SAP Leonardo Live Digital Operations

Presented by
Manav Misra – Chief Science Officer

CenturyLink – Meeting Tomorrow's Challenges Today

By 2020,

THE NUMBER OF POTENTIALLY CONNECTED THINGS WILL BE 1.8 TRILLION...

240 connected devices for every person on the planet

...AND THE VOLUME OF DATA WILL BE 44 ZETTABYTES

If an 11 oz cup of coffee represented 1 gigabyte...

...this would have the volume of 44 Great Walls of China

 **CenturyLink[®] Business** is meeting tomorrow's challenges today with industry leading end-to-end solutions

SAP Leonardo – CenturyLink Value Proposition

IoT

- End-to-End IoT Solutions from Infrastructure to Analytics

Big Data

- Big Data as a Service
- Big Data Analytics Solutions

Data Network

- World class data transport & DCs

Analytics

- Taking customers from Data to Decisions

Machine Learning

- World class ML and AI Capabilities

Cloud Platform

- Managed SAP
- Hana Enterprise Cloud
- Managed Big Data

Design Thinking

- Design to Value Roadmap
- Multi IoT Roadmap
- Leonardo Kick Start

Blockchain

- Building core Blockchain capabilities

CenturyLink Leonardo Related Solutions

- Big Data & Advanced Analytics
- Multi-IoT Practice
- Multi-Cloud Enablement, CAM
- Machine Learning/AI
- BI Competency Center
- Road mapping and Design thinking services

Digital Operations – Data Center Analytics

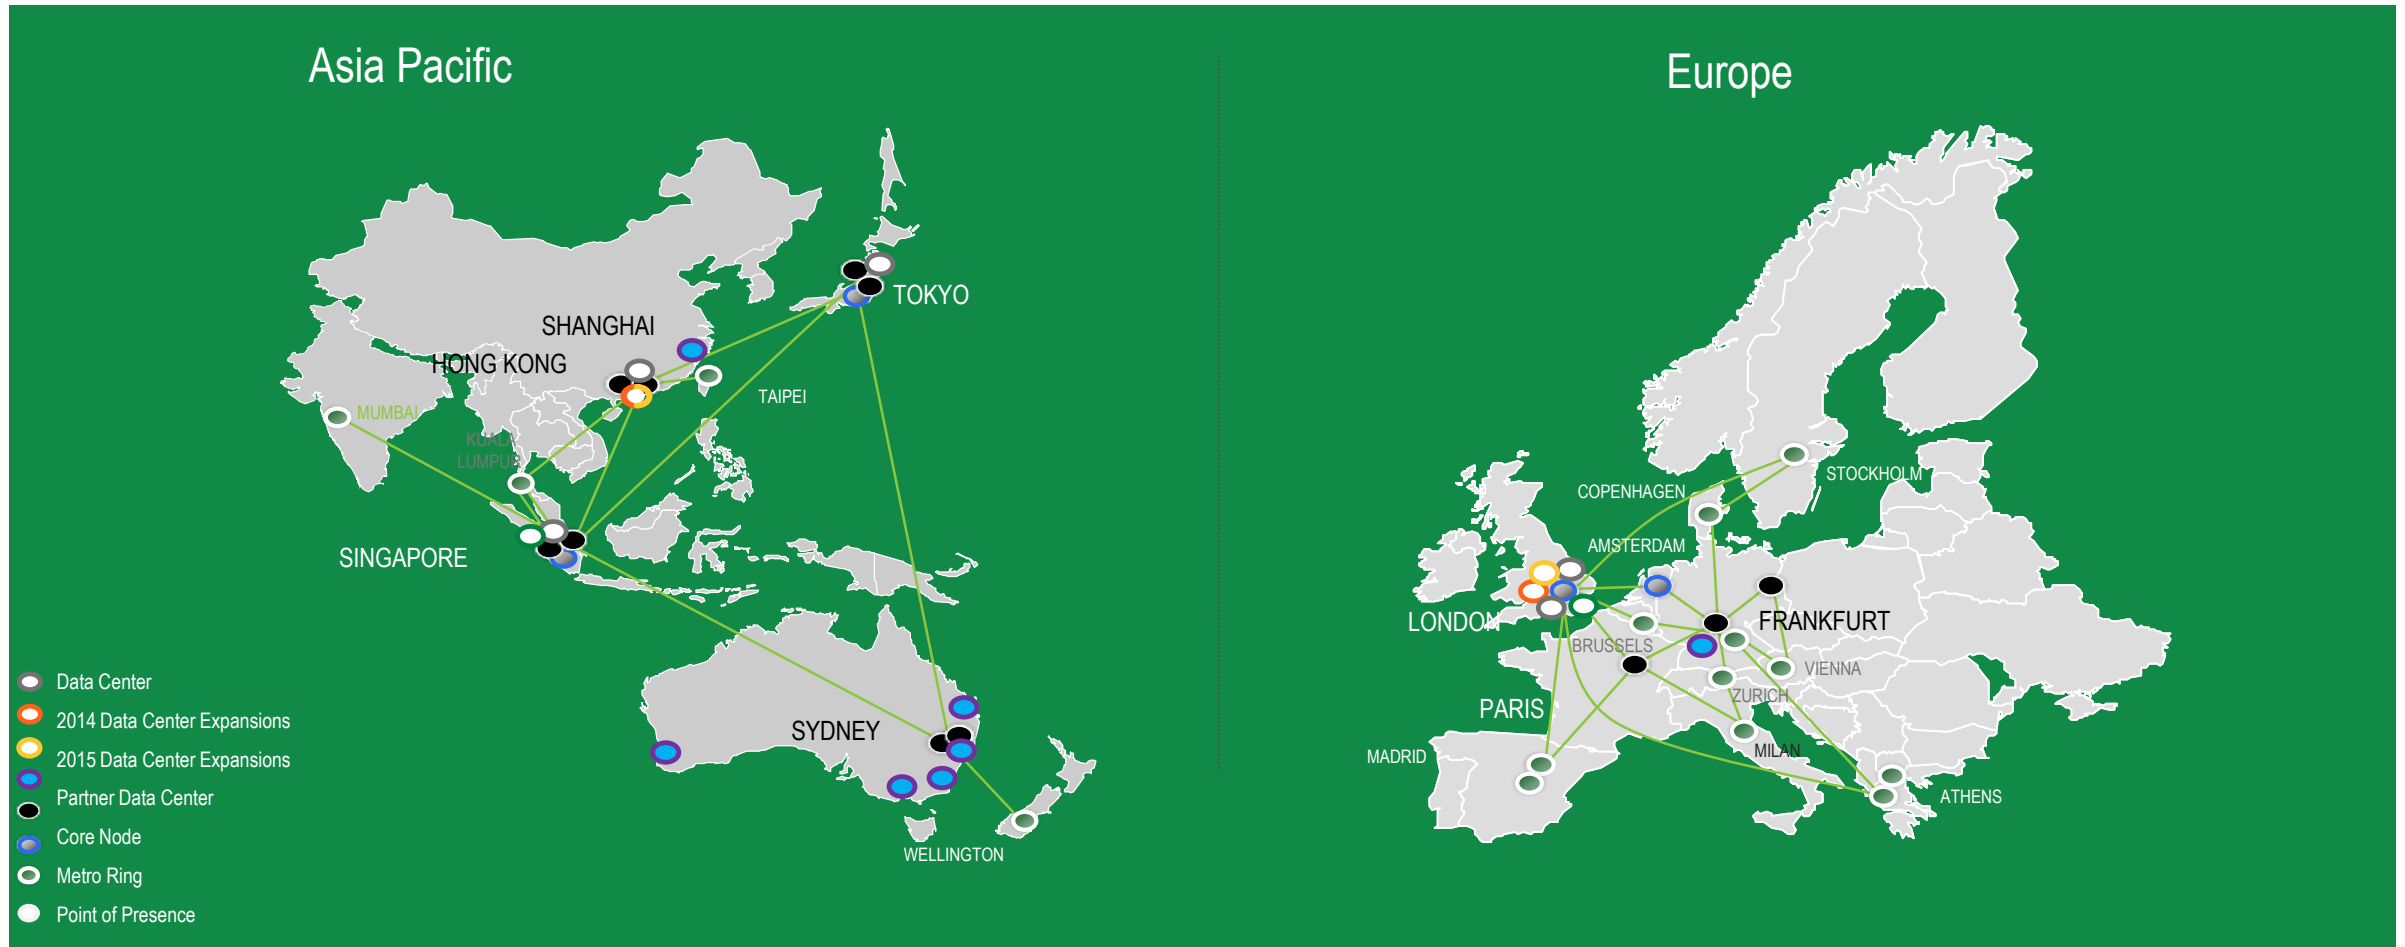

Data Center & Network Footprint

North America

Data Center & Network Footprint

CenturyLink is a global leader in networking, colocation, cloud infrastructure and hosted IT solutions for enterprises

