Safeguard your company and processes with embedded GRC controls and monitoring.

3 Embedded Intelligent Finance Innovations

Critical resource-intensive tasks work exponentially more efficiently than ever or than any human could. **Example: SAP Cash Application uses machine learning** to learn from historical data to continuously find efficiencies and clear payments automatically.

Analyze actuals, forecasts and simulations to predict market trends and future results.

Example: SAP S/4HANA Cloud for Predictive Accounting and Closing predicts critical KPIs with an audit trail back to actual transactions in the system that aren't GAAP posting relevant yet.

Machine learning and predictive analysis automatically detect suspicious entries to drive down risk.

Example: SAP Business Integrity Screening detects

Example: SAP Business Integrity Screening detects and ranks data suggesting fraud or non-compliance with corporate policies.

Digital assistant provides voice-activated, in-context support in your application to boost workers' productivity. **Example: SAP CoPilot** Simply ask for name of the supplier and immediately get relevant information such as open POs, disputes, payments, postings.

How You Benefit

Oxford Economics found 73% of finance leaders agree automation is improving efficiency within their organization and throughout the company, freeing bandwidth for more strategic tasks.

Predictive analytics software is guaranteed to produce a return on investment (ROI). Even better the ROI compounds. The more you use it, the greater the return, SAP benchmarking found.

An organization's typical occupational fraud loss is 5% of its annual revenue, according to research by the Association of Certified Fraud Examiners.

According to a Gartner Study

by 2020, the average person will have more conversations with bots than with their spouse.
