Further information

Migration motivation

SAP HANA Cloud | Architecture

SAP HANA Cloud | Motivation

Benefits of moving to SAP HANA Cloud

Scalability

Flexible Upsizing and Downsizing

BTP

Fully integrated within our Business Technology Platform

HA/DR

High Availability features with Disaster Recovery capabilities

Flexible

Fully flexible managed cloud service

Multi-Model

Use ML/AI, Graph, Doc Store, Geospatial with HANA Cloud

TCO/ROI

Faster ROI and continuous reduced TCO with HANA Cloud

SAC

Support of Live Connection with SAP Analytics Cloud

SCC

Support of SAP Cloud Connector with HANA Cloud

Data Lake

Rapid provisioning of Petabyte scale storage

Hybrid

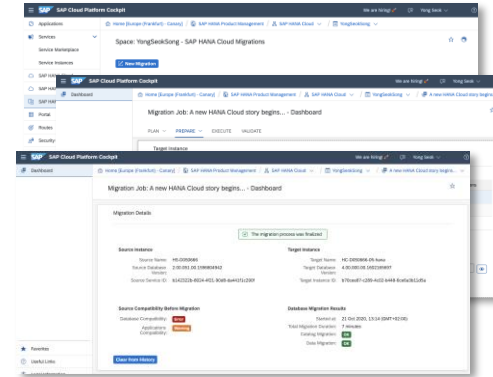

Hybrid Cloud architecture with on-premise and cloud data sources

Future proof

Long-term support for HANA Cloud and regular delivery of innovative features

SAP HANA Cloud | Motivation

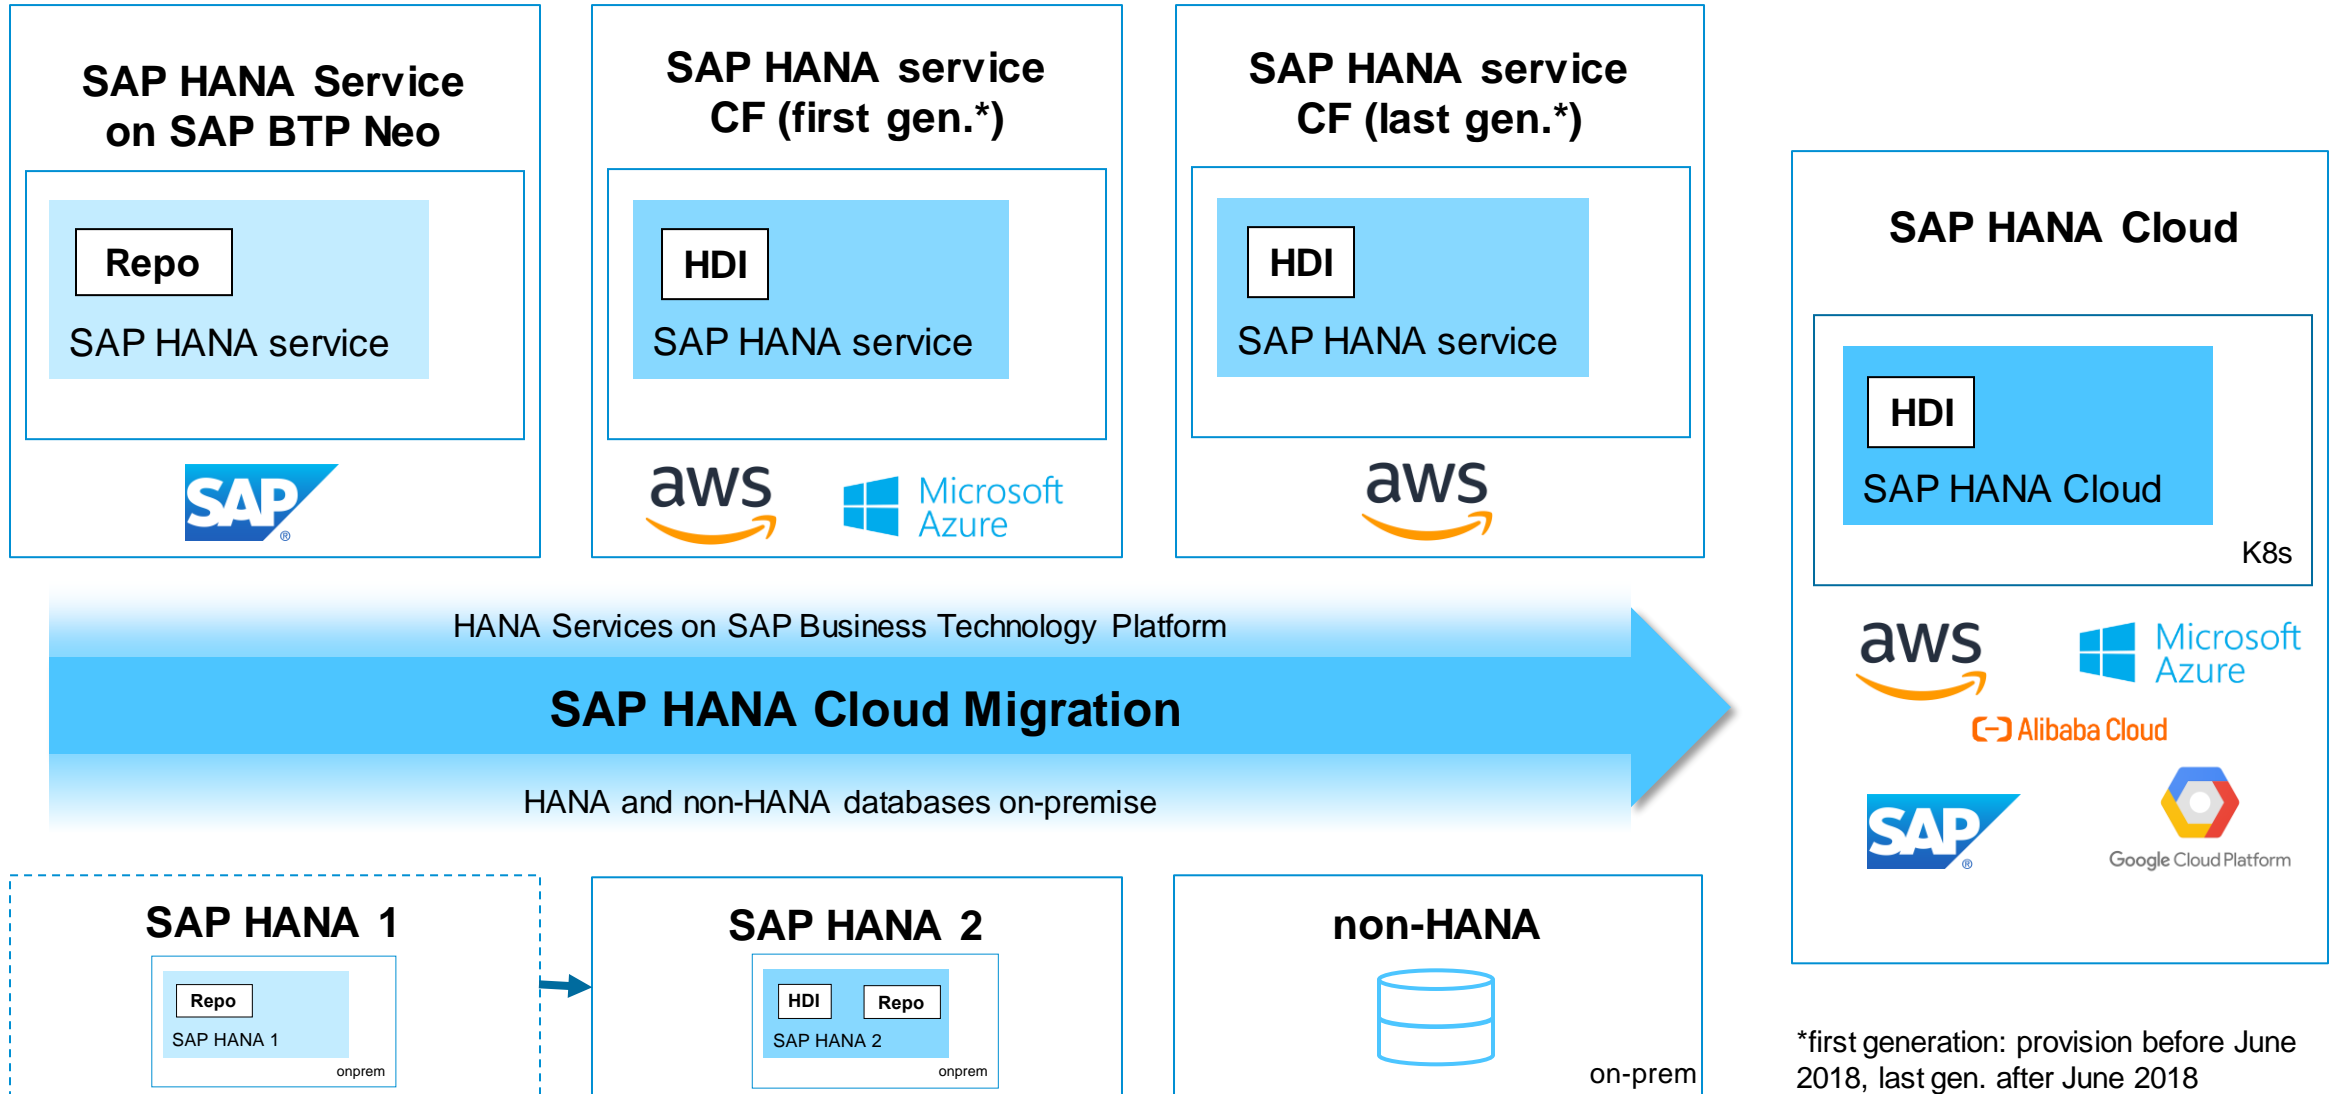

Enablers for SAP HANA Cloud Migration

- Automates key migration tasks to reduce the cost and effort of migration
- Reduces uncertainty and helps to plan/prepare for migration by identifying potential issues upfront
- Self-service tool provided as a service (free of charge) through SAP Business Technology Platform
- No additional storage needed. SAP manages the temporary storage for export and import.

