

A woman in a hard hat and work clothes, overlaid on a background of stacked shipping containers. The woman is a stylized illustration with long, wavy hair, wearing a white hard hat and a white collared shirt with dark suspenders. She is smiling slightly. The background shows a large yard filled with stacks of shipping containers in various colors (red, blue, orange) under a bright sky with some clouds. A large, stylized purple arrow graphic points from the left towards the woman.

SAP Innovation Day for Supply Chain

Draw Your Future

Digital Manufacturing

Be the Master of your Future

“Manufacturing is difficult, the difficulty and value of manufacturing is underappreciated.”

Elon Musk

Customer imperatives

Business transformation

Supply chain resilience

Sustainability outcomes

Resilient businesses need digital operations and supply chains built for speed and flexibility

Agility

Proactively and profitably sense and respond to market dynamics and disruptions

Productivity

Deliver high-quality, mass-produced or make-to-order products faster

Connectivity

Data driven enterprise and collaborative trading partner relationships

Sustainability

Actively manage your environmental and community impact

Agility is required to survive in an ever changing world

Manufacturers need to become agile and dynamic

Responsive

ability to respond dynamically to changes in customer demand, market conditions, supply chain or production issues

Flexibility

in terms of product design, production processes, and supply chain management

Scalability

ability to scale operations up or down quickly and efficiently in response to changes in demand

Collaboration

manufacturing relies on effective collaboration and communication across different departments, teams, and stakeholders

Improvement

culture of continuous improvement, constantly seeking ways to enhance processes, reduce waste, and increase efficiency

Resilience in Manufacturing

Agility in Manufacturing

Sense

Respond

Adapt

Productivity is the focus for manufacturers

Innovation and Automation driven gains

Efficient Processes

streamlined and optimized production processes can significantly enhance productivity in manufacturing

Automation & Integration

automation and integrated technology, such as robotics, artificial intelligence, and Internet of Things, can greatly improve productivity

Continuous Improvement

adopting lean manufacturing and continuous improvement initiatives drives productivity

Effective supply chain management

optimizing inventory, improving supplier relationships, and implementing just-in-time manufacturing practices, reduces lead times and risk

Skilled & safe workforce

skills gap and labour availability impacts performance. Investing in re-skilling, automation & training improves safety, performance, skill attraction and retention

Sustainability – Efficiency

Availability

The Process's Actual operating time as a percentage of Scheduled operating time. This is often referred to as Uptime or Runtime

X

OEE

=

Performance

Based on Process throughput, Performance is a measure of expected time to produce throughput (Process Capability) compared to Availability time

X

Quality

The total Good Units produced as a percentage of the Throughput. Also referred to as First Pass Yield (FPY)

