# Today's Mission

## Automate the Migration from SAP Process Integration to SAP Cloud Integration with the Figaf Migration Tool

[Start Mission](#) [More](#)

### Use Case

Clients using SAP Process Integration have to migrate to SAP Cloud Integration within the next ten years because SAP PI support is ending. The migration to SAP Cloud Integration is well worth it but requires reasonable development time.

At Figaf, we have built a tool that can automate the migration. So just in a few clicks you can migrate an ICO or Receiver Determination to an IFlow including Routing and Mappings, Function Libraries and Channels.

### Current Position

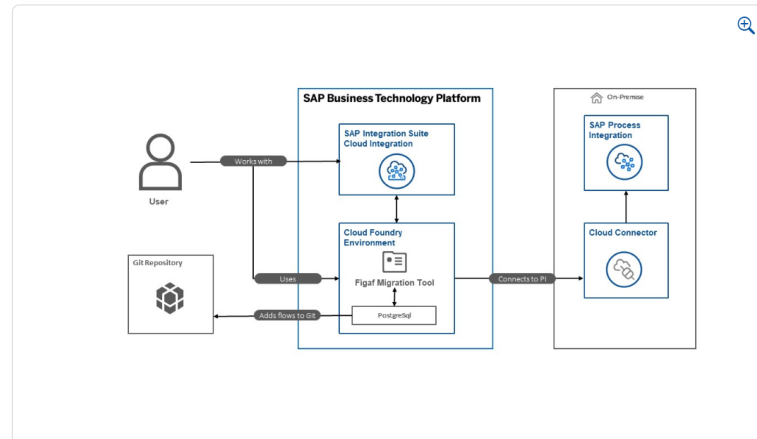

Currently, the migration from SAP Process Integration to SAP Cloud Integration is complicated and it takes a lot of time.

### Mission Destination

The Figaf Migration Tool converts the ICOs to IFlows with message mappings, and then transports these IFlows to production. Using this tool, you can test the integration the same way as on an SAP Process Integration system.

### How You Get There

The Figaf Migration Tool automates the migration from SAP Process Integration to SAP Cloud Integration. It also minimizes the risk of failure of SAP integrations, and helps you fix issues easier and faster.

### About Missions

Missions include best practices and step-by-step guidance for implementing use cases, with a well-established support from SAP partners and SAP Community.

### What it can do for you?

Starting a mission enables you to:

Customize for your business needs

Collaborate with your team members

Connect with Partners

Please note that this is FREE of cost. To learn more about missions, visit our [Help Center](#).