SAP HANA Cloud | Migration scenarios to SAP HANA Cloud

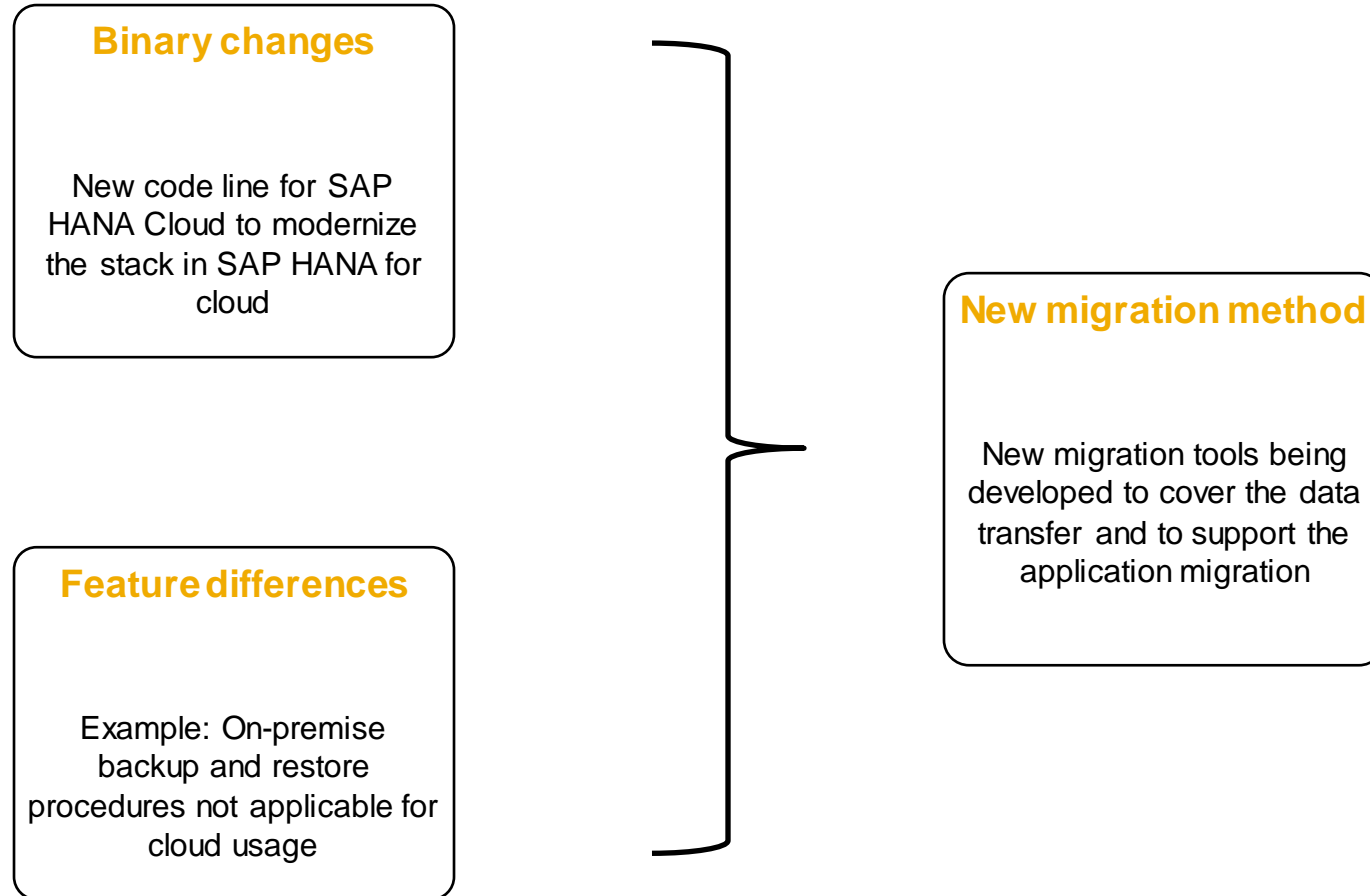

Overview

*first generation: provision before June 2018, last gen. after June 2018

