# Agenda

- Cloud Integration
- Process Orchestration
- API Management & API Business Hub
- Monthly Webinar Revamp
- Q&A

# Cloud Integration

# Agenda

- Download & Upload of Message Mappings
- Testing an Integration Flow (Simulation)
- Integration Flow Design Guidelines and Patterns

# Download & Upload of Message Mapping

- Support for upload & download of message mapping along with all its dependent resources in ZIP format

Integration Flow

# Testing an Integration Flow (Simulation)

Simulation feature allows integration developers and business experts to easily **test the integration flow or parts of it**, during the development without the need to deploy and trace explicitly.

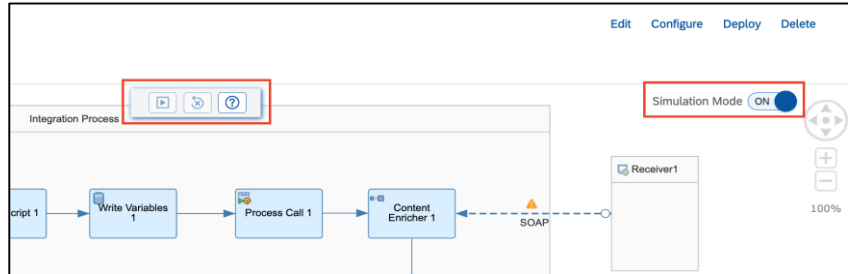

## Benefits:

- Helps integration developer to debug the configurations
- Option to provide simulation input or test data
- Allows the developer to simulate dependencies by providing mock simulation response
- Errors identified during the simulation are recorded along with recommendations to fix it.

# Process of Running Simulation

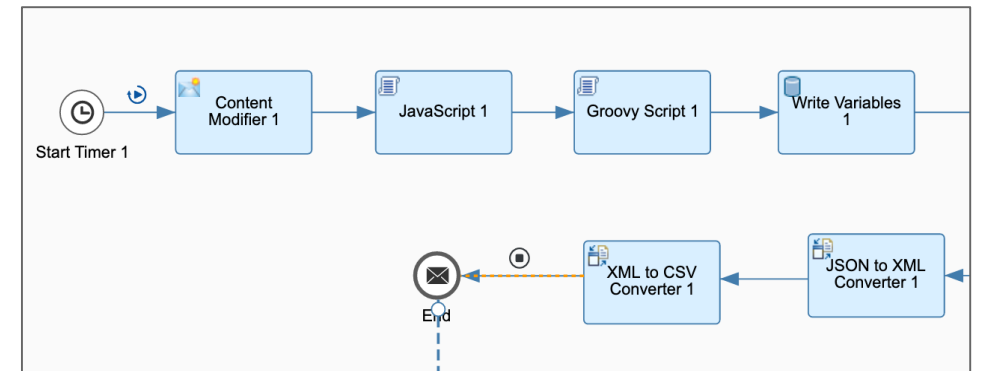

## 1. Switch "on" the Simulation Mode

## 2. Define the Start point

## 3. Define the End point

# Process of Running Simulation

## 4. Provide test data

## Integration Flow Design Guidelines - Run an Integration Flow Under Well-Defined Boundary Conditions

This integration package contains integration flows to illustrate the design guidelines for managing resources. More details can be found on SAP Help Portal.

## Enterprise Integration Patterns at SAP Cloud Platform Integration: Scatter-Gather

1 Like 953 Views 0 Comments [Edit](#)

SAP has recently published integration flow design guidelines and patterns for SAP Cloud Platform Integration that should help you to design the most common Enterprise Integration Patterns and to build enterprise-grade integration flows. The information is available on the [SAP Help Portal](#). Furthermore, we provide sample integration content packages on the [SAP API Business Hub](#). For more details, check out the announcement [blog](#) from a colleague of mine.

Regarding the patterns, while writing this blog I just noticed that [Bhalchandra Wadekar](#) had the same idea and actually has been started working on this great blog series [Enterprise Integration Patterns in Cloud Platform Integration](#) with the promise to blog about a new pattern every Sunday. Now, that we obviously worked on this in parallel, some of the patterns that are on his ToDo list have been already covered by us [here](#). So, @Bhalchandra, you may tick off those patterns from your list, this will save you some Sundays. On the other side, might be interesting how you would model the patterns since there might be different ways to do it. I am also grateful for all your effort, a lot of patterns that were on our list have now been covered by you already, so this saves a lot of time on our end. And it is definitely an added value for the community.