Data Center Analytics – Goals & Challenges

Business Goals

- Improve customer experience
- Maintain profitability (adhering to SLAs)
- Increase employee productivity of domain experts
- Capex planning
- Process improvement
- Prevent incidents through early detection
- Reduce MTTR by facilitating root-cause analytics
- Facilitate domain experts and harvest their knowledge

Functional Goals

- Reduce mean time to recovery
- Facilitate root cause analysis
- Prevent incidents through predicting them
- Detect incidents before they become impactful

Technical Goals

- Predictions on all unique streams
- Real-time
- Scalability
- Robust
- Resiliency
- Extensibility
- User interaction

Solutioning Challenges

60+ Data Centers Worldwide, 17 that are cloud enabled

- Monitor Network, Storage and Compute media
- Wiretap Cloud Application and Service Messages (not customer's apps)
- Install thousands of "Canary" (Customer Proxies)

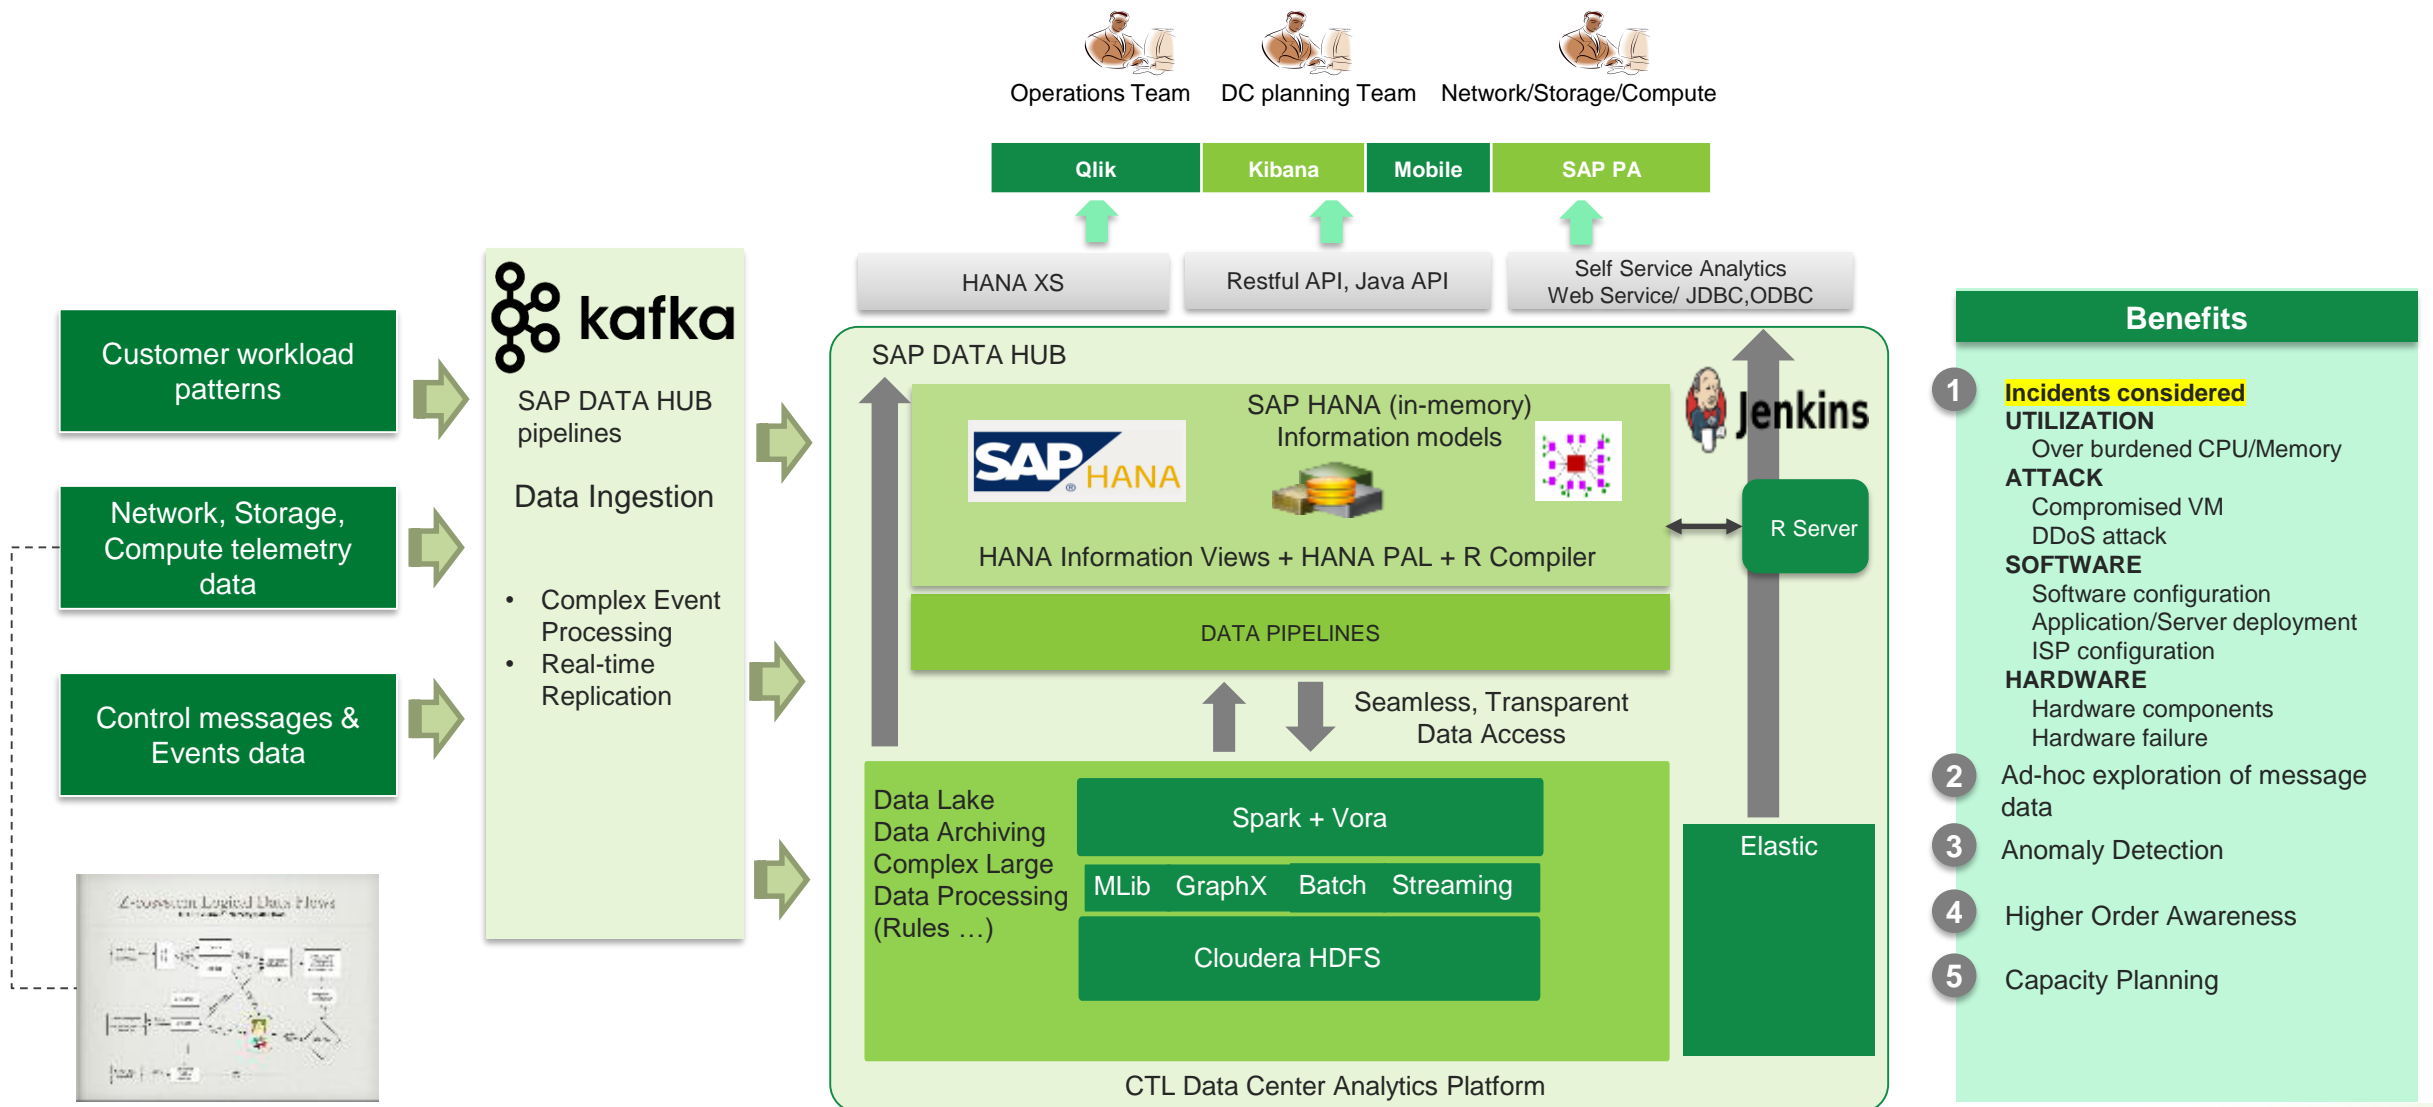

Process 1 Billion + messages per day

- Fixed 150 Terabytes of storage by retention policy
- Bursting at 50K+ messages per second
- Real Time and Batch Processing