Overall Equipment Efficiency

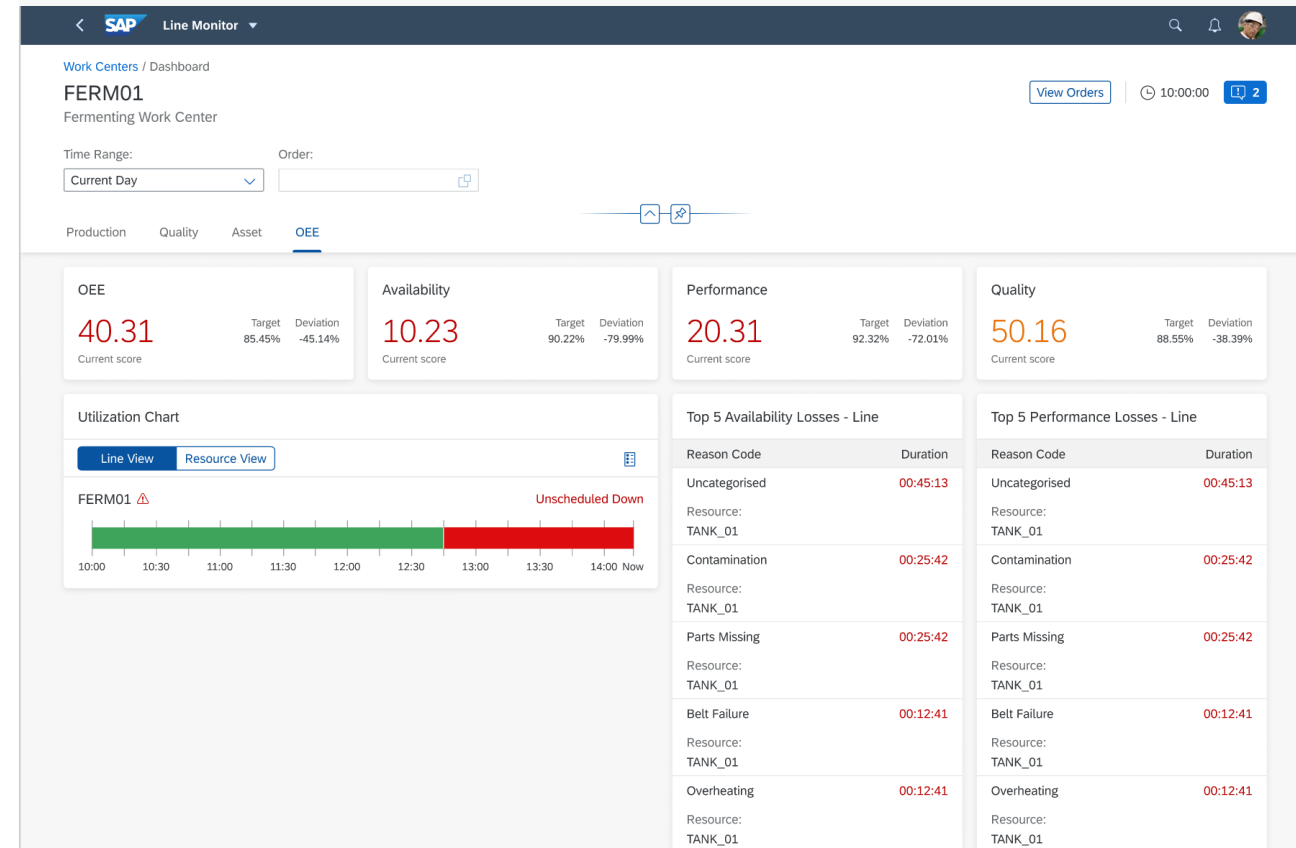

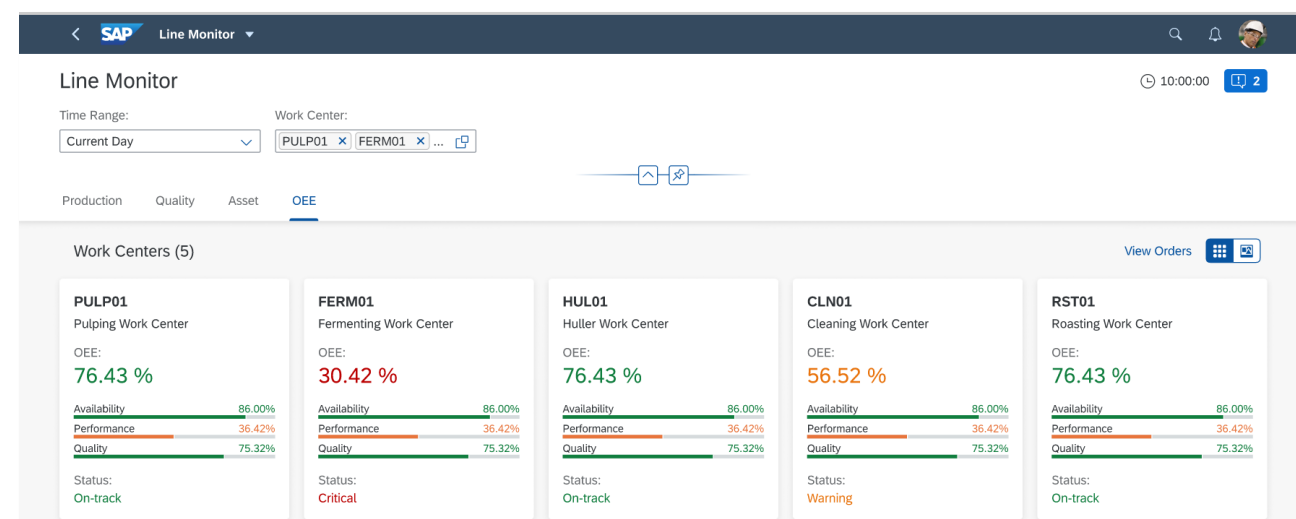

Production Line Monitor

Real-time Performance Indicators

USE CASES

- SAP Digital Manufacturing provides live operations views of **production attainment**.
- Production operations centric views to ensure a **tactical and prioritized** response to the situation is highlighted and coordinated around the **root cause**.
- These same tactical views that operations has **rolls up to the strategic level** views to ensure that the daily headaches that operations experiences are properly represented to the enterprise.

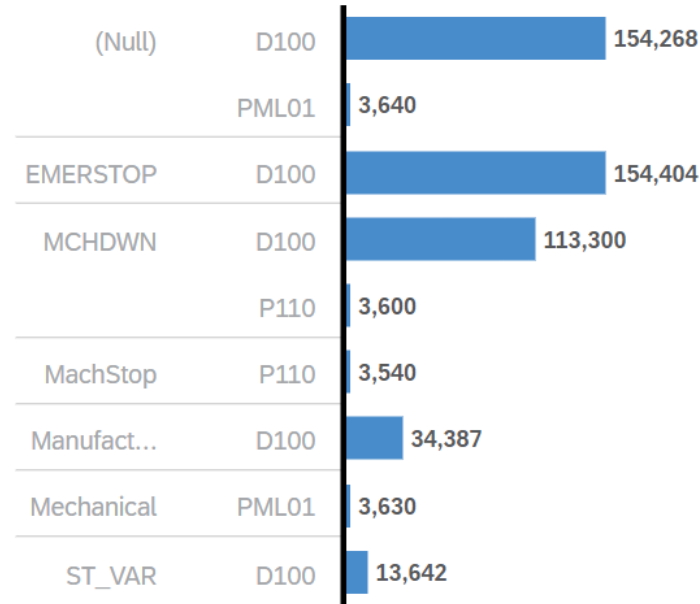

this DownTime Analysis report summarised the production losses and short stoppages affecting production performance.