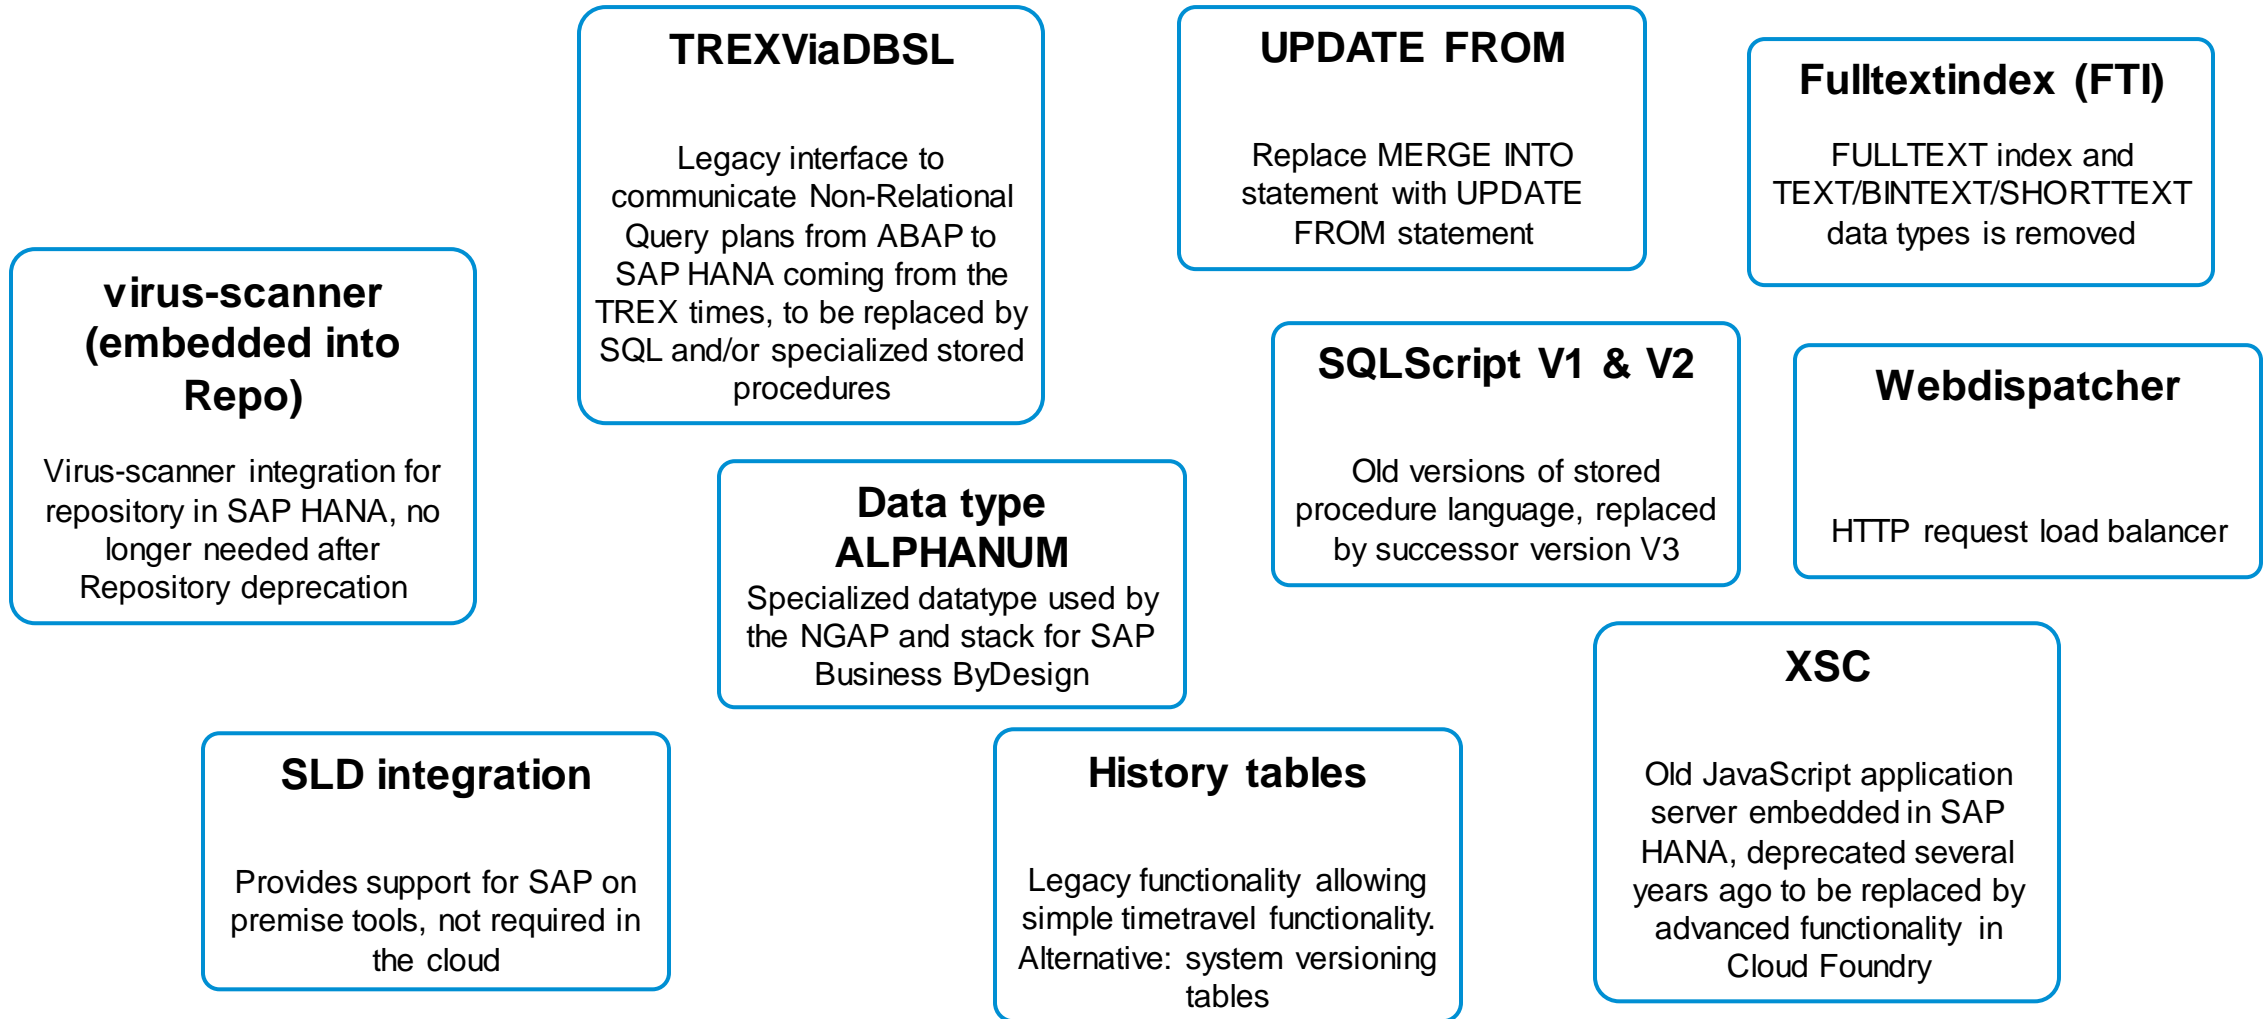

SAP HANA Cloud | Why is a migration tool even necessary?

Reasons

SAP HANA Cloud | Which features are changed, removed, or will be replaced?