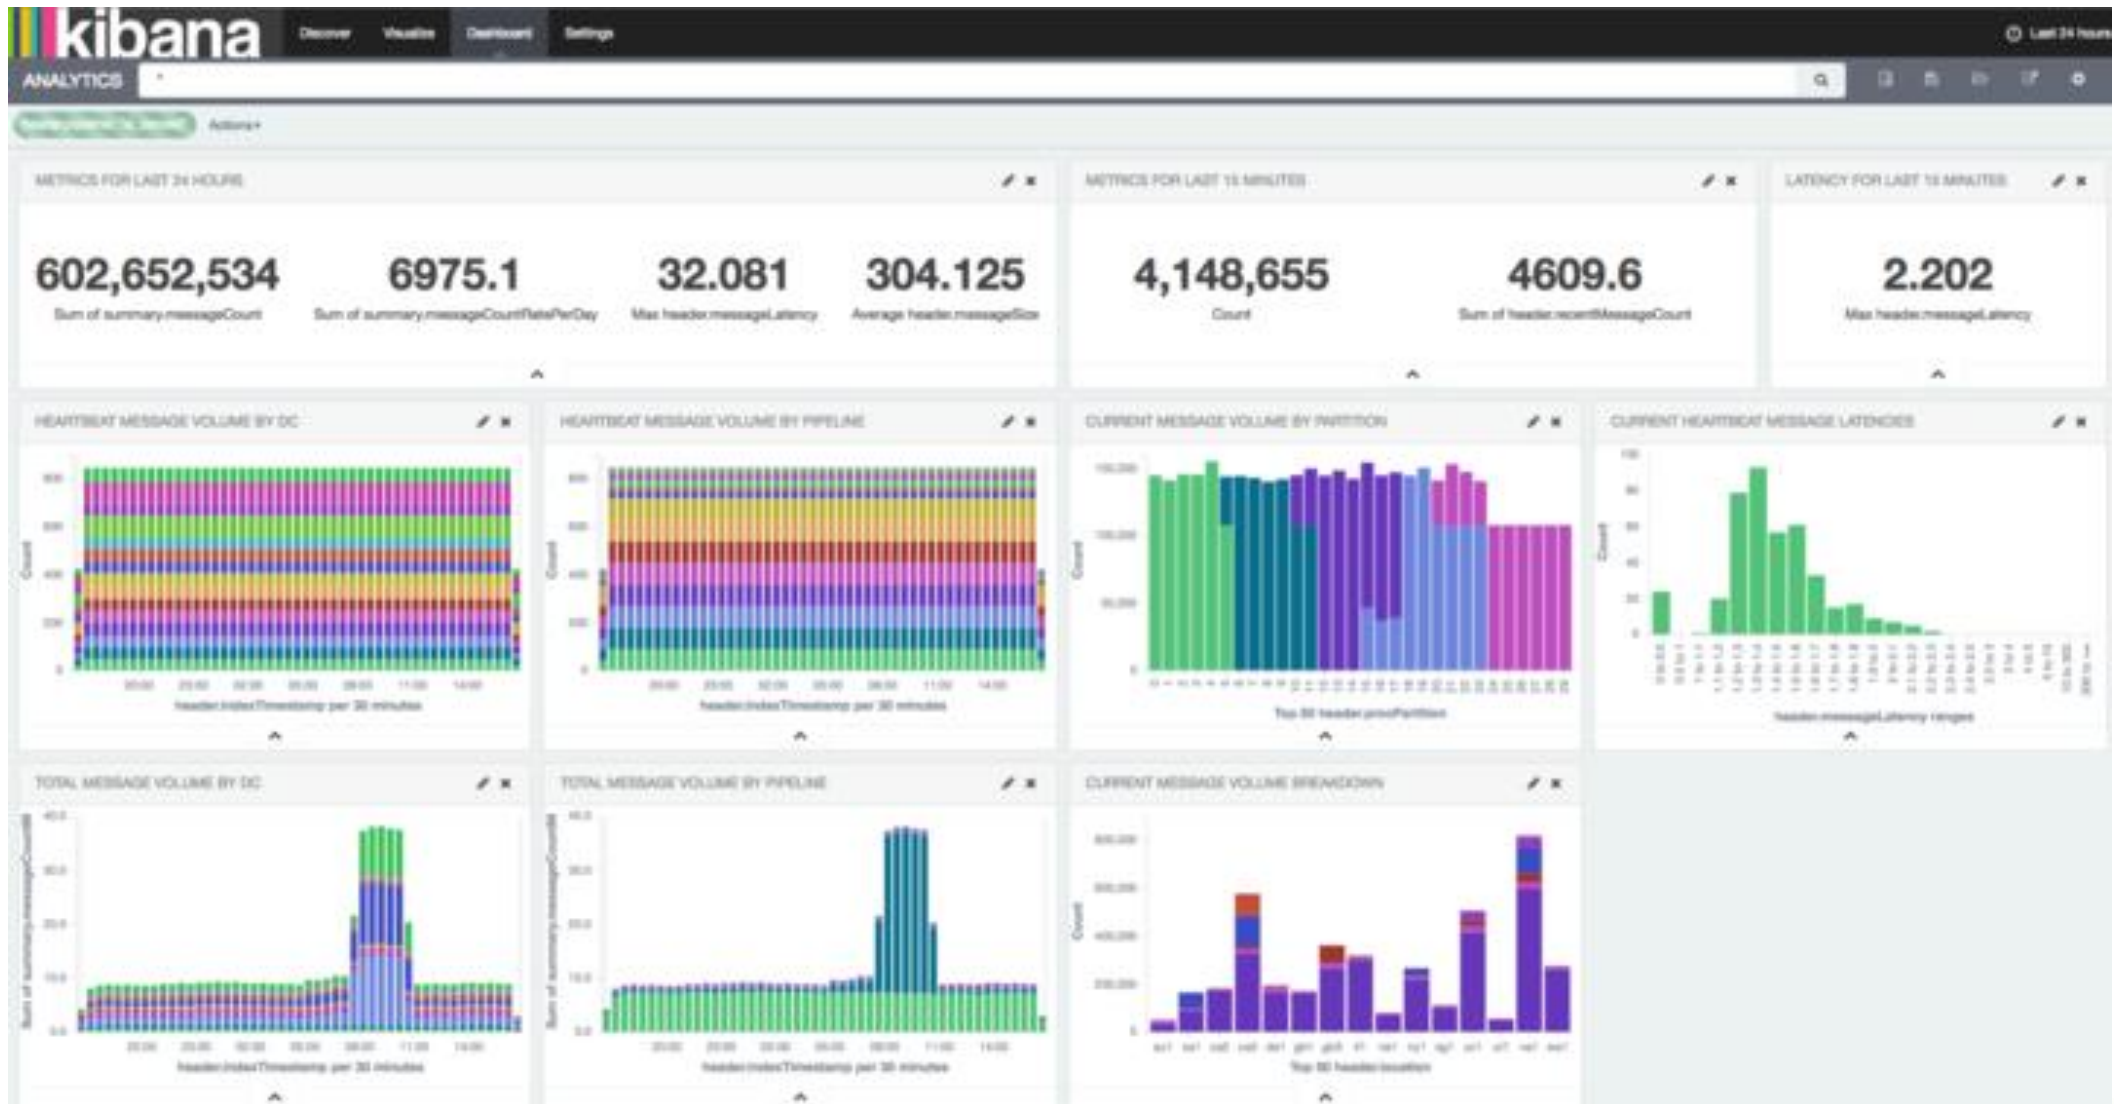

Solution Life Cycle

- COLLECT
 - Application exhaust
 - Zenoss telemetry
 - Canary data
- REPORT
 - Stability reporting
 - Capacity planning
 - Self service data
- ANALYZE
 - Incident Detection
 - Incident Prediction
 - Self-service detection