Connectivity is required in a data driven enterprise

Manufacturing need to be connected in real-time

Enterprise

single source of truth, driving everyone in the same direction is delivered by integrated processes, real-time & accurate data, automation and elimination of data silos

Customer

bi-directional collaboration to understand requirements and deliver on commitments and expectations

Supply Chain

synchronized with fluctuations in demand, changes in requirements, sourcing, disruptions & unexpected events

Automation

increase data availability, visibility and accuracy, reduce data entry and latency by communicating with processes and equipment

Circular economy

support new business models, in service support, repair, re-manufacturing, recycling & reuse. Increase life span, durability and repair through design

DM Manufacturing Automation | Vision

IT/OT convergency

Manufacturing Automation helps customers adapt **business dynamics** with an **Industrial IoT** solution.

Converge Business and Automation

Connect the world

Integrate **asset information** between various sources and consumers.

Automate your execution

Production processes to orchestrate services from various systems.

It brings **Business Processes (IT)** and **Automation Systems (OT)** together to support customer **mission critical manufacturing operations and agile innovation**.

Innovate Business

Business objects

- Resources, work centers
- Materials, orders, ...

End to end **Business Process** lifecycle management:

- Reflecting manufacturing processes from logistics perspective (MRP, production planning, scheduling)
- Process transparency
- Flexible process change to fulfil business dynamics

Automate Execution

Data and service connectivity

- PLC, DCS, SCADA, ...
- OPC, MQTT, REST, ...

Automation sequences to integrate and support fully automatic manufacturing operation:

- Reflecting manufacturing processes from technological perspective
- High speed high volume production
- Modular production
- Legacy hard wired operations

Manufacturing Automation | Digital Twin Use Cases

From the application's point of view, the production connectivity model with its digital twins replicates the physical world.

Read indicators of the digital twin object

(or measurements/ sensor values on the physical objects) in order to:

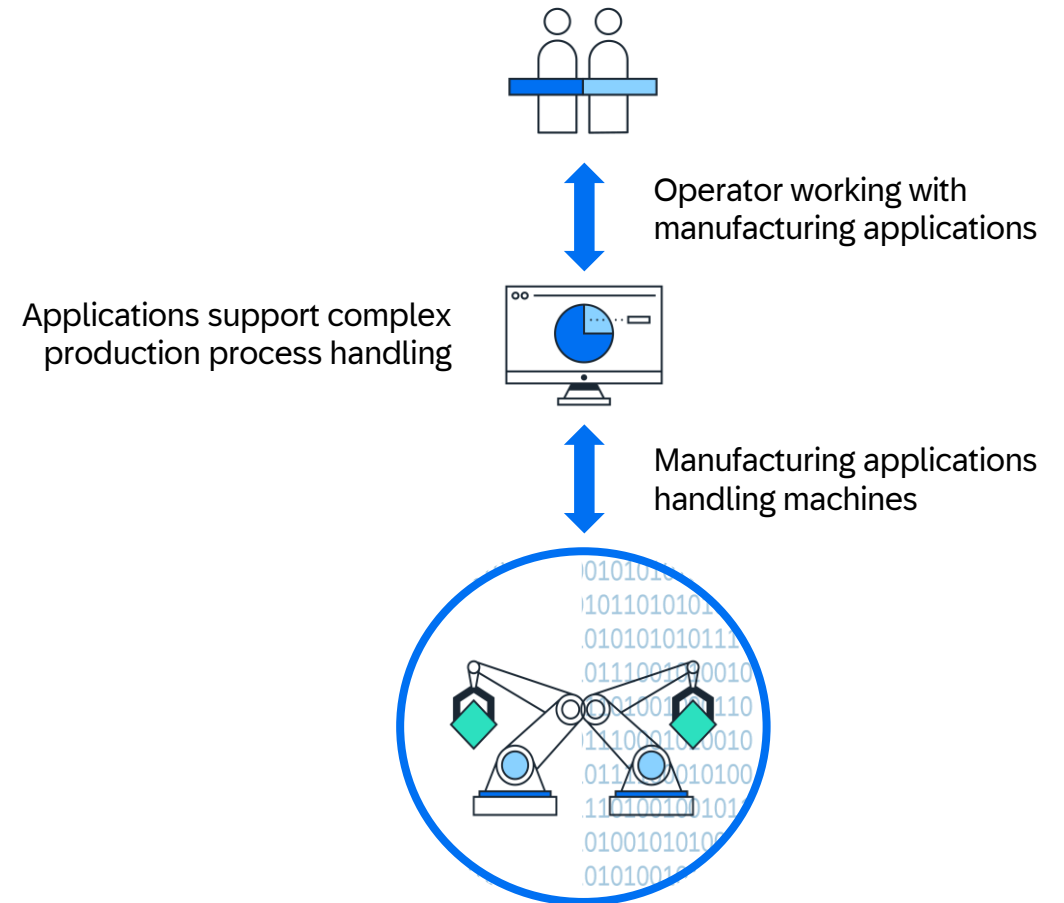

- Visualize them on the application UI. (e.g. a dashboard or an interactive work instruction on the operator's UI)
- Store them in the database (e.g. DMC product genealogy or the production log)
- Aggregate and evaluate them (e.g. calculate a moving average, OEE, or any other KPI)
- Observe them and take action if any condition becomes true (e.g. run a non-conformance check if the temperature was too long too high)

Write indicators to the digital twin object

- Write a set point (e.g. the target temperature of an oven)

Call services on shop floor systems

- Call services that are related to an asset (e.g. orchestrate a sequence of service executions; see production process design)

