Focus of session on SAP Cloud Transport Management integration with ALM

SAP Business Technology Platform

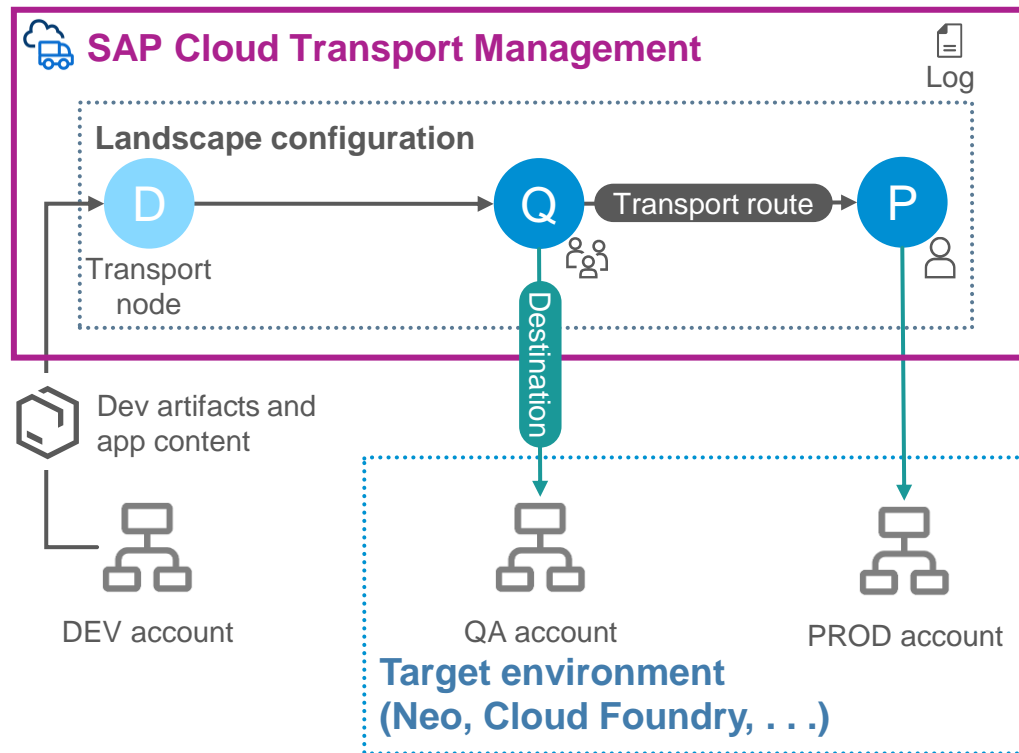

Deliver your cloud changes toward production

SAP Cloud Transport Management service

Transport mgmt

Cloud-based transport management solution to handle the propagation of your changes in the cloud

SAP BTP

- Allows to apply standardized, enterprise-ready change management process – no ABAP system required
- Add transparency on **audit trail of changes**
- Establish **separation of concerns** + regain control
- Option for **synchronizing transports** with on-premise artifacts

Transport in SAP BTP ABAP, Cloud Foundry & Neo envs. of:

- Dev artifacts** (MTA archives – like CTS+)
- In addition: **application content**    SAP Cloud solutions ...
- Further content types planned