Anyway, with this blog I would like to start a blog series covering some of the patterns that we have published so far. Our intention however is not only to show how those patterns can be implemented on SAP Cloud Platform Integration but also to compare with how we

# Process Orchestration

# Agenda

- New features with 7.5 SP17
- Trial availability of SAP Process Orchestration

# New features with 7.5 SP17

- Process Integration Test tool
  - Run configuration stored on server
  - Schedule test suites and test cases
  - Maintain test suites on SAP UI5 user interface
- ESR in NWDS
  - Editor for adapter metadata
  - Support packages for software component versions
- Query modeler in NWDS for SAP SuccessFactors and OData adapters
- REST adapter enhancements
  - supporting principal propagation
  - accepting HTTPS calls only
  - supporting HMAC authentication
- Cloud integration runtime
  - Support for JDBC receiver adapter and new configuration UI for JDBC data sources
  - Support for RFC receiver adapter
  - New monitor for JMS queues

See [release notes](#)

# SAP Process Orchestration trial on SAP Cloud Appliance Library

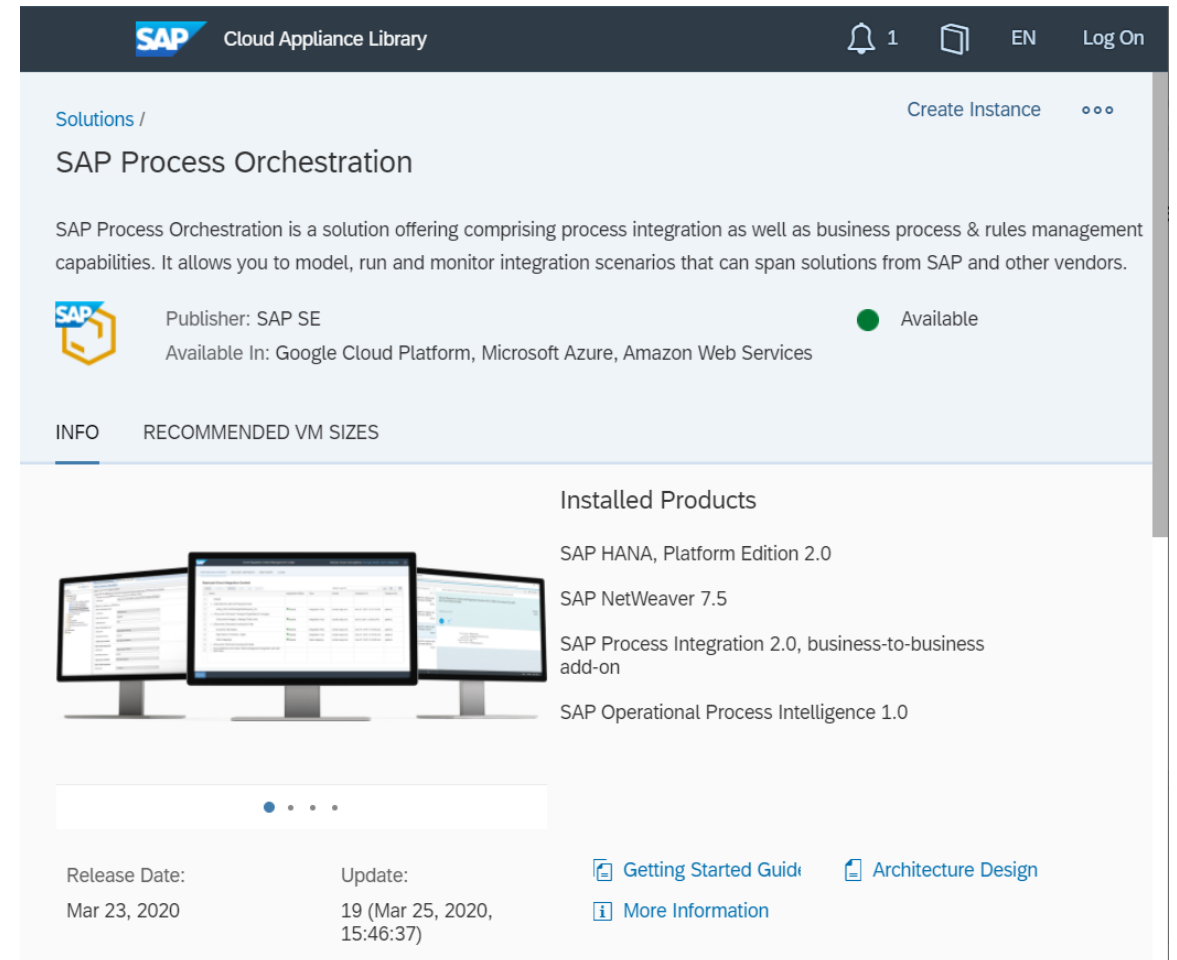

## What's in?

- SAP Process Orchestration 7.5 SP16
- SAP Process Integration b2b add-on 2.0

## Sample exercises

- B2B integration scenario: order to invoice
- Service composition scenario on built-in SAP Cloud Platform Integration runtime
- Process Integration Test tool use case

See [blog](#)

The screenshot shows the SAP Cloud Appliance Library interface. At the top, there's a dark blue header with the SAP logo, 'Cloud Appliance Library', a notification bell with '1', a book icon, 'EN', and 'Log On'. Below the header, the breadcrumb 'Solutions /' is on the left, and 'Create Instance' with a dropdown menu is on the right. The main title is 'SAP Process Orchestration'. A description follows: 'SAP Process Orchestration is a solution offering comprising process integration as well as business process & rules management capabilities. It allows you to model, run and monitor integration scenarios that can span solutions from SAP and other vendors.' Below this is the SAP logo, 'Publisher: SAP SE', and 'Available In: Google Cloud Platform, Microsoft Azure, Amazon Web Services'. A green dot indicates 'Available'. There are tabs for 'INFO' and 'RECOMMENDED VM SIZES'. The 'Installed Products' section lists: 'SAP HANA, Platform Edition 2.0', 'SAP NetWeaver 