DEMO CALM FEATURE WITH TRANSPORT

HOW COMPLICATED ARE THE CURRENT CHANGES / IN WHAT FREQUENCY DO CHANGES MOVE THROUGH THE SYSTEM LANDSCAPE?

- How complex is your system landscape? (2 tier, 3 tier, 4 tier, x tier?)

  - Answer: SAP Cloud ALM supports 2 tier, 3 tier, 4 tier. More systems are technically possible, but not recommended due to current process flow.

- How frequent do need changes in your landscape? Once per week, once per day, 15 a day? Can objects overtake during the change process? Do the changes have impact to each other? (Cross References?)

  - Answer. There is no CSOL, DGP or Xref available in the current version of SAP Cloud ALM. We advise to use only non-critical system landscapes with low frequent number of transports to be used for productive Change Control usage. But we recommend … **start using it!**

New status "Successfully Tested"
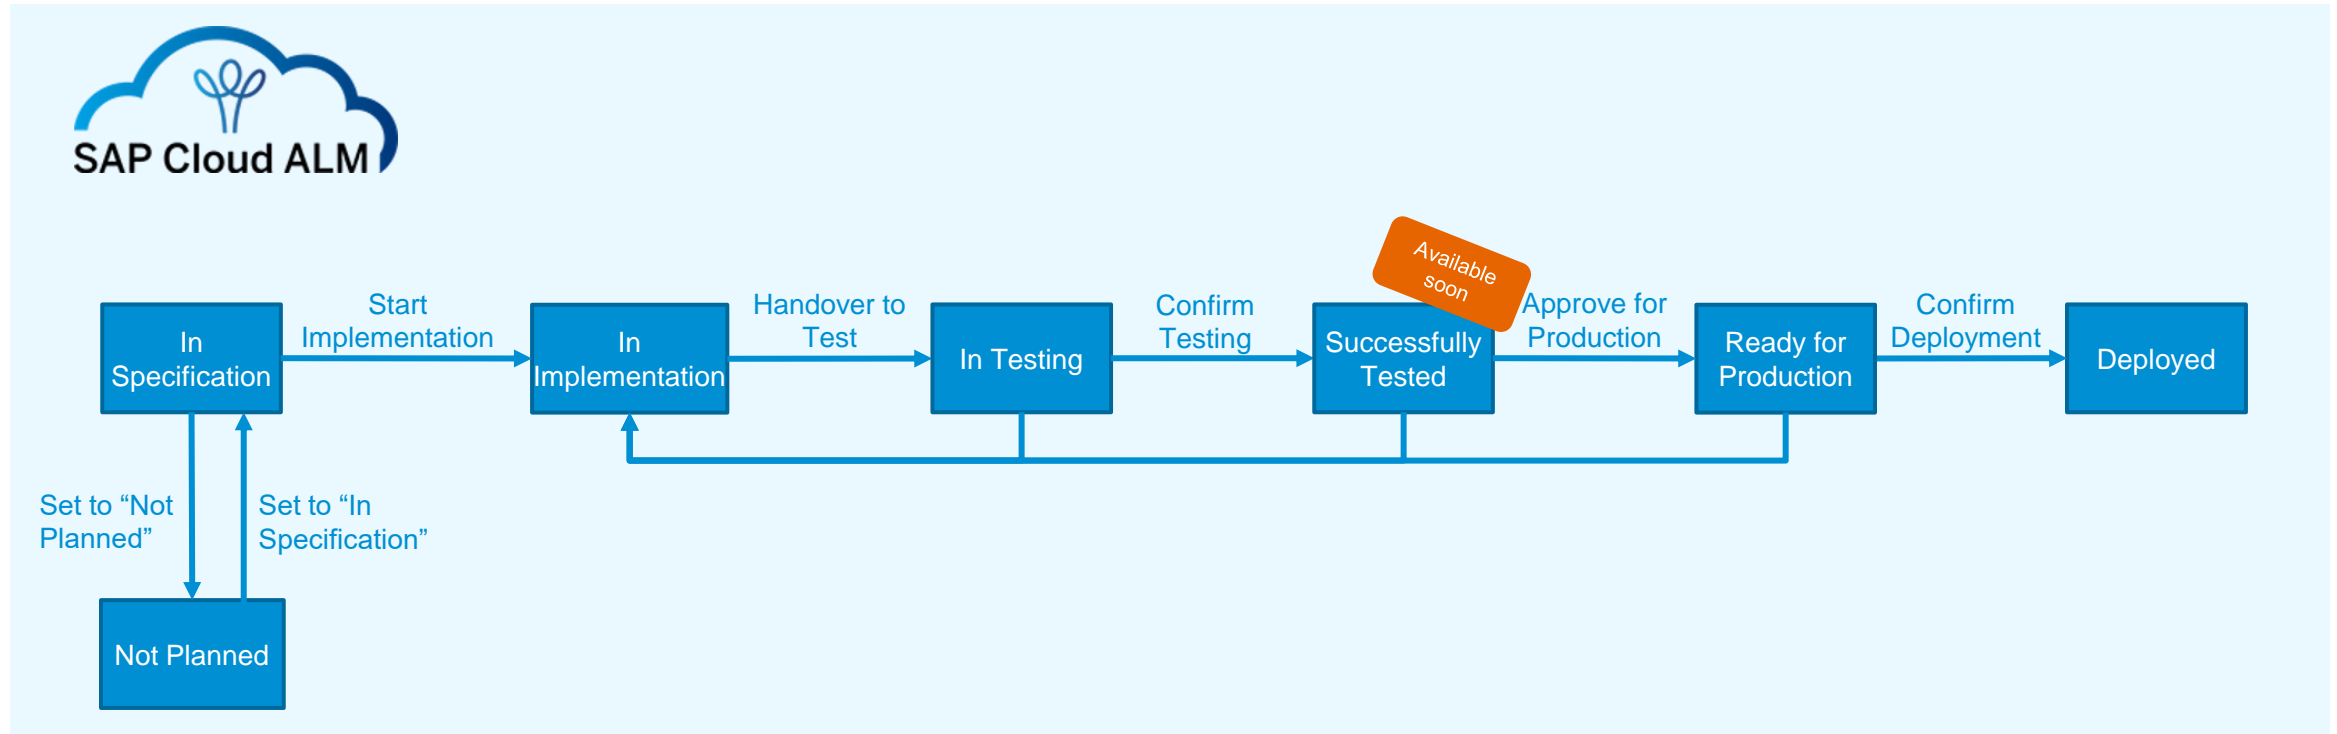

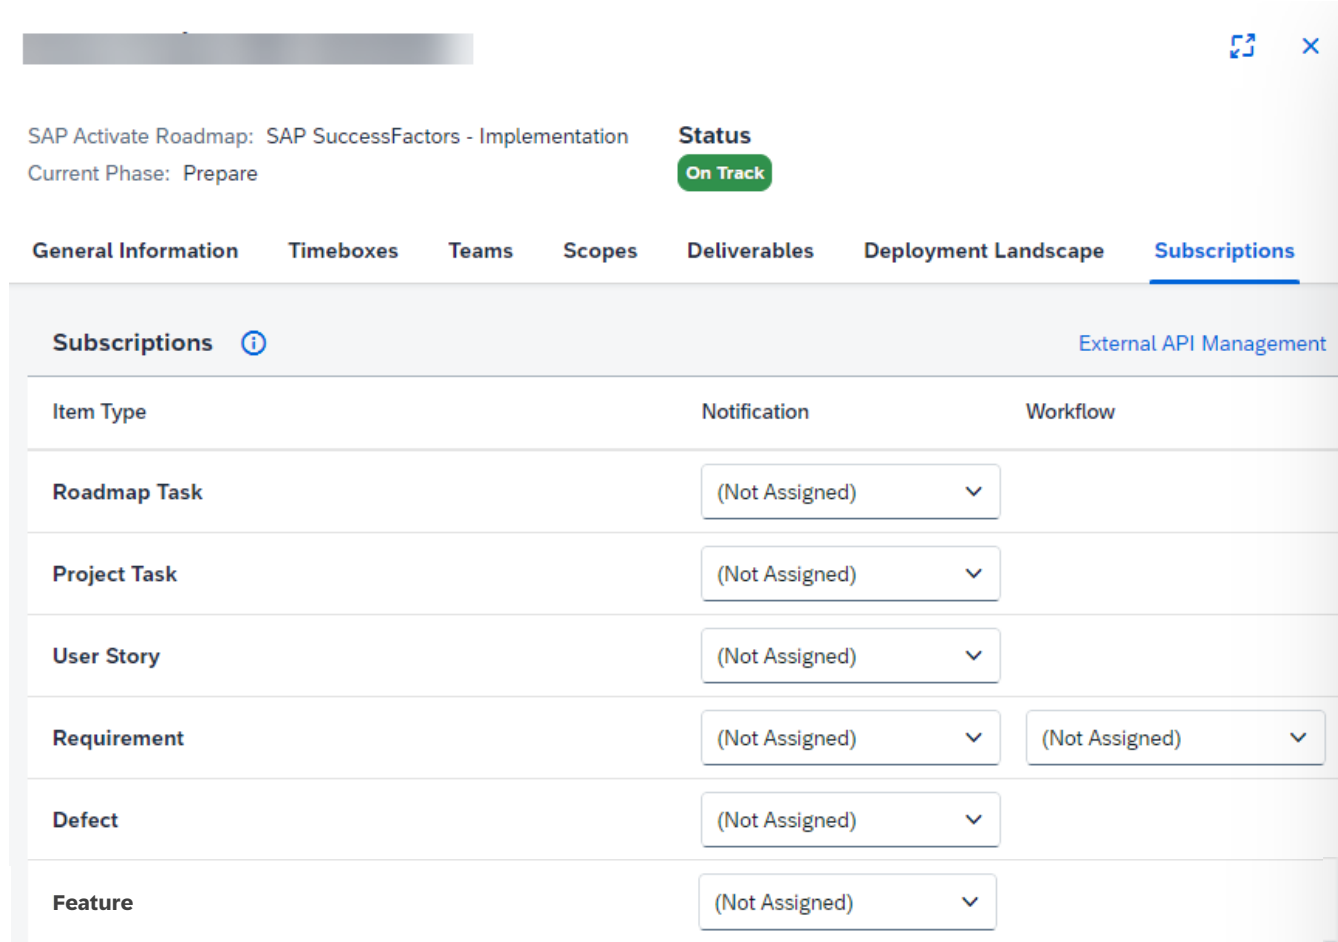

Outlook
Resource Change API for Features

- With the Resource Changes REST API, you can watch resources in application lifecycle management and you are notified when those resources are changed.

- The API models a web-hook that is used to react on value changes in SAP Cloud ALM entities that are exposed as REST resources

  - It informs external systems about which resources are changed and how.