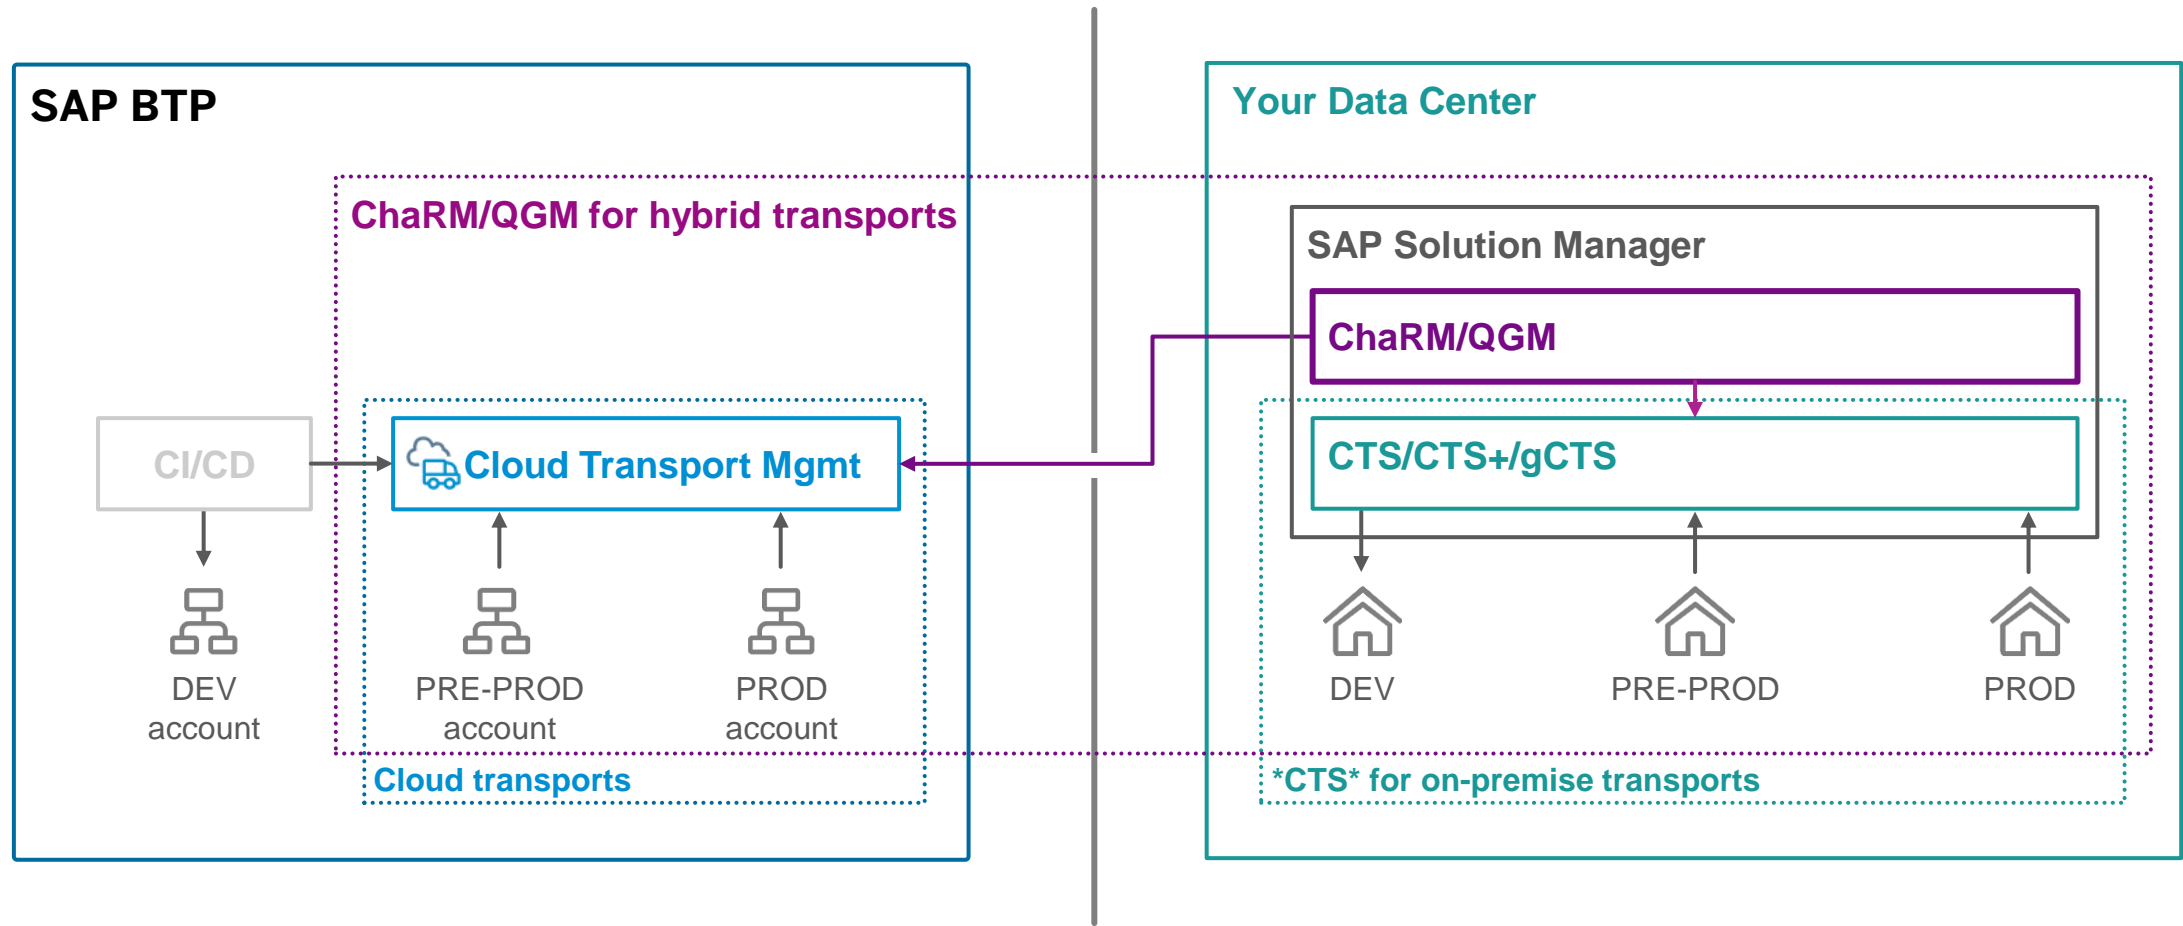

Manifold integration options:

- With CI/CD
- Basis for cloud integration into Change Management by SAP Solution Manager and SAP Cloud ALM
- Open APIs

Available via [SAP BTP free tier model](#), [PAYG](#), [CPEA](#)

Integrate cTMS and CTS+ with Change Management on SAP Solution Manager

Integrate cTMS with Change Management on SAP Solution Manager

SAP Cloud Transport Management (cTMS) can be integrated with the Change Management tools on SAP Solution Manager: **Change Request Management** (ChaRM) or **Quality Gate Management** (QGM).