Overview

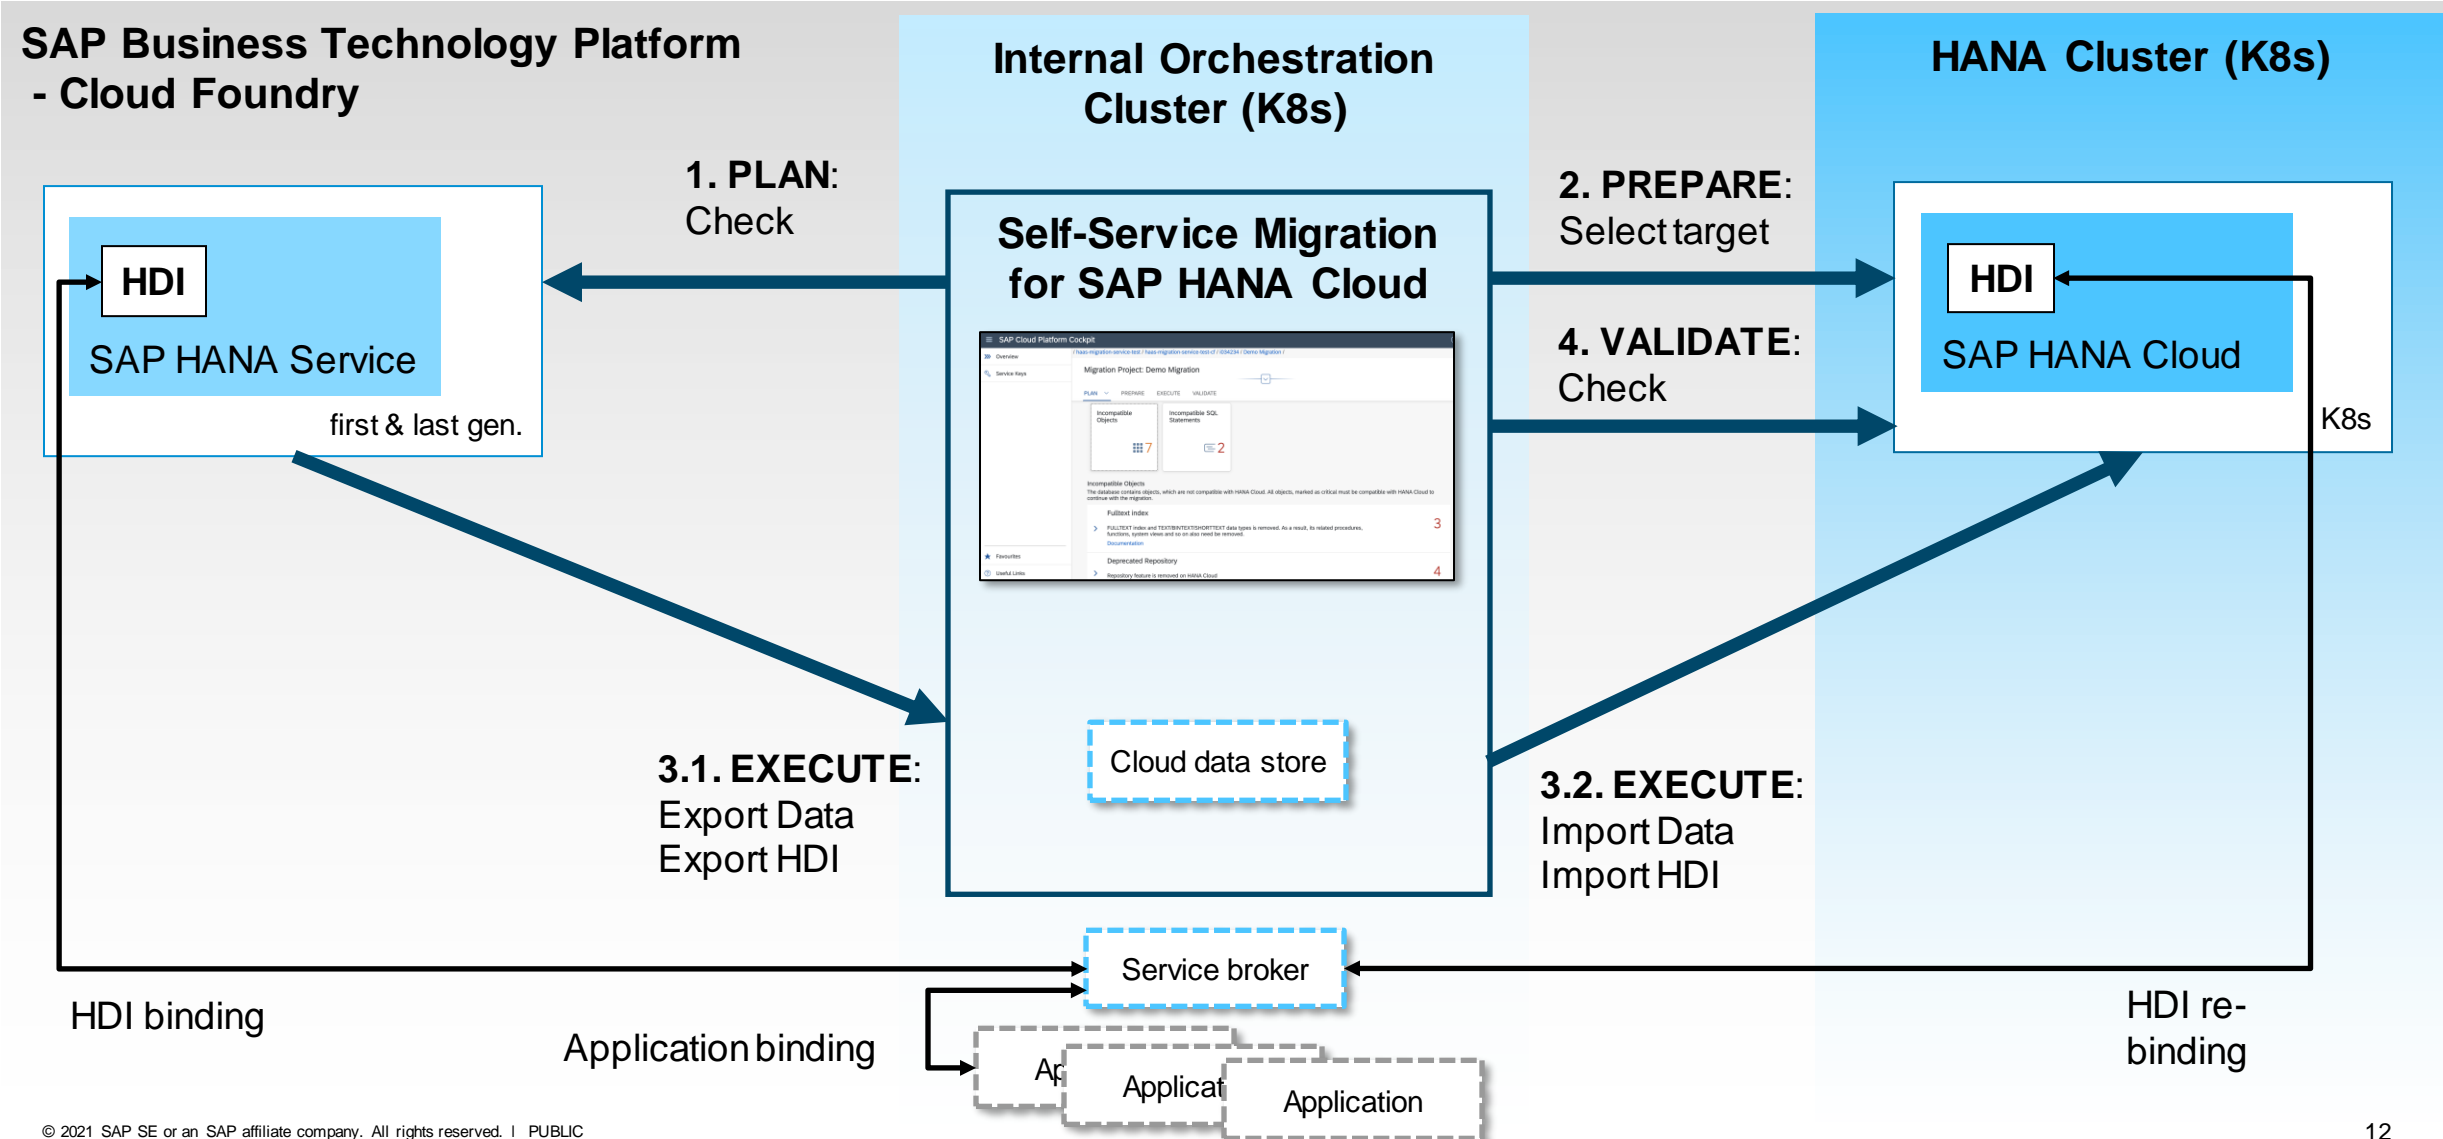

... and more!