Digital Twin, reflecting physical reality

Sustainability is more relevant than ever

Companies need to act on sustainability now

Customers

79%

of buyers are changing preferences based on sustainability

Investors

50%

of all professionally managed assets will be ESG-mandated by 2025

Employees

71%

of job seekers want to work for environmentally friendly employers

Regulators

>600

there are currently over 600 ESG reporting provisions globally

Companies

70%

of EBITDA could be at stake from sustainability challenges

SAP's Manufacturing Architecture along ISA-95

The **Industry 4.0** Revolution

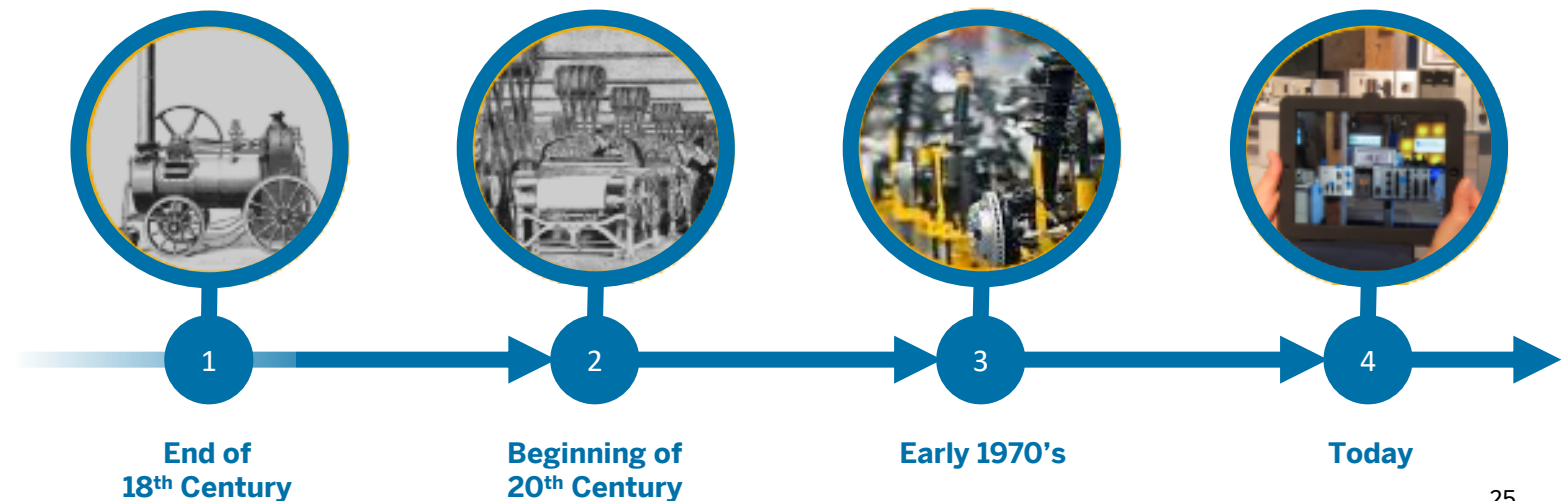

Design Principles

- Interoperability
- Information transparency
- Technical assistance
- Decentralized decisions

Disruptive **innovations** applied in manufacturing promise to trigger a new **industrial revolution**

While the theme of Industry 4.0 revolves around **connectivity** through cyber-physical systems, Industry 5.0—while also aligned with platforms made possible by Industry 4.0—also addresses the relationship between “People and machines”