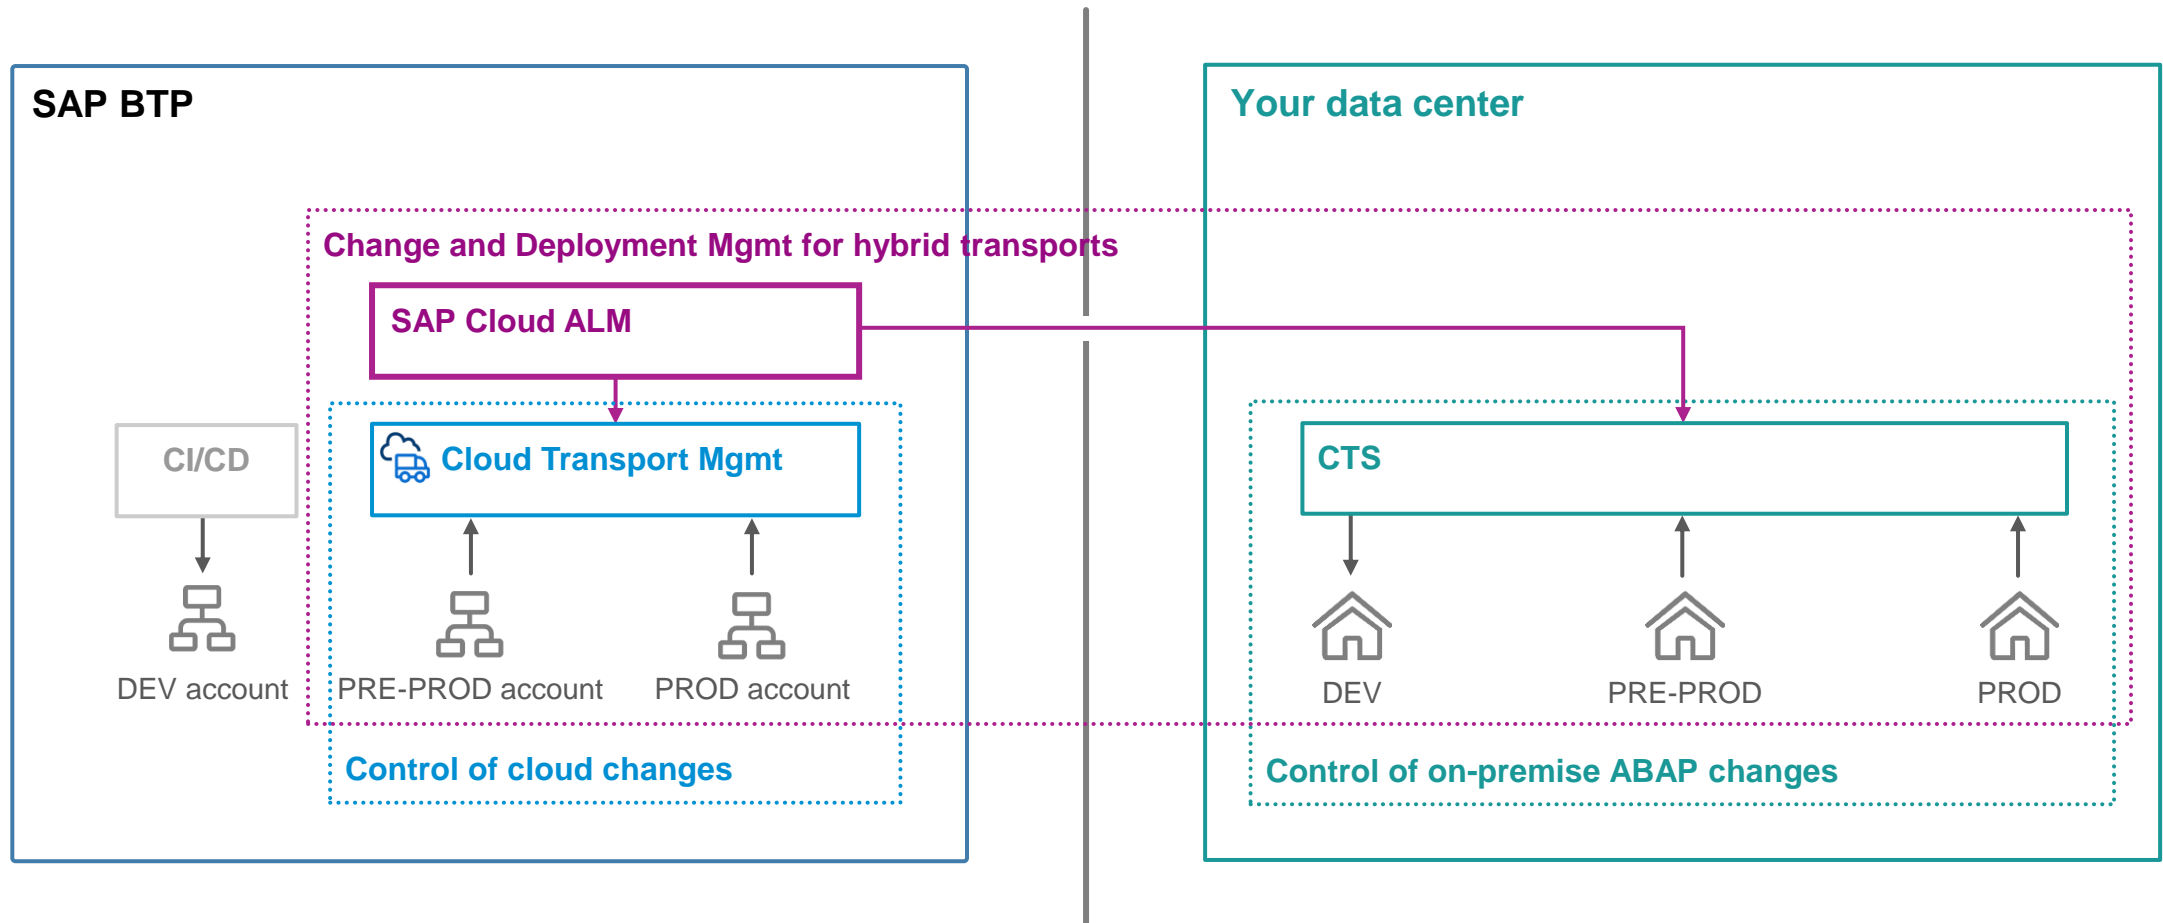

This allows synchronized transports of ABAP on-premise (via CTS), non-ABAP on-premise (via CTS+) and cloud artifacts (via cTMS) in hybrid projects.

This setup is very important for customers with strict audit requirements (like banking or pharmaceuticals).

The prerequisite for integrating cTMS with SAP Solution Manager is release 7.2 with SPS10 (available as of December 2019).

Integrate cTMS with SAP Cloud ALM

Integrate cTMS with SAP Cloud ALM

SAP Cloud Transport Management (cTMS) is reused from **SAP Cloud ALM** as the transport tool for cloud transports. The cTMS transport requests are attached to features in Cloud ALM. These features can also handle CTS-based on premise transport requests

This allows synchronized transports of ABAP on-premise (via CTS) and cloud artifacts (via cTMS) in hybrid projects.

This integration is available from May 2022.