Migration **process**

SAP HANA Cloud | SAP HANA Service CF to SAP HANA Cloud

Scenario

SAP HANA Cloud | Severity of compatibility checks

Color Code

RED – Error:

- Breaking changes, unsupported objects won't get migrated, because they can't be created in the target system, e.g. Fulltextindex, History Tables, XSC ...

YELLOW – Warning:

- The schema objects reported may continue to work, but they may need extensive validation testing after migration.
- Issues, where replacements are available, i.e. "UPDATE FROM"

GREEN – Info:

- Informational issues: These objects won't impact the migration but there are changes, which might have no or low impact on the database or application.

Like in every migration project, validation tests after migration are highly recommended.

Migration outlook and customer reference

SAP HANA Cloud | HANA Cloud Migration Self-Service

Planned as of Q4 2021

SAP Business Technology Platform, SAP HANA Service on Cloud Foundry
(provisioned **after** 4th June 2018)

SAP Business Technology Platform, SAP HANA Service on Cloud Foundry
(provisioned **before** 4th June 2018)

Migration from SAP HANA service (on Cloud Foundry) to SAP HANA Cloud

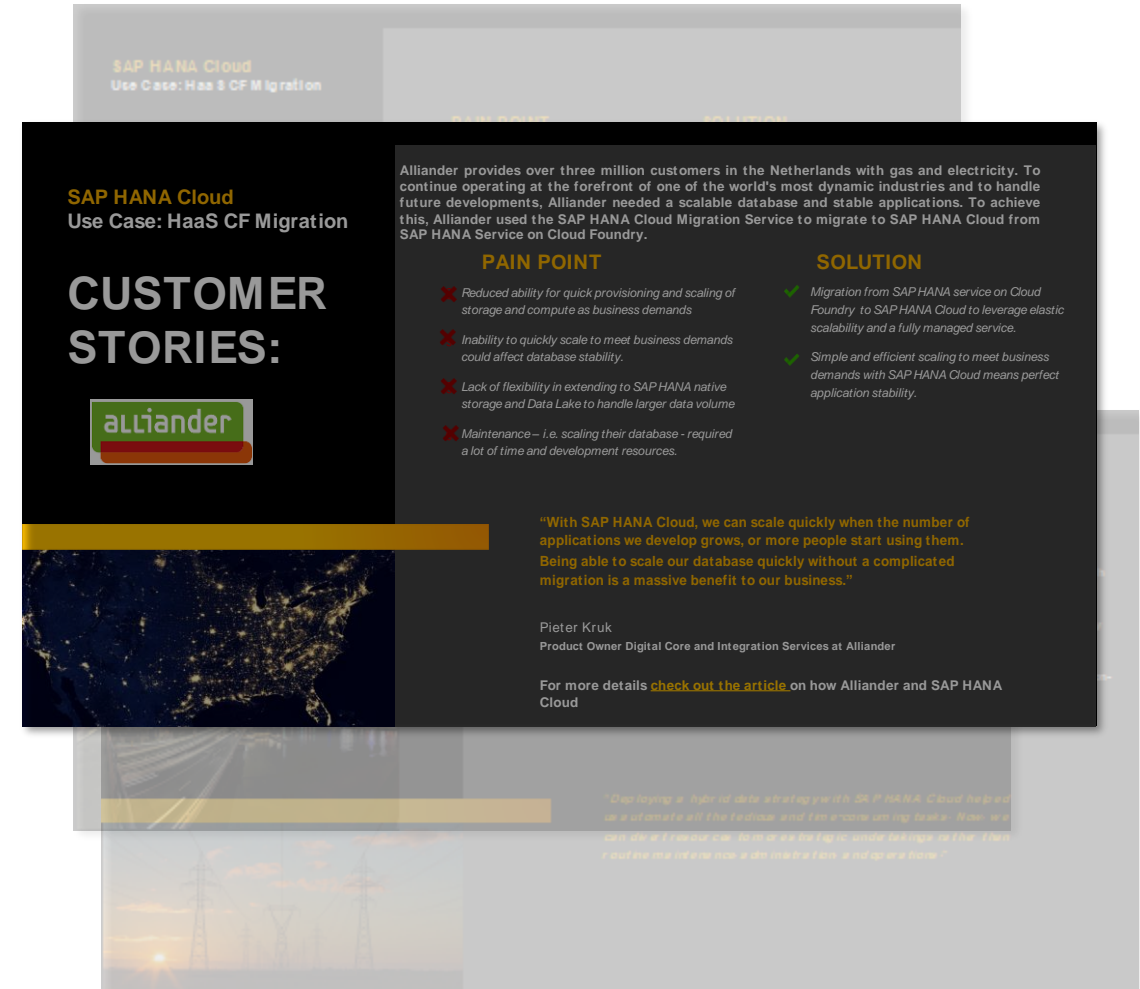

Source: SAP Business Technology Platform, SAP HANA service, on Cloud Foundry

Target: SAP HANA Cloud

Tool: Cloud migration service with partial support of SAP Database Migration Factory tools

Benefits:

- Migration from the SAP HANA service on Cloud Foundry to SAP HANA Cloud to leverage elastic scalability and a fully managed service
- Simple and efficient scaling to meet business demands with SAP HANA Cloud for perfect application stability
- Data lake providing hot and cold data capabilities that keep costs down and offers high performance
- Separated and independent compute and storage, support for scale up or down, consumption-based pricing where charges are calculated based on actual usage of resources and services

Use Case: HaaS CF Migration

SAP HANA Cloud
Use Case: HaaS CF Migration

CUSTOMER STORIES:

alllander

Alliander provides over three million customers in the Netherlands with gas and electricity. To continue operating at the forefront of one of the world's most dynamic industries and to handle future developments, Alliander needed a scalable database and stable applications. To achieve this, Alliander used the SAP HANA Cloud Migration Service to migrate to SAP HANA Cloud from SAP HANA Service on Cloud Foundry.

PAIN POINT	SOLUTION
✗ Reduced ability for quick provisioning and scaling of storage and compute as business demands	✓ Migration from SAP HANA service on Cloud Foundry to SAP HANA Cloud to leverage elastic scalability and a fully managed service.
✗ Inability to quickly scale to meet business demands could affect database stability.	✓ Simple and efficient scaling to meet business demands with SAP HANA Cloud means perfect application stability.
✗ Lack of flexibility in extending to SAP HANA native storage and Data Lake to handle larger data volume	
✗ Maintenance – i.e. scaling their database - required a lot of time and development resources.	

"With SAP HANA Cloud, we can scale quickly when the number of applications we develop grows, or more people start using them. Being able to scale our database quickly without a complicated migration is a massive benefit to our business."

Pieter Kruk
Product Owner Digital Core and Integration Services at Alliander

SAP HANA Cloud | SAP Cloud Solutions migrate to SAP HANA Cloud

- SAP Commerce Cloud
- SAP Sales Cloud, SAP Service Cloud
- SAP Data Warehouse Cloud
- SAP Integrated Business Planning
- SAP Analytics Cloud
- UI5 flexibility
- SAP Cloud ALM
- SAP BTP Workflow Management
- SAP Internet of Things
- SAP BTP API Management, partner-managed edition
- SAP BTP, ABAP environment
- SAP BTP Mobile Services
- SAP Web Analytics
- And many more . . .