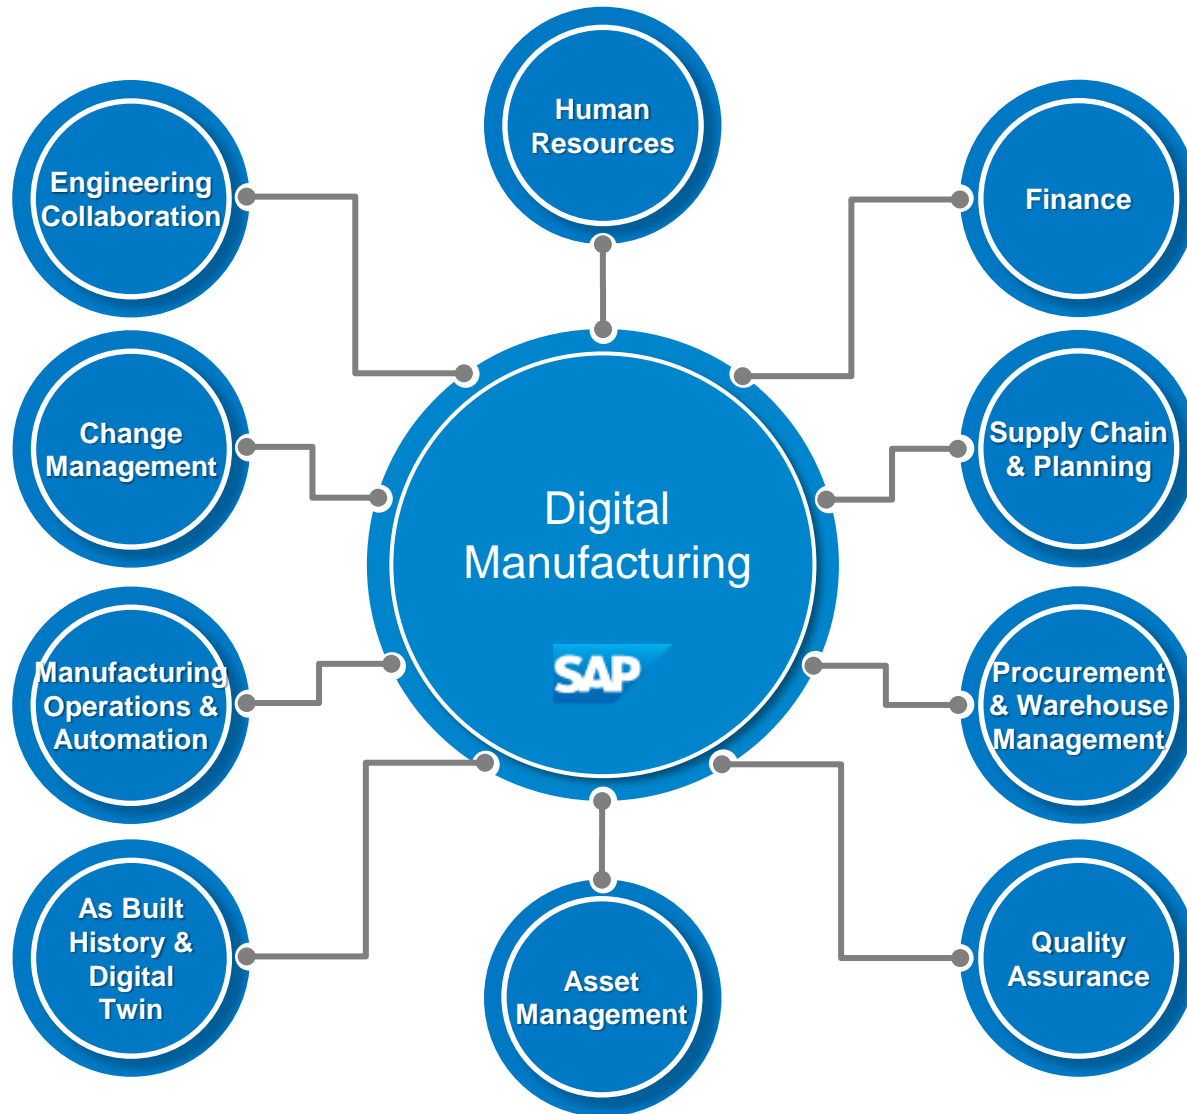

ref: ISA.org

Solution Overview

SAP Digital Manufacturing is a Game Changer

Improve Operational Efficiency by **eliminating data silos**, enabling end-to-end process orchestration from design to delivery

Increase Agility with **stream lined and automated processes**

Reduce Manufacturing Costs with **unobstructed visibility** to relevant business information

Innovate and Automate with **Industry 4.0**, extending the digital thread **end-to-end across the digital supply chain**

Drive Operation Excellence driven by **Manufacturing Insights** and **Process Governance**

SAP Digital Manufacturing

SAP Digital Manufacturing is a solution optimizing manufacturing operations using state of the art technologies, for discrete and process industries. It integrates seamlessly with enterprise and shop floor systems to provide real-time visibility, control, and orchestrate the manufacturing process end to end.

Dispatch & Scheduling

Labor Management

Work In Process Management

Shop Floor Logistics

Quality Management

Insights & Performance Management

Industrial Automation

Orchestrate labor, resource, tools in shop floor to achieve maximum availability

Benefit from detailed planning, scheduling, availability, tracking & execution

Benefit from fully configurable operator dashboards and production process designs

Orchestrate intra-logistics between manufacturing line and warehouse

Support a closed-loop integrated quality management with quality collaboration

Gain deep production insights for significant process improvements using embedded intelligence

Ensure full data and process connectivity between the shop floor and business applications

React quickly to production events using the built-in intelligence

Improve tools and labor operations

Realizes manufacturing execution by managing shop orders

Enable dynamic production operations

Use business networks and enable customers to produce and deliver high-quality products

Optimize manufacturing productivity by measuring Overall Equipment Effectiveness

Create production processes that link shop floor and business systems

Dispatching and Monitoring

Solutions

Business Challenges

Gap between **enterprise-level** production planning & scheduling and **shop floor execution**

Lack of real time visibility into shop floor capacity, assets, usage, downtimes etc.

Ineffective capacity utilization of machines, workforce & tools

Highly manual dispatching process without data driven system support for supervisors