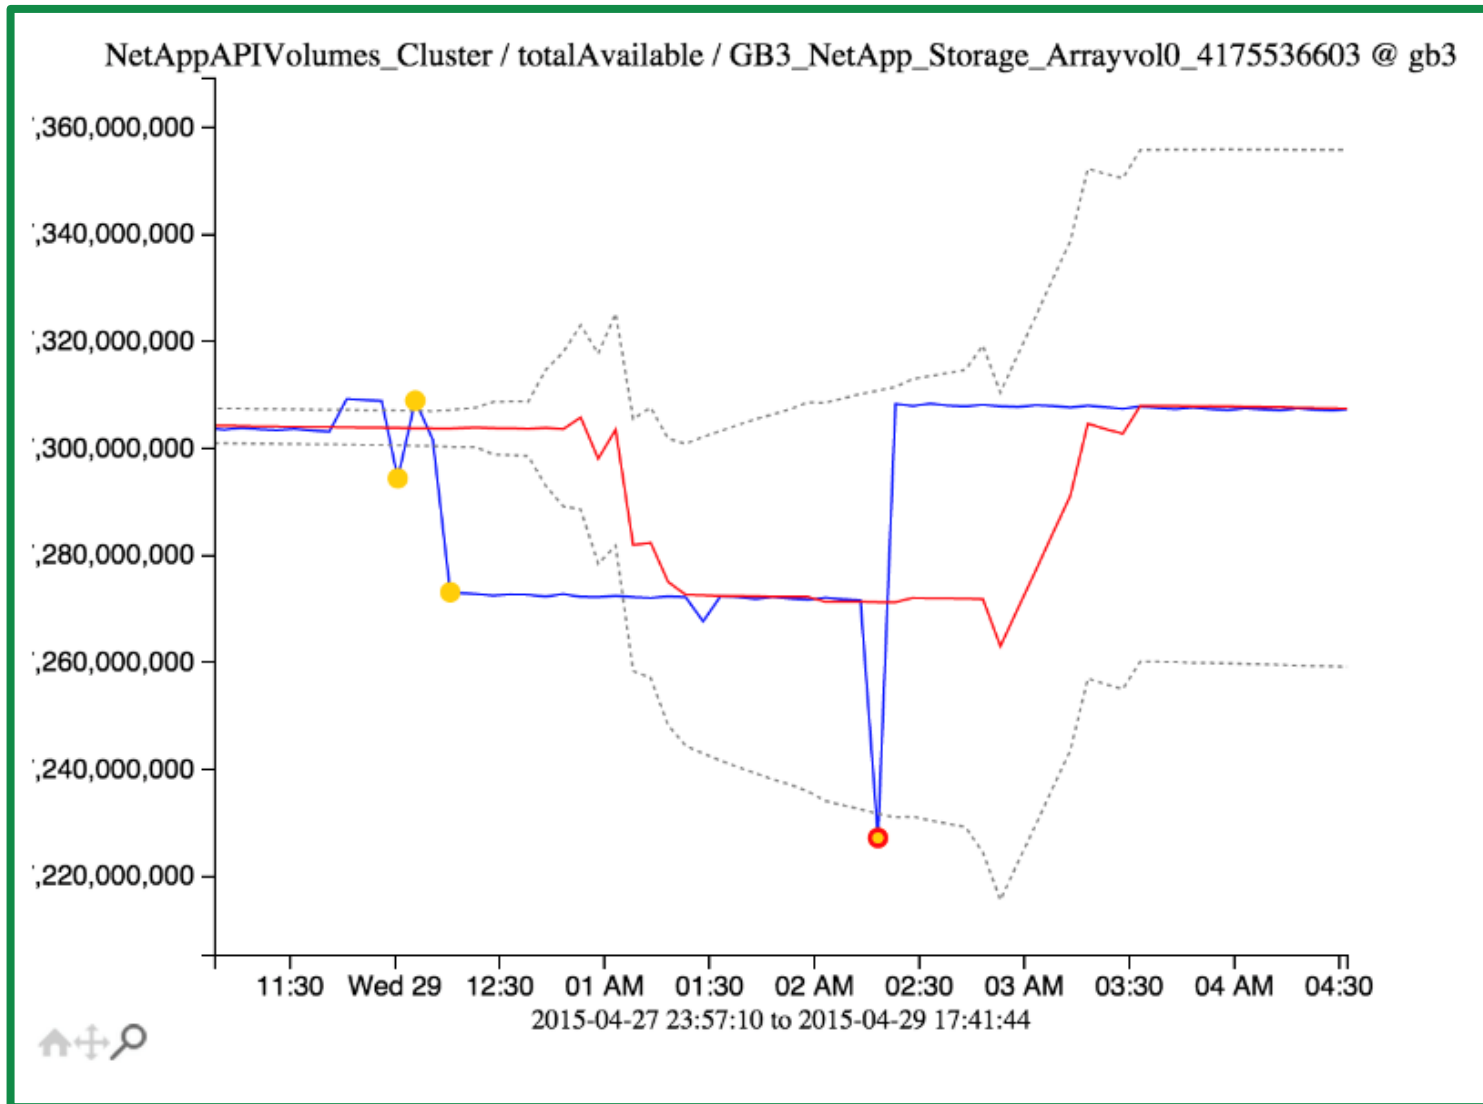

SAP Leonardo –Digital Operations

Data Center Analytics – Outcomes

Data Center Analytics –Anomaly Detection

GOAL

Minimize time until resolution (TTR) through real-time detection

DEPENDENCIES

Capture the time series data for each piece of connected platform technology

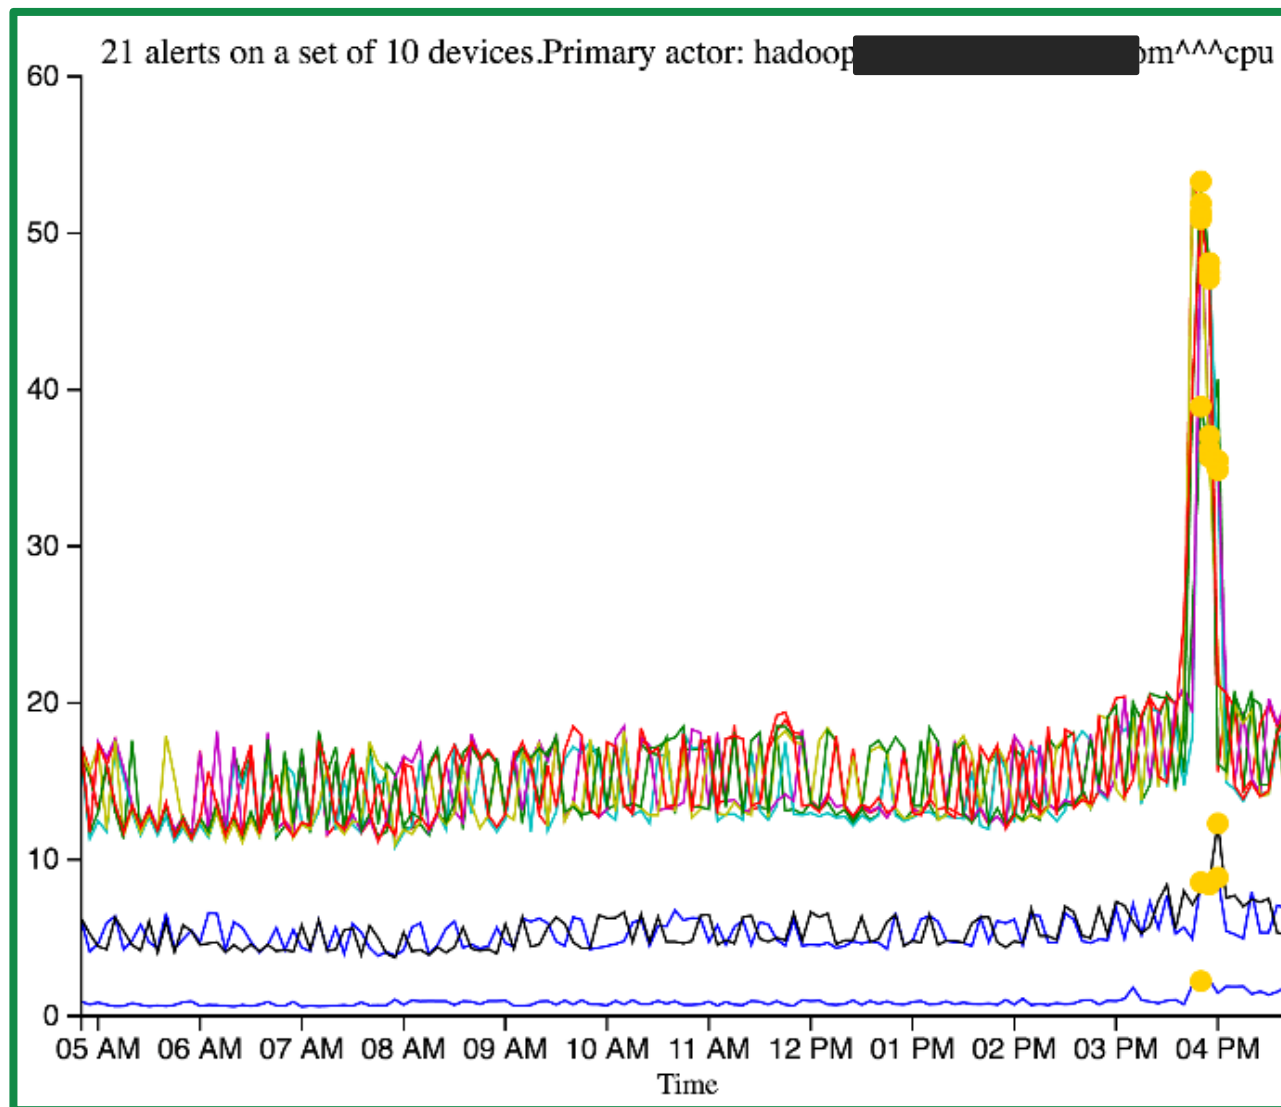

APPROACH

