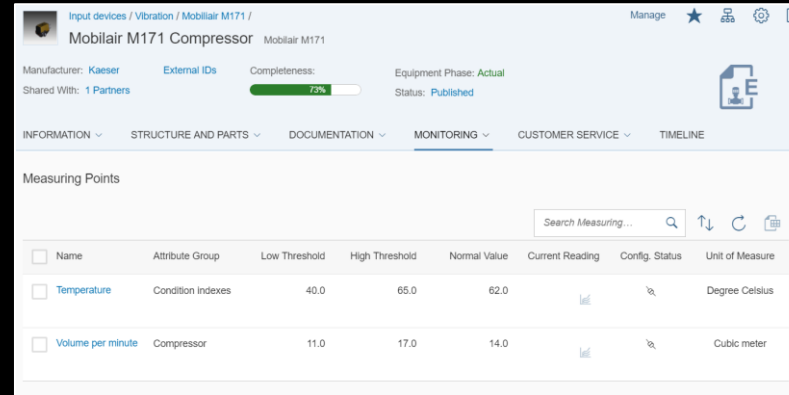

Connect with Sensor data using SAP IoT AE

Digital Twin connected to IoT Thing Model

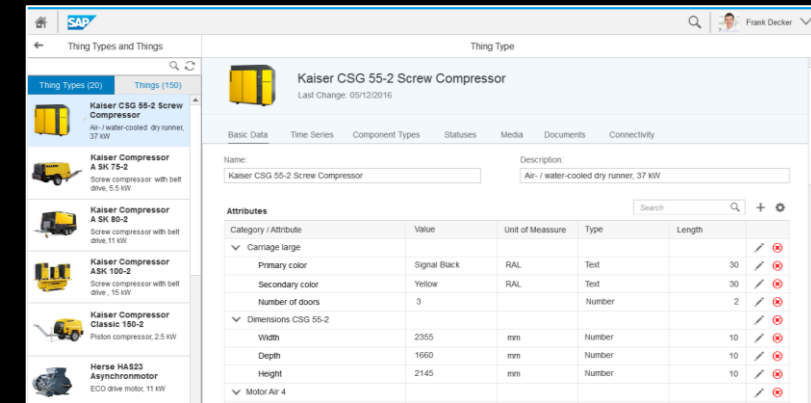

SAP Asset Intelligence Network can be connected with SAP IoT Application Enablement Services for Time Series Data.

- Digital Twin leverages the defined Thing Model defined by SAP IoT AE
- SAP IoT AE providing business semantics to model physical devices and processes
- Time Series Data is not stored in SAP AIN
- SAP IoT AE stores Data using Dynamic Tearing

➔ 1 Single Source of Asset Information Data bringing together static static Master Data (OEM and Operator) with dynamic sensor information (asset health)

SAP IoT Application Enablement

Protocols
Shop Floor

HTTP
IEEE 802.15.4
MQTT
HART & W-HART

DDS
Profibus
Infinibus
DLMS/COSEM

OPC UA
XMPP
LoRa
...