Siloed labor planning & management

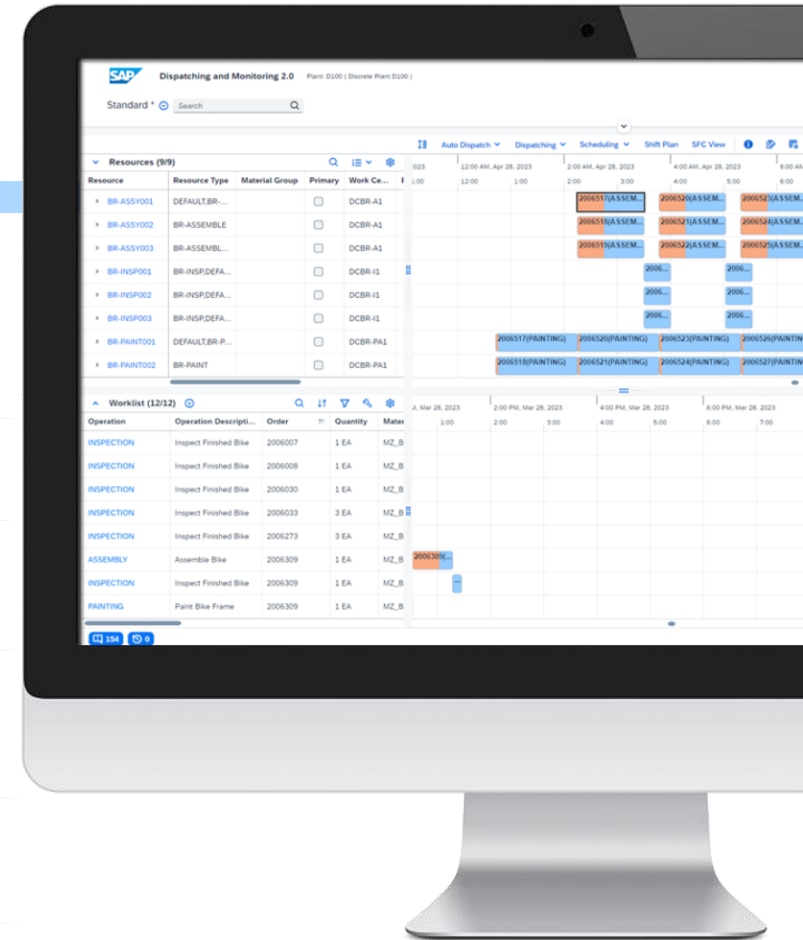

Interactive scheduling/dispatching tool for plant managers and supervisors at MES layer

Business process integration with real time planning, execution and logistics systems

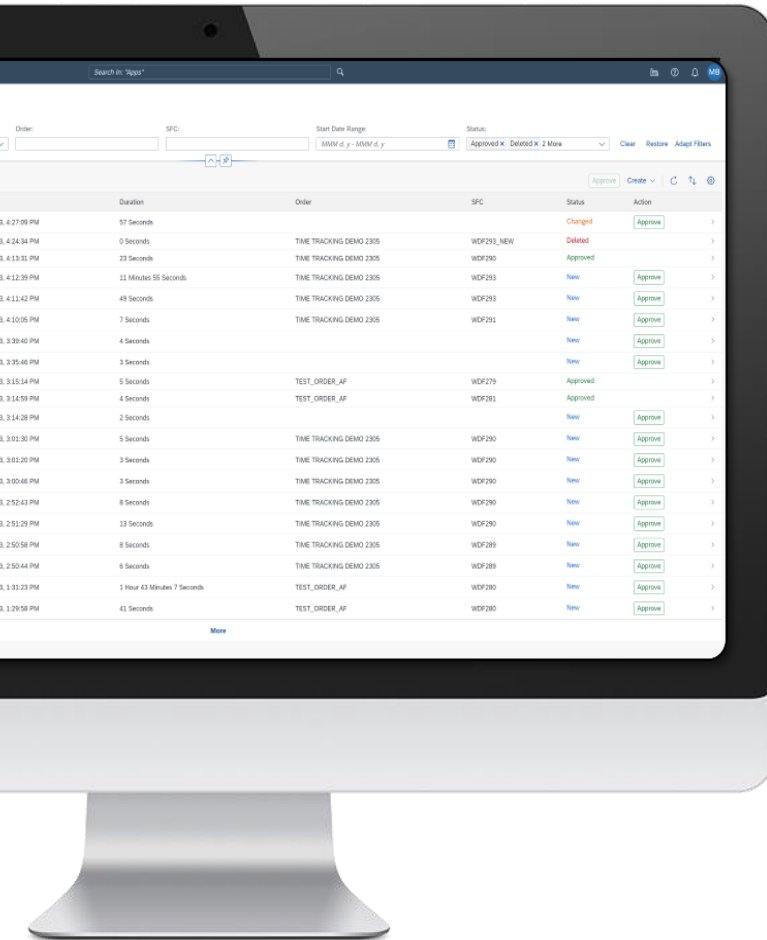

Automated scheduling and recommendation increasing capacity utilization

Robust & intelligent algorithms to reduce lead time, load balance, minimize set up time etc.

Workforce management and integration with HRMS unified data across systems

Scheduling and Time Tracking

Business Challenges

Inefficient workforce scheduling due to lack of information such as availability, skills

Lack of **accurate time** data to determine real product cost

Absence of **labor transparency** for both direct and indirect times

Lack of **operator performance** transparency causing inefficiencies.

Scarcity or fragmented time data across different **systems**

Solutions

Holistic and integrated management of workforce

Accurate order costing based on actual times recorded

Increased **visibility** of non-value added time

Efficient scheduling based on actual shop floor data and detailed workforce information

Ability to provide time data to 3rd party applications such as billing or time & attendance systems

