SAP Cloud ALM

SAP Cloud ALM provides businesses with a robust and scalable solution for managing their entire solution landscape in the cloud. It enables faster adoption of innovation and more efficient operations through streamlined processes, increased transparency and improved collaboration.

Benefits of SAP Cloud ALM

✓ **Reduce TCO of solution landscape**

✓ **Supports Cloud & Hybrid**

✓ **Instantaneously available**

✓ **Included in subscription**

## Capabilities of SAP Cloud ALM:

Implementation

Holistic support for implementation and maintenance of all SAP solutions, covering all aspects from design, build, test and deploy with integrated analytics and traceability

Operations

Proactive problem detection for integrations, exceptions, jobs, performance and accelerated problem resolution with automated corrective actions integrated into customer service management platform

Service

Collaborative workspace for consumption of SAP services, management of service results and follow-up activities
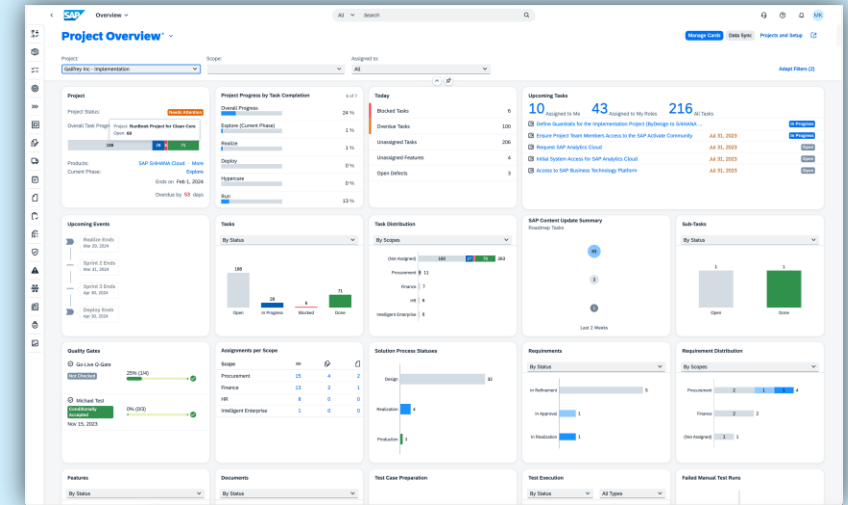

Facts and figures

9200+
Customers around the world

Low TCO
Included in Subscription and Maintenance

Holistic
Supports implementation, Operations & Service
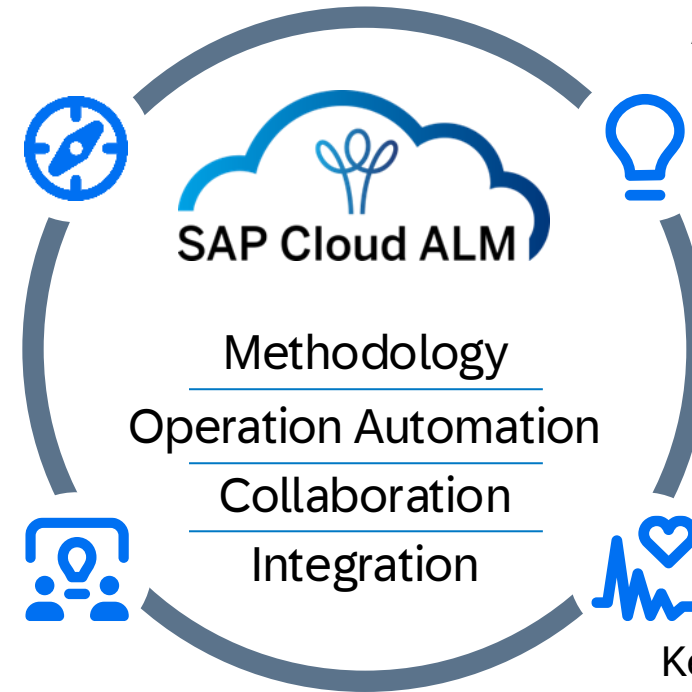

SaaS Native
Solution available across the globe

SAP Cloud ALM supports Clean Core

SAP Cloud ALM

SAP Cloud ALM provides the environment to manage your clean core projects along SAP Activate and the 5 dimensions together with analytics and Traceability dashboards to track adherence to clean core criteria

1 Processes	2 Extensibility	3 Data	4 Integration	5 Operations

1 Processes
- SAP Best Practice Content
- Fit-to-standard Workshops
- Requirements management
- Custom processes design
- Business Process Monitoring
- Job and Automation Monitoring
- SAP Readiness Check

2 Extensibility
- Manage development (ABAP & BTP)
- Testing
- Agile Build
- Drive business continuity of extensions
- SAP Readiness Check