7.5', 'SAP Process Integration 2.0, business-to-business add-on', and 'SAP Operational Process Intelligence 1.0'. An image of three monitors displays SAP software. At the bottom, there's a carousel with three dots, and a section with 'Release Date: Mar 23, 2020', 'Update: 19 (Mar 25, 2020, 15:46:37)', and links for 'Getting Started Guide', 'Architecture Design', and 'More Information'.

# API Management

# Agenda

## **Theme : Focus on API Management deployment in Cloud Foundry**

- API Management (native) enablement on Hyperscalers – Timelines
- Adding Custom Roles that can be applied on Products

# API Management (native) enablement on Hyperscalers – Timelines

Date	Region	Comments
< 10 <sup>th</sup> Feb 2020	CF-EU20 / Azure EU NL	Available for customers
< 10 <sup>th</sup> March 2020	CF-US20 / Azure US West	Available for customers
10 <sup>th</sup> March 2020	CF-US21 / Azure US East	Available for customers
11 <sup>th</sup> March 2020	CF-AP10 / AWS Sydney	Only on demand
14 <sup>th</sup> March 2020	CF-BR10 / AWS Brazil	Only on demand
15 <sup>th</sup> March 2020	CF-AP21 / Azure Singapore	Available for customers
15 <sup>th</sup> March 2020	CF-JP20 / Azure Japan	Available for customers
22 <sup>nd</sup> March 2020	CF-CA10 / AWS Canada	Only on demand
22 <sup>nd</sup> March 2020	CF-JP10 / AWS Japan	Only on demand
31 <sup>st</sup> March 2020	CF-CN40 / Ali Cloud	Available for customers
May 2020 (planned)	CF-EU10 / AWS Frankfurt	Available for customers
May 2020 (planned)	CF-US10 / AWS US East	Available for customers
May 2020 (planned)	CF-AP11 / AWS Singapore	Only on demand

# Adding Custom Roles that can be applied on Products

- While publishing Products, you can define Roles for developers who can
  - a) Access the Product
  - b) Subscribe and create Applications for the Product
- Follows Cloud Foundry Role Collection

**Demo**

# Monthly Webinar Revamp

# Monthly Webinar **Revamp**

1. Introducing a new section called **“Interact with Integration Blackbelts”**
  - Speakers from customers/partners/stakeholders/consultants to share their innovations, solution architecture, best practices and integration patterns
  - Interested to present? Reach out to [finny.babu@sap.com](mailto:finny.babu@sap.com)
2. Reducing to one occurrence per month
3. Time: 1 hour
  - 40 mins - Product Updates
  - 15 mins - Interact with Integration Blackbelt
  - 5 mins - Q&A
4. Recordings in SAP HANA Academy YouTube channel

# Q&A

**Thank you.**