Find explicit and implicit anomalies within a time series vector

TECHNOLOGY

Prediction and clustering

Data Center Analytics – Higher Order Awareness

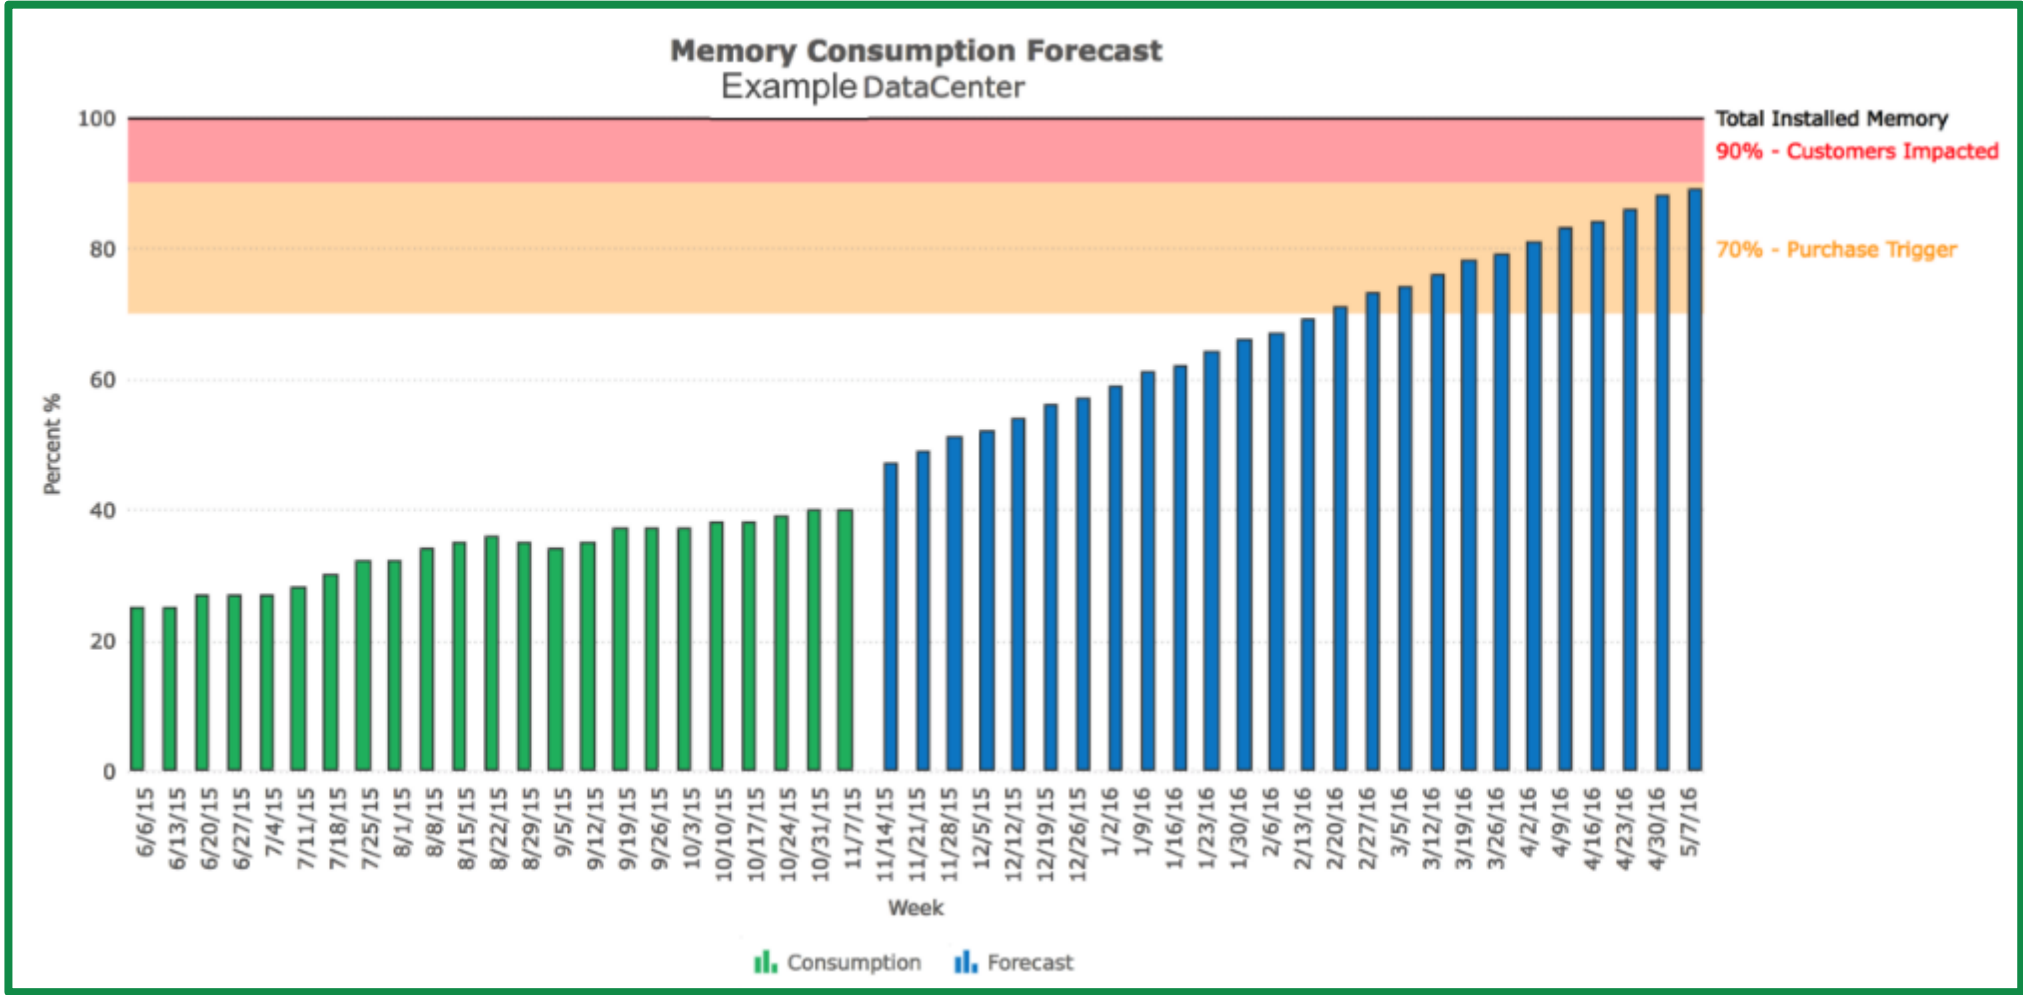

Group anomalous patterns together based upon time and shape

Create higher-order alerts

Capacity Planning

Forecast time at which we will cross critical thresholds