3 Data
- SAP Readiness Check
- Integration and exception monitoring

4 Integration
- Integration Documentation
- Manage integration artefacts in CPI
- Integration and exception monitoring

5 Operations
- Holistic and secure application and business process operations
- Integration in IT-SM processes
- Automated regression testing
- Release Management
- SAP Readiness Check

Outlook: RISE with SAP Methodology Dashboard

Key objectives

- showing customers the value of RISE for SAP by outlining unused potential in their current system

- having a clean core strategy is essential for leveraging latest features and technologies

- SAP supports holistically by getting to a clean core:
  - not only focusing on custom code but the impact that this custom code has on business processes
  - supporting customers in making decisions which steps to be done in which sequence (e.g. starting with low-hanging fruits like removal of unused custom code)
  - also focusing on highly-individualized business processes which are causing problems
 - bridging the gap from analysis to execution by task creation and distribution among the project team
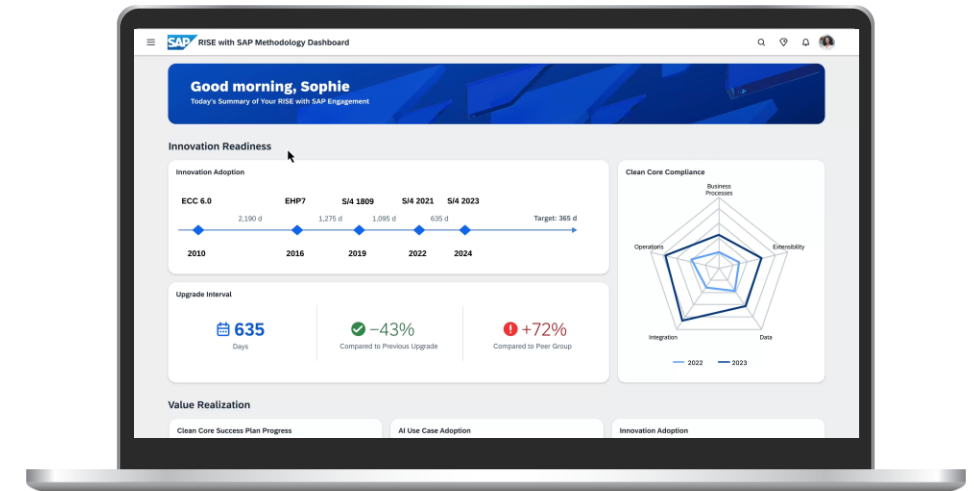

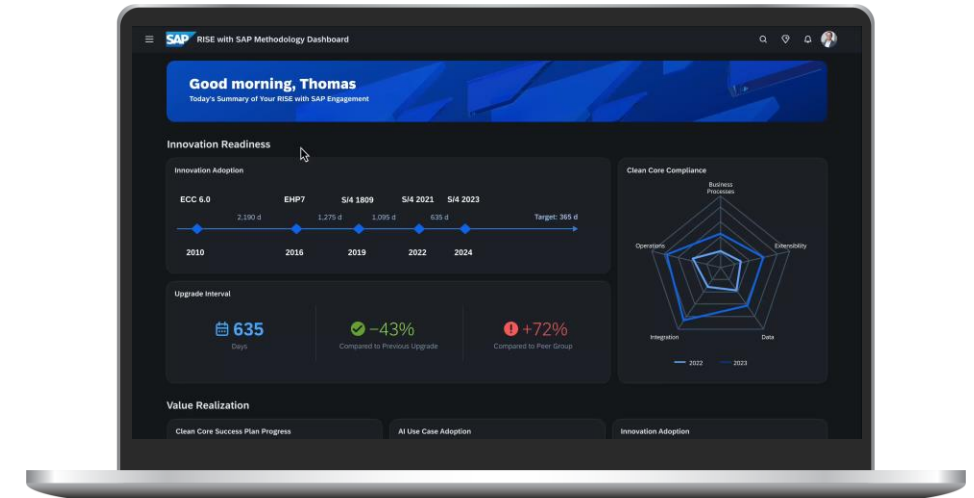

Key Takeaways

- SAP Cloud ALM is a robust solution for managing the complete application lifecycle, supporting business transformation initiatives through structured methodologies.

- Included in your Entitlement: Customers can utilize SAP Cloud ALM at no additional charge as it is part of their existing entitlements.

- It is integral to RISE with SAP and Clean Core initiatives, offering methodological support, dashboards, and quality checkpoints.

- Comprehensive support for all dimensions of Clean Core ensures a well-rounded approach to maintaining a clean and efficient SAP environment.

- Future enhancements promise continuous improvement, aligning with evolving business needs and technological advancements.