Migration **Migration Factory Program**

SAP HANA Cloud | SAP Database Migration Factory Program

Program Overview

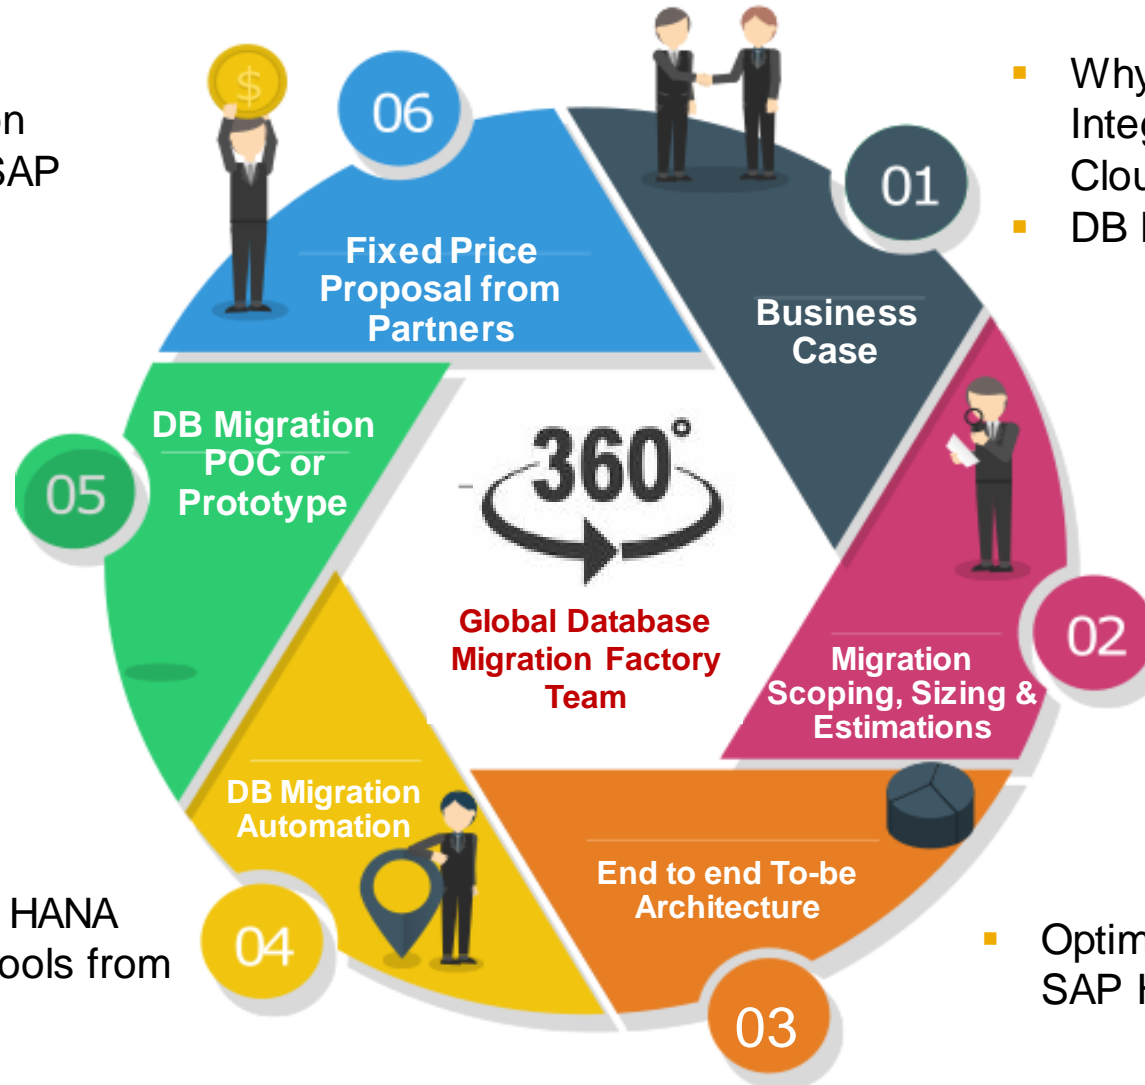

Program Objectives

Simplify adoption of SAP HANA Cloud for customers running SAP HANA Service (CF/Neo) (or) on-premise SAP HANA (or) any non-SAP app's database.

- Predictable end to end migration implementation with SAP Consulting / SAP approved SI Partners

- Demonstrate product capabilities, migration feasibility and superior performance

- Reduce manual efforts with HANA Cloud Database Migration tools from SAP

- Why migrate to next generation Integrated solution on SAP HANA Cloud
- DB Migration TCO/ROI

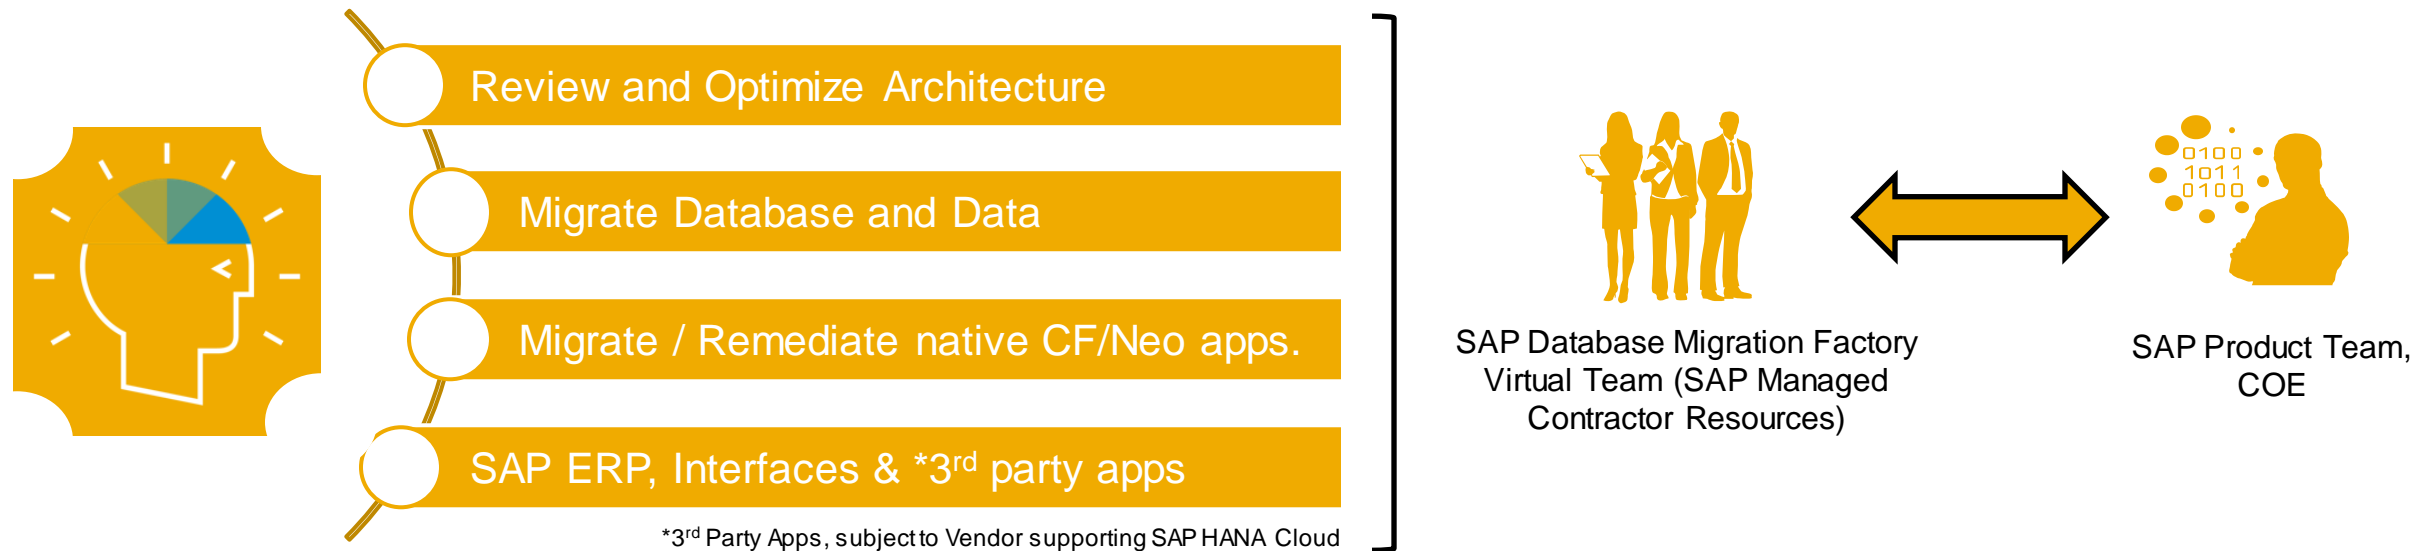

- Database, Application and Infrastructure Assessment
- SAP HANA Cloud Sizing

- Optimize and simplify architecture with SAP HANA Cloud

SAP HANA Cloud | White-Glove HANA Cloud Migration Services

Offering Assessment

White-Glove migration service is a no-cost **service** offering from SAP to **selected customers** to **simplify and accelerate** migration of SAP HANA Service (CF/Neo) and/or SAP HANA on-premise to SAP HANA Cloud.