180 day horizon

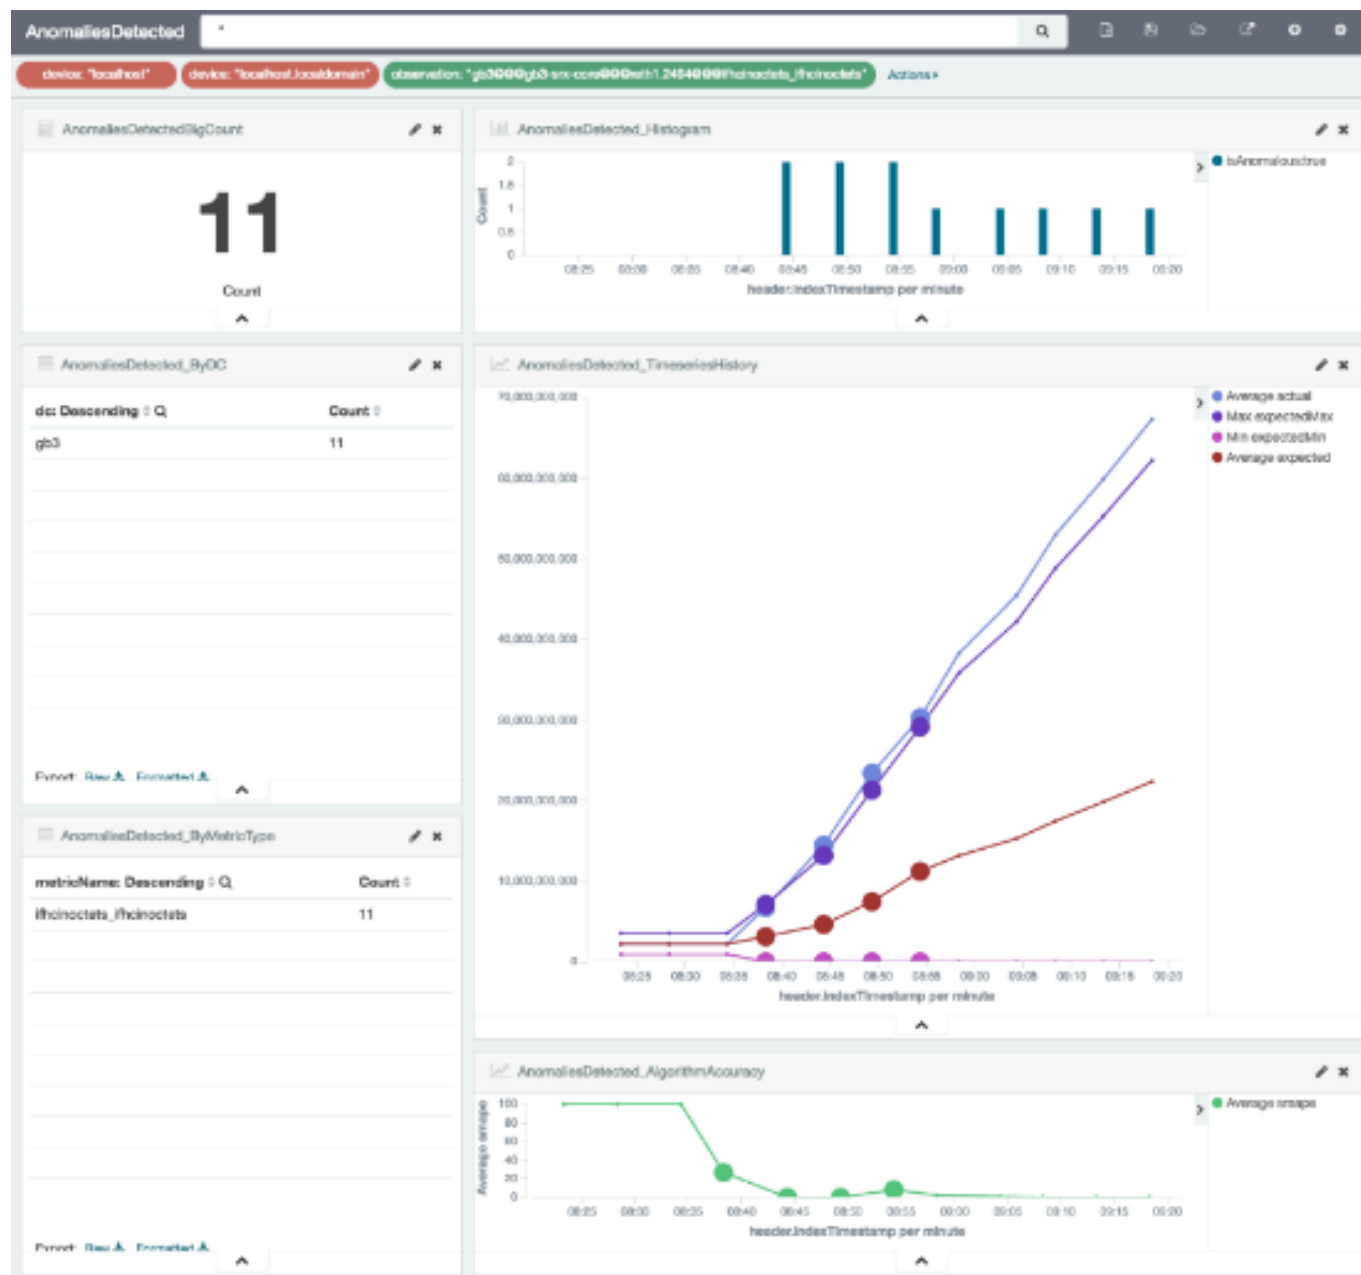

Detecting Patterns to Predict Issues

Alignment of anomalies across devices through time

Alignment varies based upon type of incident

Anomaly Detection Dashboard

Key Takeaways

Processing message volume > 1,000,000,000/day

Analytics uptime > 99.9%

Stability of Cloud platform > 99%

~60MM+ predictions in 24hr.