Process Orchestration

Business Challenges

High operational costs due to **inefficiencies** and **excess waste**

Product **quality losses**

Lack of production transparency outside the shop floor

Logging and **controlling** critical activities during production

Running 24/7 operations

Solutions

Fully configurable

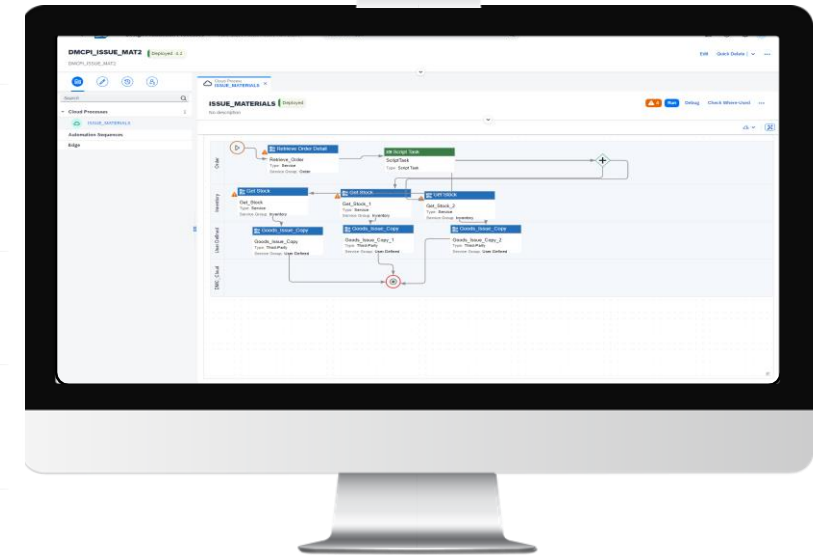

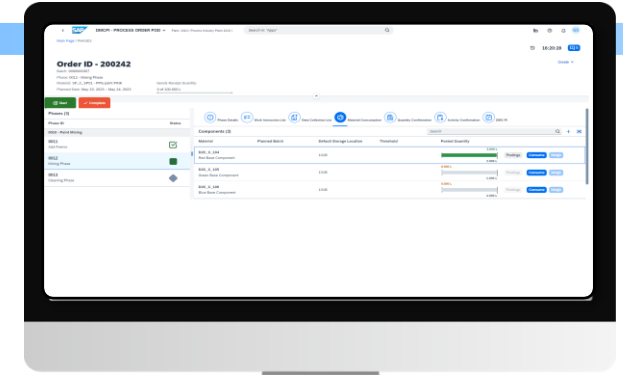

Production Operator Dashboard (POD) optimizing the operator user experience

Early detection/capturing of quality defects reducing scrap/repair costs

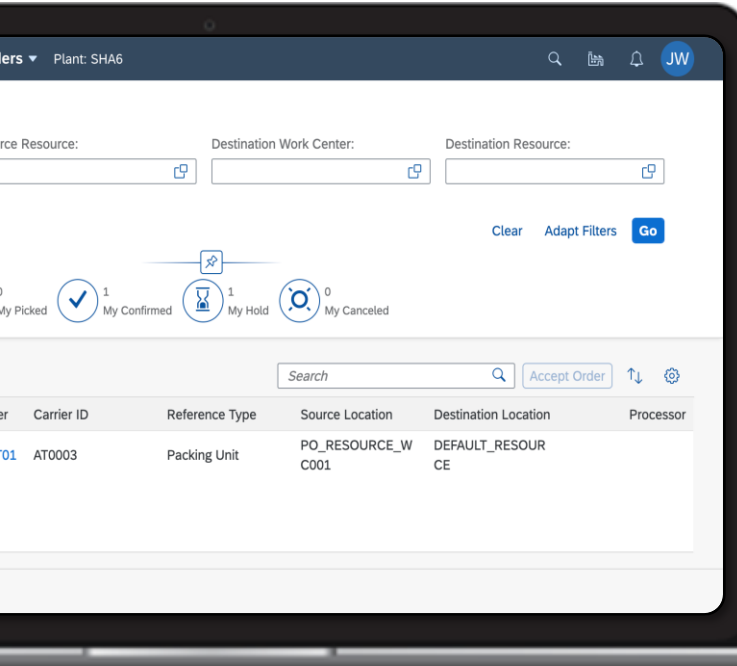

Comprehensive WIP tracking throughout the production process, ensuring complete transparency and enabling precise process control

Seamless integration with SAP ERP for comprehensive end-to-end visibility

Enables 24/7 operations through **high availability** and **edge services**

Inventory

Business Challenges

Inventory inconsistency between ERP/EWM and shop floor

Low **transparency** of production supply and execution

High cost and low efficiency of **material distribution** in shop floor

Hard to track and manage **WIP transport**

Lack system integration with different types of inventory management

Solutions

Improved inventory accuracy by **real time integration** posting with SAP ERP/EWM

With **Manage Floor Stock** app, for local and ERP/EWM integrated materials, providing higher transparency on the materials supply and consumption

With **staging** capability, shop floor can trigger exact material requests to warehouse in precise time line and storage location which lower the cost with high distribution efficiency

With **Logistics Order** capability, would be easy to manage and execute WIP transport, increasing flexibility and WIP processing

Out of box integration capability to SAP ERP and EWM system

Quality Management

Business Challenges

Manual inspections leading to **late detection of issues**

Unsustainable analysis and **documentation** of quality issues increase the risk of re-occurring and higher quality costs (CoQ)