Migration Success Story

SAP Cloud ALM

What is SAP Cloud ALM

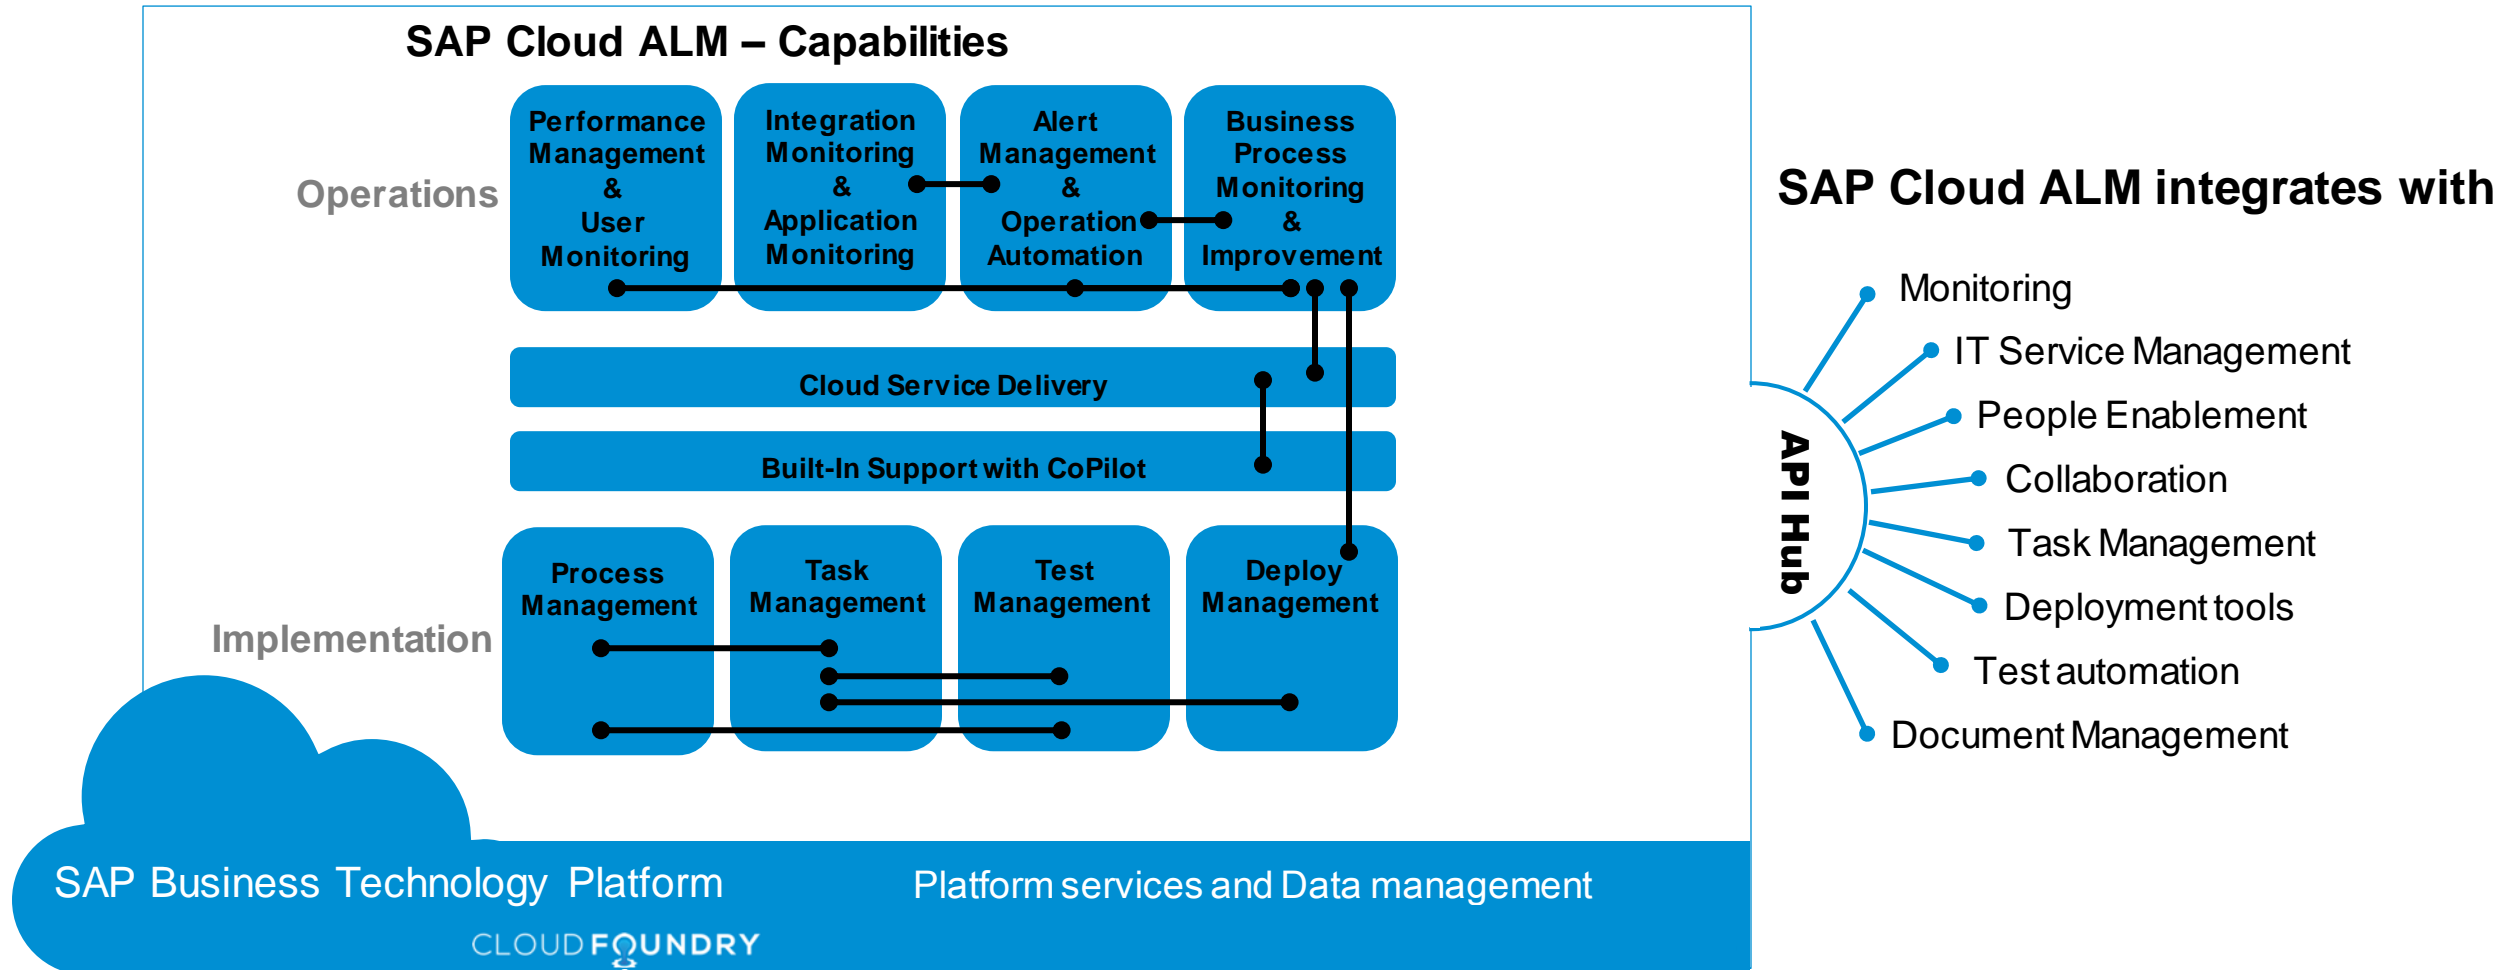

Positioning

Positioning

- SAP Cloud ALM is THE **Application Lifecycle Management solution for the Intelligent Suite**
- Customers with **Enterprise Support** Cloud Edition are entitled to consume SAP Cloud ALM
- **SAP Cloud ALM is free of charge for the customer** as long the application is being used by fair means (8 GB for free, if more memory is consumed, it is charged via CPEA)
 - For Details please see Support Portal pages at <https://support.sap.com/en/alm/sap-cloud-alm.html>
- SAP Cloud ALM is in **General Availability** since August 30, 2020, currently **600 customers**

What is SAP Cloud ALM

Positioning – SAP Cloud ALM is Cloud Native and Open **to Extend and Integrate with Partners**

Migration to HANA Cloud for SAP Cloud ALM

Motivation

Data Center Strategy

- SAP Cloud ALM development started in 2019 and we decided to go for an open stack
- At that time there was no HANA Cloud available but HANA as a Service exclusively
- We decided to offer SAP Cloud ALM to our customers on several hyperscaler (AWS, Azure, Alibaba Cloud, ...)
 - Since on Azure there is no SAP HANA Service, and we don't run SAP Cloud ALM on different hyperscaler with different database codelines, migration on AWS from HaaS to HANA Cloud was required

Further reasons to move to HANA Cloud

- HANA Cloud will offer better horizontal scaling options
- Future enhancements like Tenant Move, HANA Serverless, ...
