Generate Process Models with GenAI

3 weeks ago

18 Kudos 1,307

Abstract

This blog post describes how to use Generative AI to create business processes from a graphic or a textual description as a BPMN file and import them into [#SAP Cloud ALM](#) or [#SAP Signavio](#). Anyone can try the examples without any programming knowledge.

Content

- Introduction
- Process Authoring in SAP Cloud ALM
- Use Case 1: Text based Process Description
- Use Case 2: MS Excel Upload
- Use Case 3: Create from a BPMN graphic or any other graphical representation of a process model
- Use Case 4: Create from Sketch
- Process Modeling with SAP Signavio
- Comparison of AI models used
- Conclusion

Introduction

Generative AI has taken the world by storm and is set to change the way we communicate and work forever. [SAP Business AI](#) is an excellent example of how this new technology can help businesses become more innovative and productive. The challenge now is to translate the amazing capabilities of generative AI into real-world solutions.

SAP Cloud ALM, tenant extension

2 weeks ago

2 Kudos 988

Since [#SAP Cloud ALM](#) was released to customers, back in July 2020, it was only possible to get one SAP Cloud ALM tenant per eligible customer number.

Lots of customers have requested to get multiple tenants for the same customer number, for various reasons:

- Multiple productive tenants:
 - To provide SAP Cloud ALM to different organizational units in large enterprises.
 - To separate implementation and operations.
 - ...
- Adding a development or test tenant to the existing productive tenant
 - To build and test extensions.
 - ...
- To separate systems from different landscapes:
 - For systems containing sensitive information.
 - ...
- To have training or playground environments.
- And much more.

I am glad to announce that SAP has been working on this. We will release soon a new product on the SAP price list called [SAP Cloud ALM, tenant extension](#) so that customers will be able to subscribe to additional tenants for [#SAP Cloud ALM](#).

SAP Cloud ALM: requirement approval with external workflow management system

a month ago

1 Kudo 561

Objectives

You want to externalize SAP Cloud ALM **requirement approval** to external **workflow management** systems like SAP Business Process Automation.

Prerequisites

Any **workflow management** external system can be connected to SAP Cloud ALM using the provided External API Integration capabilities.

The external tool must:

- Expose REST APIs to receive messages.
- Expose an API endpoint accessible from your SAP Cloud ALM BTP sub-account.
- Support one of the following authentication protocol described in the following [documentation](#).
- Support a compatible payload for REST operations. The list of supported [mapping](#) rules can be found in the [help.sap.com](#).

If the external tools do not match the requirements for a simple integration, an integration can still be achieved by using **SAP Integration Suite** or a third-party API Integration HUB platform.

SAP S/4HANA Conversion: SAP S/4HANA Upgrade:

Analysis Integration Settings

Analysis ID	Analysis Name	Analysis Scenario	Created On	Requirements	User Stories
900001	S/4 Conversion SAP	SAP S/4HANA Conversion	Oct 18, 2023, 3:23:34 PM	<input type="checkbox"/>	<input type="checkbox"/>
900002	Analysis SAP for system conversion	SAP S/4HANA Conversion	Nov 15, 2023, 9:22:26 AM	<input type="checkbox"/>	<input type="checkbox"/>

activation of integration

Reporting

Track the status of Requirements or User Stories created from SAP Readiness Check via the traceability reports

Use the Source-field to identify follow-ups created from Readiness Check findings

The screenshot shows the SAP Analytics Cloud interface for Requirement Traceability. The top navigation bar includes the SAP logo, 'Analytics', a search bar, and user profile 'JM'. The main title is 'Requirement Traceability'. Below the title are several filter fields: Project (set to 'Demo Project for S/4 C...'), Scope, Solution Process, Requirement Status, Feature, User Story, Project Task, Workstream, Test Preparation, Test Execution, and Source (highlighted with a red box and set to 'SAP Readin...'). A link 'Adapt Filters (2)' is visible below the filters. The main content area shows a table titled 'Requirement (4)' with columns: Title, Requirement Status, Feature, User Story, Project Task, Test Preparation, and Test Execution. The table contains four rows of requirements.

Title	Requirement Status	Feature	User Story	Project Task	Test Preparation	Test Execution
<input type="checkbox"/> S4TWL - ASSET ACCOUNTING 3-19686	In Realization	1	1		1 1	1
<input type="checkbox"/> Business Decision (S4TWL - ASSET ACCOUNTING) 3-19680	In Refinement					
<input type="checkbox"/> S4TWL - Custom Fields 3-19909	In Refinement					
<input type="checkbox"/> S4TWL - OUTPUT MANAGEMENT 3-19911	In Refinement					

SAP Cloud ALM supporting Clean Core

SAP Cloud ALM provides the environment to manage your clean core projects along SAP Activate and the 5 dimensions together with analytics and Traceability dashboards to track adherence to clean core criteria

1 Processes

- Consumption of SAP Best Practice Content
- Execute Fit-to-standard Workshops
- Requirements management
- Design custom processes
- Business Process Monitoring
- Job and Automation Monitoring
- SAP Readiness Check to remediate simplification items

2 Extensibility

- Manage development (ABAP & BTP)
- Manual & Automated testing (with Tricentis Test Automation)
- Agile Build
- Drive business continuity of extensions built in ABAP and/or BTP
- SAP Readiness Check to remediate custom code

3 Data

- Integration and exception monitoring
- SAP Readiness Check to resolve data quality issues

4 Integration

- Integration Documentation
- Manage CPI deployments
- Integration and exception monitoring

5 Operations

- Holistic and secure application and business process operations
- Integration in IT-SM processes
- Automated regression testing
- Release Management
- SAP Readiness Check for SAP S/4HANA upgrades

Integrating Clean Core Principles in SAP S/4HANA System Conversion projects

- Analyze your code in the Custom Code Migration App and SAP Readiness Check (identify unused code or remediation areas)
- Perform Business Process Review leveraging SAP Best Practices
- Selective Conversion of only essential custom code to compatible SAP S/4HANA code
- Utilize Extensibility Options (e.g. in-app or side-by-side extensions) governed with Features in SAP Cloud ALM
- Use automated testing with Tricentis Test Automation for SAP
- Perform Performance and Security Testing to avoid impact of refactored code
- Implement the various Monitoring capabilities (like Business Process Monitoring or Integration Monitoring)
- Perform User Training (e.g. developers) how to leverage standard SAP functionalities and extension options
- Establish a Governance Framework to enforce clean core principles in future projects
- Continuous alignment with SAP Roadmap to take advantage of SAP's provided standard capabilities

Summary – how SAP Cloud ALM can support your system conversion project

- Support of upload of results from Digital Discovery Assessment (DDA) 
- Integration of SAP Activate Roadmaps (e.g. SAP S/4HANA Cloud, private edition - System Conversion or Selective Data Transition) 
- SAP Solution scenarios and processes available for scoping 
- Extended integration with SAP Readiness Check including information from ATC and Custom Code Migration App 
- adopt clean core principles by leveraging SAP Best Practice processes, SAP Readiness Check and SAP Cloud ALM Operations capabilities 
- Support of Retrofit
