Prepare your Selective Data Transfer to SAP Cloud ALM with SAP Readiness Check for SAP Cloud ALM

A SAP **astridtschense**
Product and Topic Expert

⊘ Wednesday

[👍 2 Kudos]

Dear All,

Note: This blog describes the addition of the Scope Analysis for Selective Data Transfer capability available within SAP Readiness Check for SAP Cloud ALM. You may refer to this blog for an overview of the other checks available in SAP Readiness Check for SAP Cloud ALM.

Today, we are excited to announce that SAP Readiness Check for SAP Cloud ALM has been extended to provide insights into solution documentation data in an SAP Solution Manager system in preparation for a solution documentation Selective Data Transfer project.

With the Selective Data Transfer tool in SAP Solution Manager, you can select and extract the data in a format compatible with SAP Cloud ALM. The process to transfer the data is structured in the following steps:

- Step 1: Process hierarchy (folder, scenario, organizational unit, master data)
- Step 2: Process steps and executables
- Step 3: Business processes and diagrams
- Step 4: Documents and test steps

The new **Scope Analysis for Selective Data Transfer** allows one to view all solutions and branches in the analyzed SAP Solution Manager system, providing the necessary insights to select a source branch for a Selective Data Transfer project from SAP Solution Manager to SAP Cloud ALM.

Scope Analysis for Selective Data Transfer - Overview

The overview in the dashboard summarizes the total number of solutions and branches in the SAP Solution Manager system. Additionally, the bar chart displays the total number of changes to the elements within the branches. You can switch between views showing the last 6 or 12 months to see the aggregated number of changes to branches within these two time periods. The chart displays the top 5 solutions, based on the number of changes. When you navigate to the detail page of this analysis, you can see the aggregated number of changes for all solutions.

[👍 1 Kudo]

SAP Cloud ALM and Integration Suite

SAP Cloud ALM supports numerous SAP Products, including Integration Suite and monitoring. It provides a much more comprehensive UI than the standard Integration Suite Message Processing Log, and allows users to set up alerting in other third party systems with relative ease.

Introduction

This blog is the second in a three part series that introduces how to enable SAP Cloud ALM for your Integration and Exception Monitoring needs. This first blog will discuss how to provision SAP Cloud ALM, the second blog will discuss connecting SAP Integration Suite to SAP Cloud ALM, and the third blog will discuss connecting third party incident management to SAP Cloud ALM.

First Blog - https://community.sap.com/t5/technology-blogs-by-members/sap-cloud-alm-provisioning/ba-p/13708430

Second Blog - This Blog

Third Blog - https://community.sap.com/t5/technology-blogs-by-members/configuring-sap-cloud-alm-for-integration-a...

BTP Cockpit Configuration

To connect SAP Cloud ALM to Integration Suite, an endpoint that can retrieve the Message Log and Artifact Health must be create in BTP Cockpit. This is a straightforward and standard process, except require adding special Role Groups to the Service Instance in BTP. For a more in-depth guide, follow this link on Integration Suite – Accessing Cloud Integration Runtime

Prerequisites

- IAS & Users Configured
- BTP Cockpit S User / Global Account Configured
- Cloud Foundry Enabled and User Permissions for managing Cloud Foundry
- Integration Suite Tenant Configured

New Comment function for issues and action in Cloud ALM for Service

U SAP **Ulrike_Hormann**
Associate

⊘ 3 weeks ago

[👍 0 Kudos]

Initial Situation

During an SAP service delivery a few issues were identified. SAP has provided the description of these issues together with the information which actions you should take to resolve these issues as part of the service result. These issues and actions are now available in the Issues & Actions Management app in SAP Cloud ALM for Service.
You now want to document your progress as you are working on completing the recommended actions and resolving the identified issues.

Access Issues / Actions

In the SAP Cloud ALM launchpad, go to section "Service" and select the tile "Issues and Actions Management".
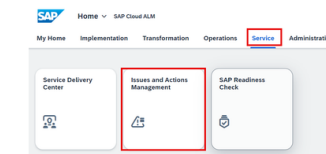

This opens the Issues and Actions Management App. In the app, find and select the issue you are working on.