- HANA Cloud is expected to have lower TCO than SAP HANA Service

Migration to HANA Cloud for SAP Cloud ALM

Technical Migration

Technical Setup of SAP Cloud ALM in EU10

- SAP Cloud ALM consists of 50 micro services
- Data separation of customer data is implemented with schema separation
- For resilience reasons, SAP Cloud ALM runs one HDI container per customer per micro service, distributed on 8 HANA instances (depending on the load and the expected data size);

Migration service-instances

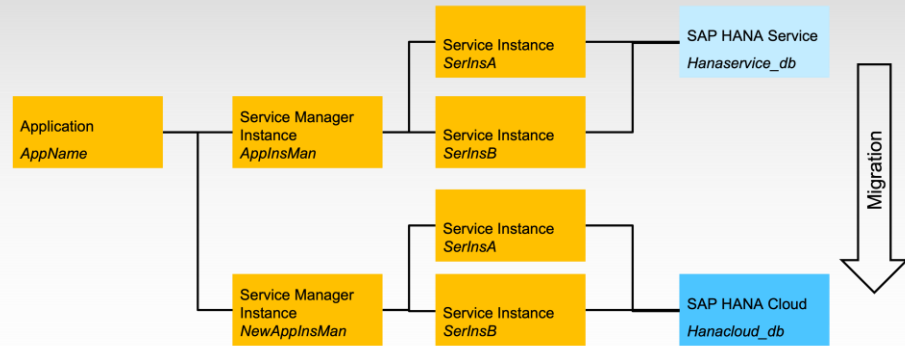

Service Instance Migration | Options

Business Technology Platform - Cloud Foundry Space

Before migration

Business Technology Platform - Cloud Foundry Space

Source environment is not modified, to rebind the App to the new Instance of the Instance Manager the MTA-File must be modified. The source system remains and can be rebinded again in case of failure in the target system.

Creating a new service-manager instance

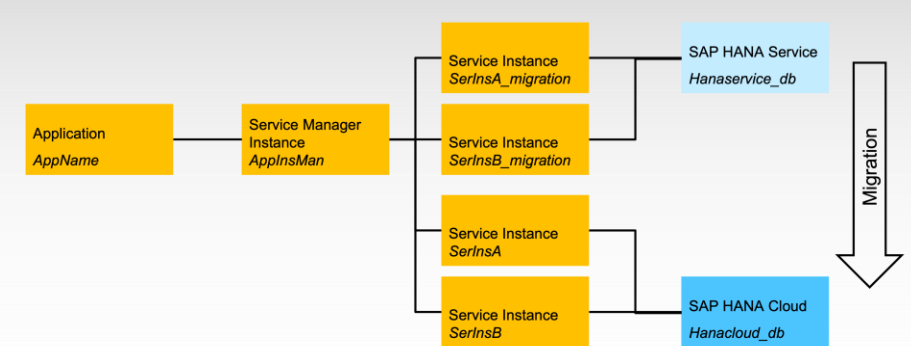

Business Technology Platform - Cloud Foundry Space

Non-managed-schema, SAP HANA Schemas and HDI Containers, Plan "Schema"

Nonmanaged schema plan migration

Business Technology Platform - Cloud Foundry Space

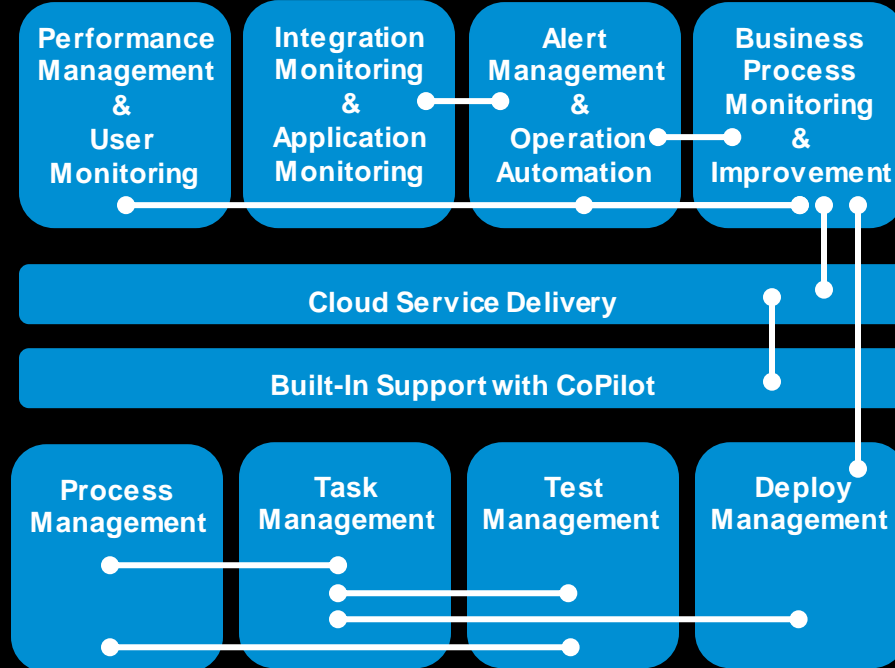

No MTA modification or rebinding is required. Application will point to the new database after the migration. Old service instances can be deleted, if they are obsolete.

Using the existing service-manager instance