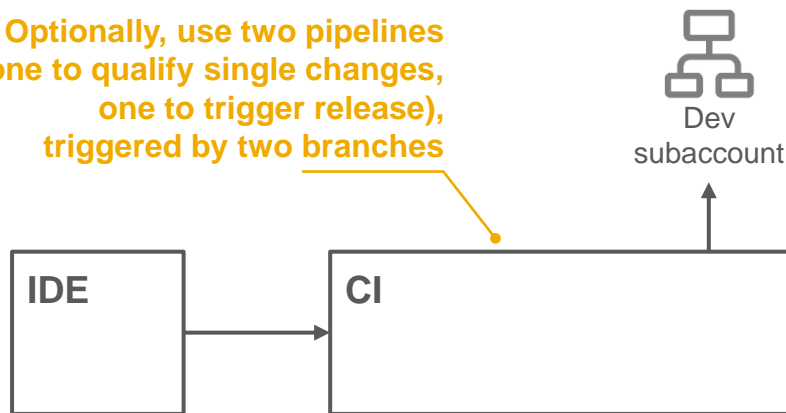

3. Deliver your cloud changes toward production

Development landscape

- Based on *Continuous Integration* principles, managed by local DevOps team
- Verification of single developer change
- Typically fully automated

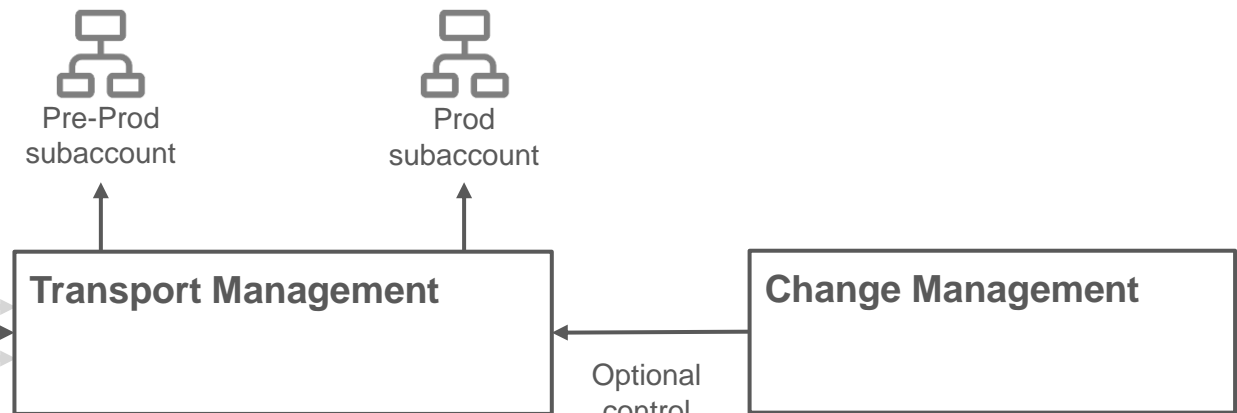

Optionally, use two pipelines (one to qualify single changes, one to trigger release), triggered by two branches

Open source/
3rd party + Project
"Piper"

Delivery landscape

- Based on strict *Transport Management* rules (policies, schedules), centrally managed by ops/approvers
- Verification of release candidate version
- Typically done with manual confirmation

(CTS+)

Holistic Picture and Positioning of Transport and Change Management

Example for evolution of delivery approaches for a project

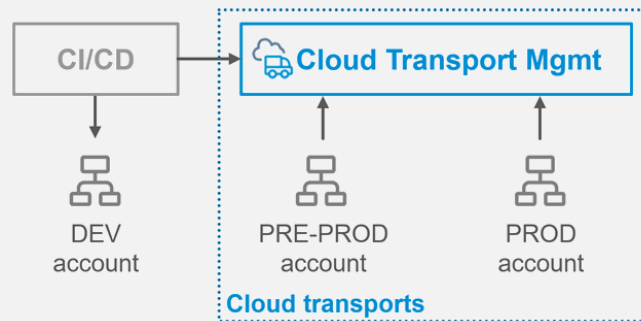

3 Hybrid interdependencies come up or get more important, so that you want to control them by synchronizing on-premise changes with cloud development

2 You release your project and want to have more control of your prod environment

1 You start your project with a pipeline

Consider **Project “Piper”** and **Continuous Integration and Delivery service** to set up your environment quickly

Configure **automated handover** of release candidates from pipeline to transport management

Integrate transport management into **change management**

Thank you.