Information silos **prevent** data-driven **root cause analysis**

Case-by-case **compliant handling**

Staying compliant with global and standardized **QA guidelines**

Solutions

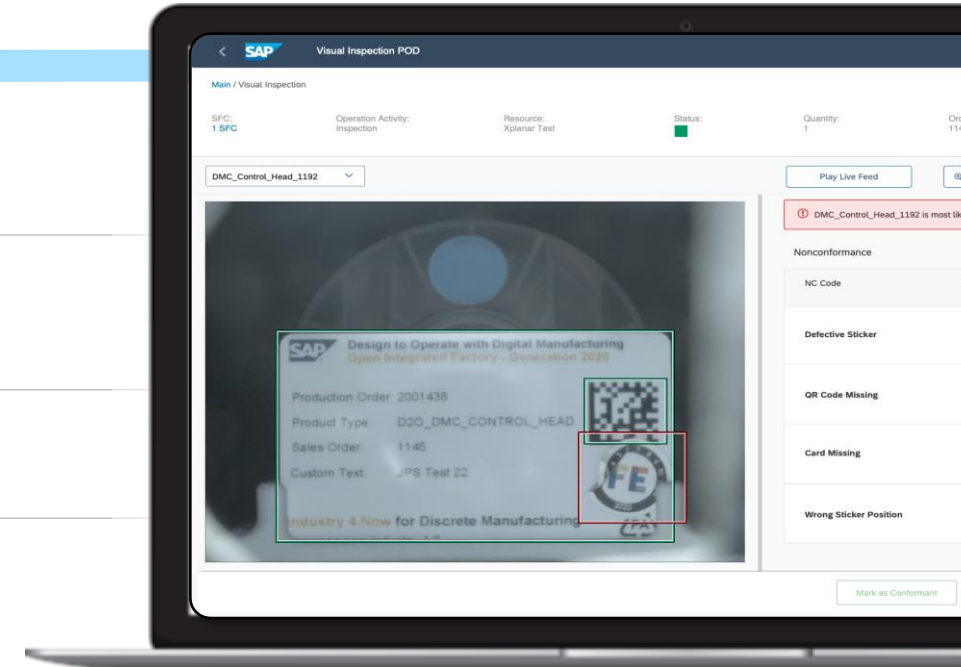

Automated and **intelligent** digital **quality operations**

Record deviations and **trigger follow-up process** at the time of detection

Fast, reliable and **collaborative** identification of root causes supported with data

Learning organization with **continuous improvement**

Global compliance with industry standards

Insights and Performance Management

Business Challenges

Solutions

Unforeseen disruptions and no transparency on root cause

Critical information is available in real-time

Distributed systems and non-harmonized data causing **information latency**

Capturing of all **master data and events** occurring during production processes

Insufficient data for decision making

Providing harmonized view on shop floor data from multiple sources enabling holistic analysis

Lack of transparency on production process and operational performance

Enabling business users to **derive reports** and **KPIs**, and **identify root cause**

Lack system integration with different types of inventory management

Transparency on the shop floor reducing inefficiencies and opportunity costs

Industrial Automation

Business Challenges

Shop floors are made of a world of many **different heterogeneous systems**

There is **no full integration** between all the shop floor systems and their leading business app.

Production execution on shop floor is **complex** and not fully manageable by one system end-to-end.

Processes are **disruptive**, not fully integrated with each other.

The current **actual status of production** is **not transparent** end-to-end in one system.

Solutions

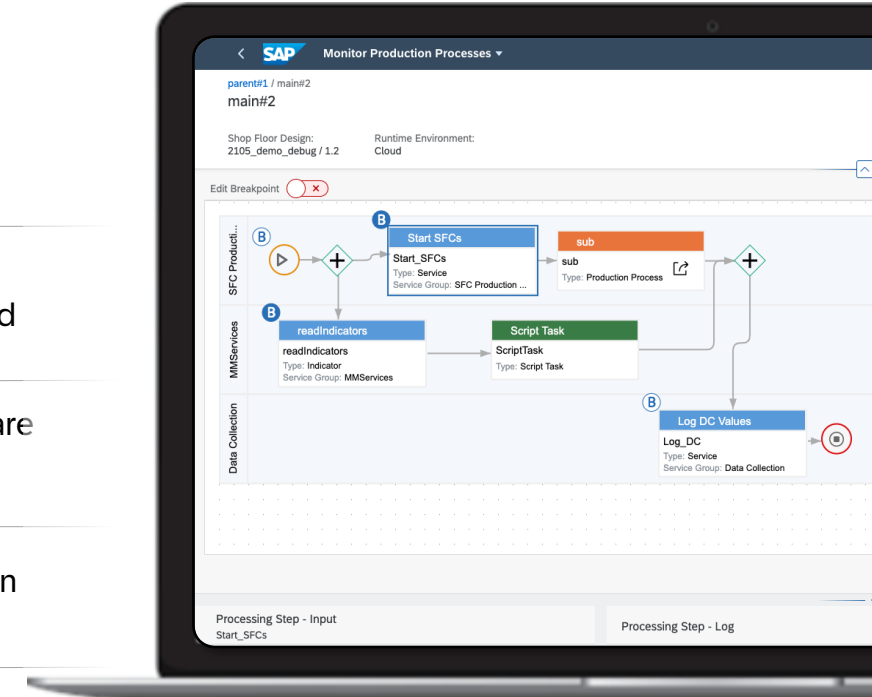

DM implements the network of all systems and their interoperability **in one model**.

Production Connectivity Model controls the overall network of all systems on shop floor and in the cloud.

Processes, be they on shop floor or top floor, are **modeled in the same way** and **interact** with each other.

Create, manage and **visualize** the processes in one **graphical tool** to keep the overview.

DM keeps centrally the **full overview** on all activities and resource states on shop floor