Anomaly rate < 0.01% (0.0001)
~3K anomalies/day

Accuracy is ~90%

Prediction latency ~3.0 seconds

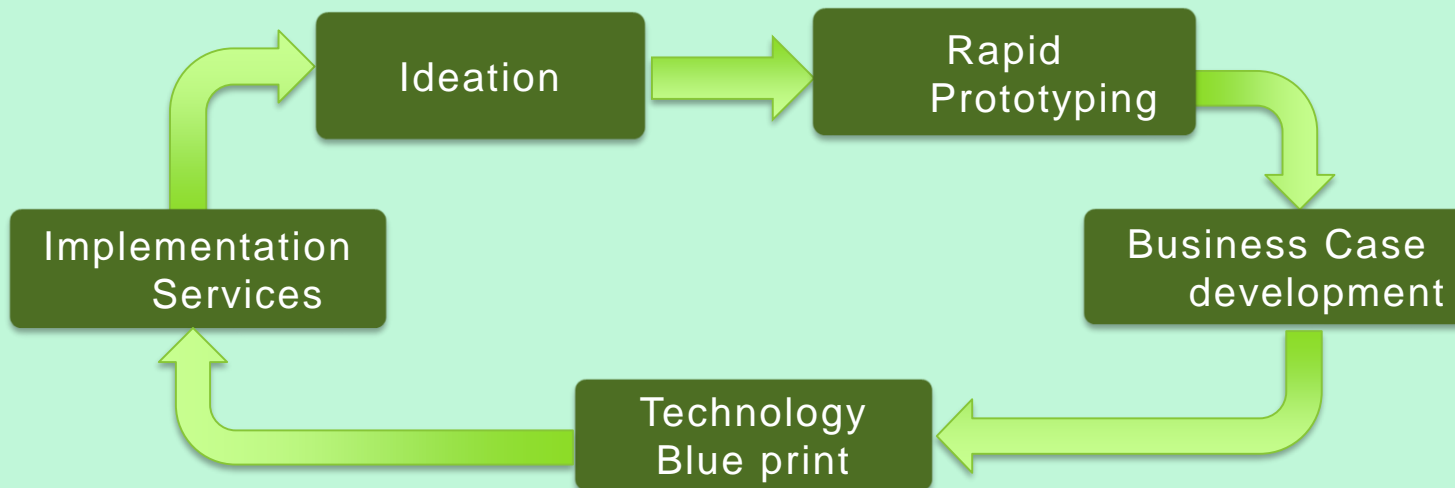

~30 Higher order alerts/day

CenturyLink Approach

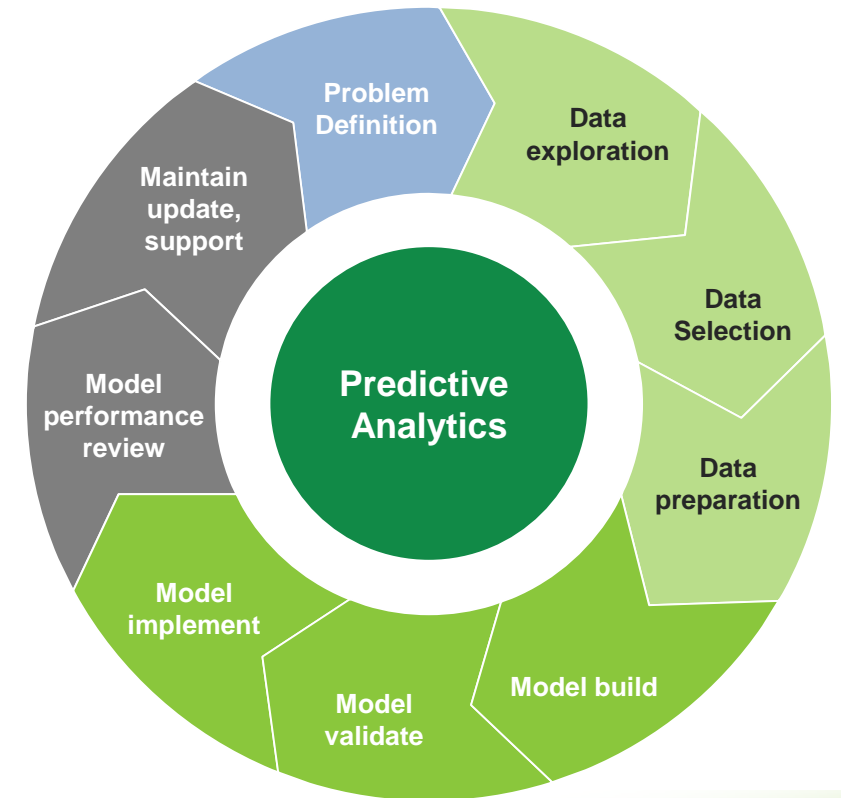

CenturyLink Leonardo Offerings – Design Thinking – 4 to 6 weeks

SAP Datahub and Advance Analytics Quick Start Program

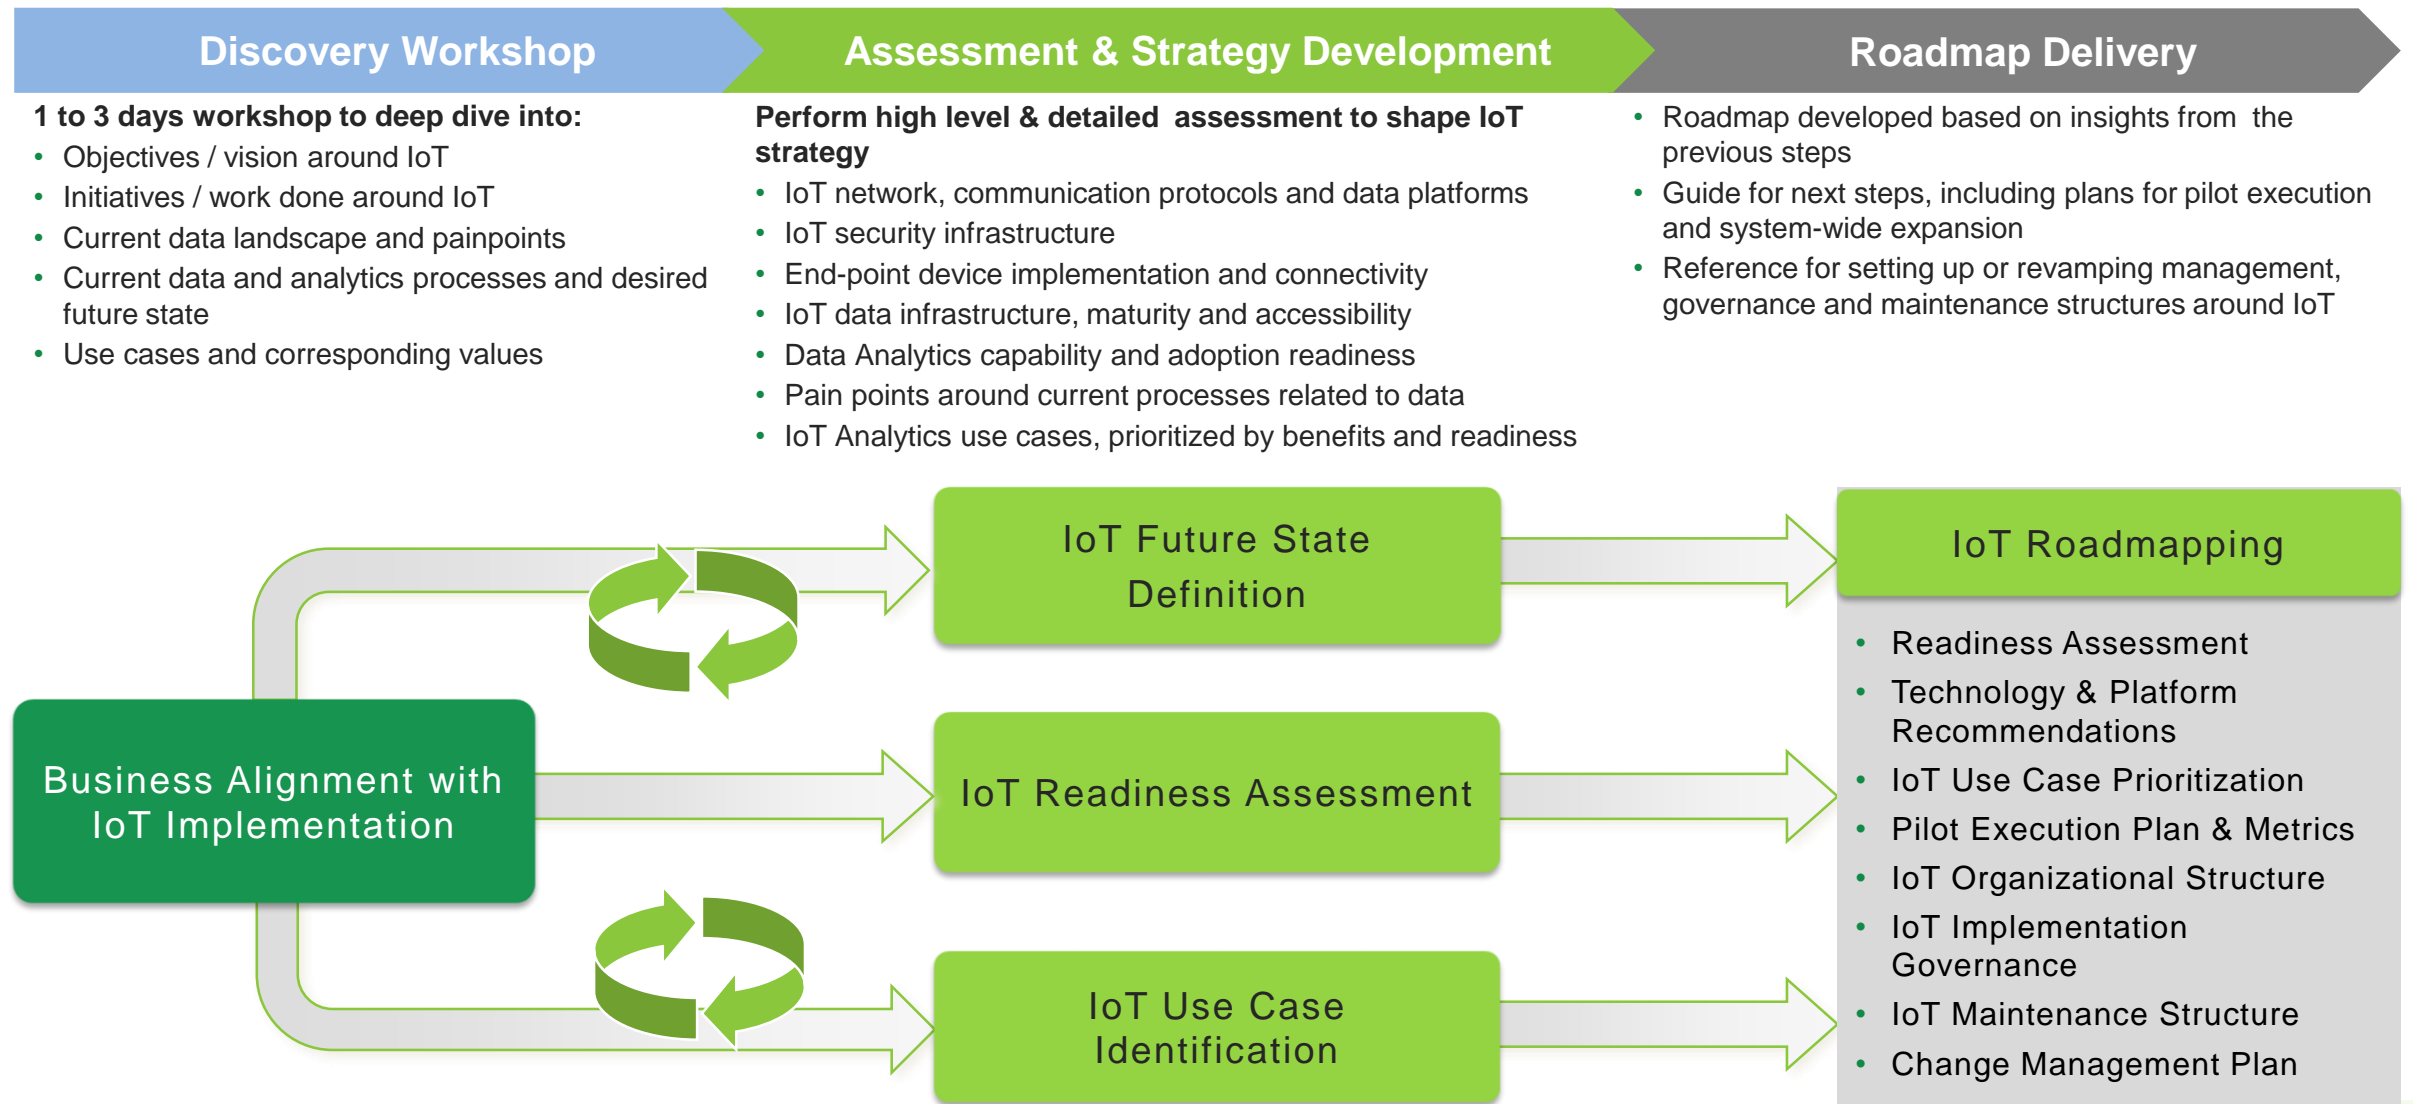

SAP Leonardo Design Thinking services

CAPstone (CenturyLink Analytical Process) Methodology

Multi-IoT Strategy Roadmapping

Leonardo Related Use Cases by Industry

RETAIL & CPG

- signal detection
- consumer sentiment / paths to purchase
- marketing analytics
- customer lifecycle management
- Loyalty / attrition
- promotions

BANKING

- credit risk / fraud
- prospect acquisition
- share of wallet analysis & strategy
- Customer churn / paths
- Sentiment analysis

INSURANCE

- claims & sales fraud
- agent lifetime value analysis
- broker & adjustor effectiveness models

HEALTHCARE

- predicting readmissions
- sepsis prediction models
- healthscore calculation
- prediction of outcomes / quality of care for chronic diseases
- Paths to surgery

MANUFACTURING

- Predictive asset maintenance
- demand forecasting
- spare parts inventory planning
- pricing & margin
- warranty valuation
- supply chain optimization

TELCO

- cyber security threat detection
- equipment failure prevention
- next product to buy (NPTB)
- real time offers
- customer satisfaction / churn

CROSS INDUSTRY

- cybersecurity
- employee turnover/retention analysis; HR analytics
- customer churn analysis

OIL & GAS

- predictive asset maintenance
- intelligent exploration
- c-store sales optimization
- improved process safety/incident reduction

AUTOMOTIVE

- predictive asset maintenance
- auto sensors
- reporting location
- fleet management