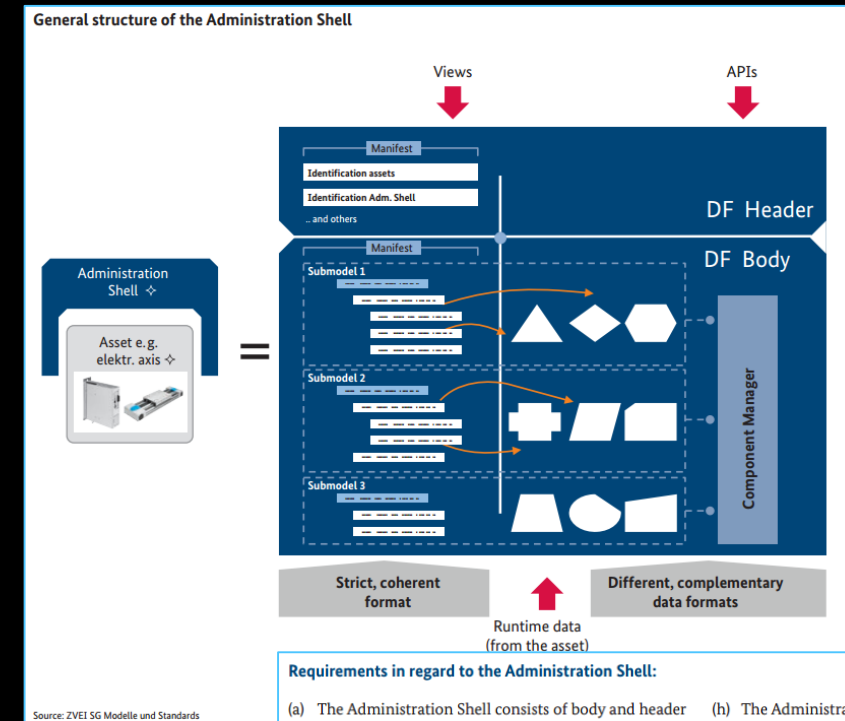

Integration Scenarios

Support for the RAMI 4.0 Administration Shell

SAP Asset Intelligence Network supports the RAMI 4.0 Administration Shell

- One single source of truth for the asset / equipment
- Information about the utilization of the asset
- Accessible via APIs, based on a service-oriented architecture
- Contains information about different application aspects (installation, business partners, condition monitoring, tickets, spare parts, etc.)
- Supports unique Identifiers, types and instances
- Manufacturer and operator specific attributes

Requirements in regard to the Administration Shell:

- | | |
|---|--|
| (a) The Administration Shell consists of body and header | (h) The Administration Shell has a unique ID |
| (b) The body contains information about the respective asset | (i) The asset has a unique ID |
| (c) The header contains information about utilisation of the asset | (j) Also a factory is an asset, it has an Administration Shell and is accessible by means of ID |
| (d) It consists of the Manifest and Component Manager | (k) Types and instances must be identified as such |
| (e) The information in the Administration Shell is accessible by means of a service-oriented architecture (API) | (l) The Administration Shell can include references to other Administration Shells or I4.0 information |
| (f) It represents information about different application aspects of the asset | (m) Additional properties, e.g. manufacturer-specific, must be possible |
| (g) Structuring according to views (pursuant to MES ISO/IEC81346, Digital Factory BCFLP, ...) | (n) A reliable minimum number of properties must be defined for each Administration Shell |

Integration Scenarios

SAP Cloud for Customers

Integration with Cloud for Customers

SAP Cloud for Customers is just one integration possibility

Manufacturers can easily access all available tickets for an equipment and control the access for Operators and service providers

Operators can create service requests directly on the equipment level

If the collaboration is in place, manufacturers can apply this on their customer equipment to fulfill service agreements and increase uptime & customer satisfaction

The top screenshot displays the SAP Cloud for Customers interface for an equipment object. The header shows the SAP logo, a search icon, and the user name 'Daniel Huber'. The main title is 'Equipment' and the object name is 'E28153-Flow' (Flow Meter for Vertical Pump). A navigation menu includes 'INFORMATION', 'STRUCTURE AND PARTS', 'INSTRUCTIONS', 'DOCUMENTS', 'ANNOUNCEMENTS', 'MEASURING POINTS', and 'IMPROVEMENT CASES'. Below the menu, there is a section for 'Object Images' with several thumbnail images of the equipment and its components.

The bottom screenshot displays the SAP Cloud for Customers interface for a different equipment object. The header shows the SAP logo, a search icon, and the user name 'Daniel Huber'. The main title is 'Equipment' and the object name is 'MOTOR 250KW - 28248'. A navigation menu includes 'INFORMATION', 'STRUCTURE', 'INSTRUCTIONS', 'EQUIPMENT DOCUMENTS', 'ANNOUNCEMENTS', 'MEASURING POINTS', 'IMPROVEMENT CASES', and 'TICKETS'. Below the menu, there is a section for 'TICKETS' with a table of service requests.

Learn more about SAP IoT

Ein Paradigmenwechsel markiert Industrie 4.0; die klassische Automatisierungspyramide hat ausgedient. Stattdessen entstehen Netzwerke aus autonom agierenden cyberphysischen Systemen – also intelligente, miteinander gekoppelte Anlagen, Komponenten, Module und Maschinen, die sich selbst steuern. Außerdem verschmelzen betriebswirtschaftliche und fertigungsbezogene IT-Prozesse.

Summary

SAP Asset Intelligence Network

Provides a digital representation of all physical equipment in the field with secure, controllable sharing rights across business partners to enable:

- Customer insights: Leverage the installed base in the business network to grow aftermarket business
- Performance analytics: Improve product performance allowing customers to benefit from asset insights
- Digital services: Win in the new digital market space by driving advanced business models into the customer base
