

SAP Business Technology Platform

Accelerate Innovation in Media and Telco with SAP BTP

Rams Srinivasan

November 2023

**Global Center
of Excellence**
SAP BTP

What Is SAP BTP?

The platform that brings together application development, automation, data management, analytics and planning, integration, and AI capabilities into one unified environment optimized for SAP applications

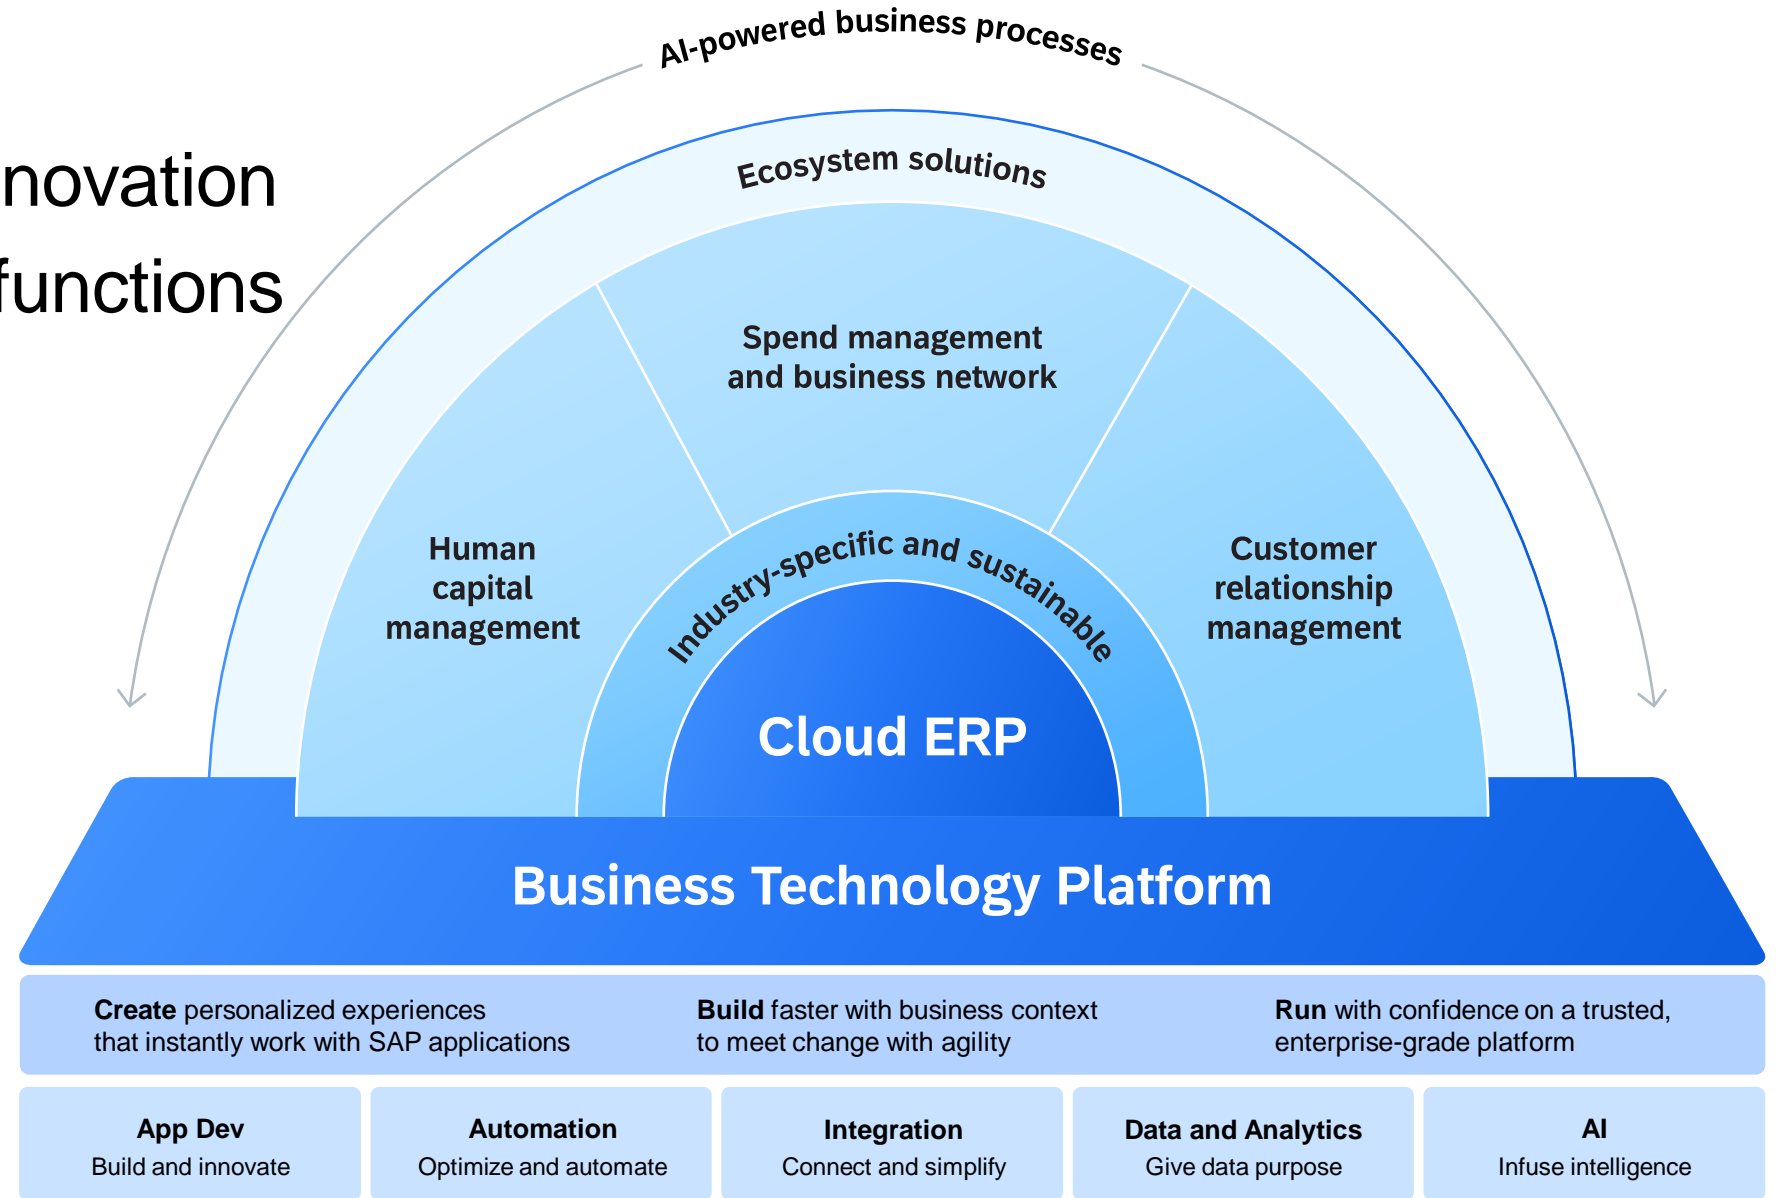

It is a comprehensive solution with:

- An intuitive, modern development environment for both, professional IT and citizen/business developers
- Prebuilt data models, integrations, workflows, app templates, and AI business services
- Self-service data discovery, modeling, planning and analytics, for business users in a governed environment

SAP BTP

Unleash digital innovation
across business functions

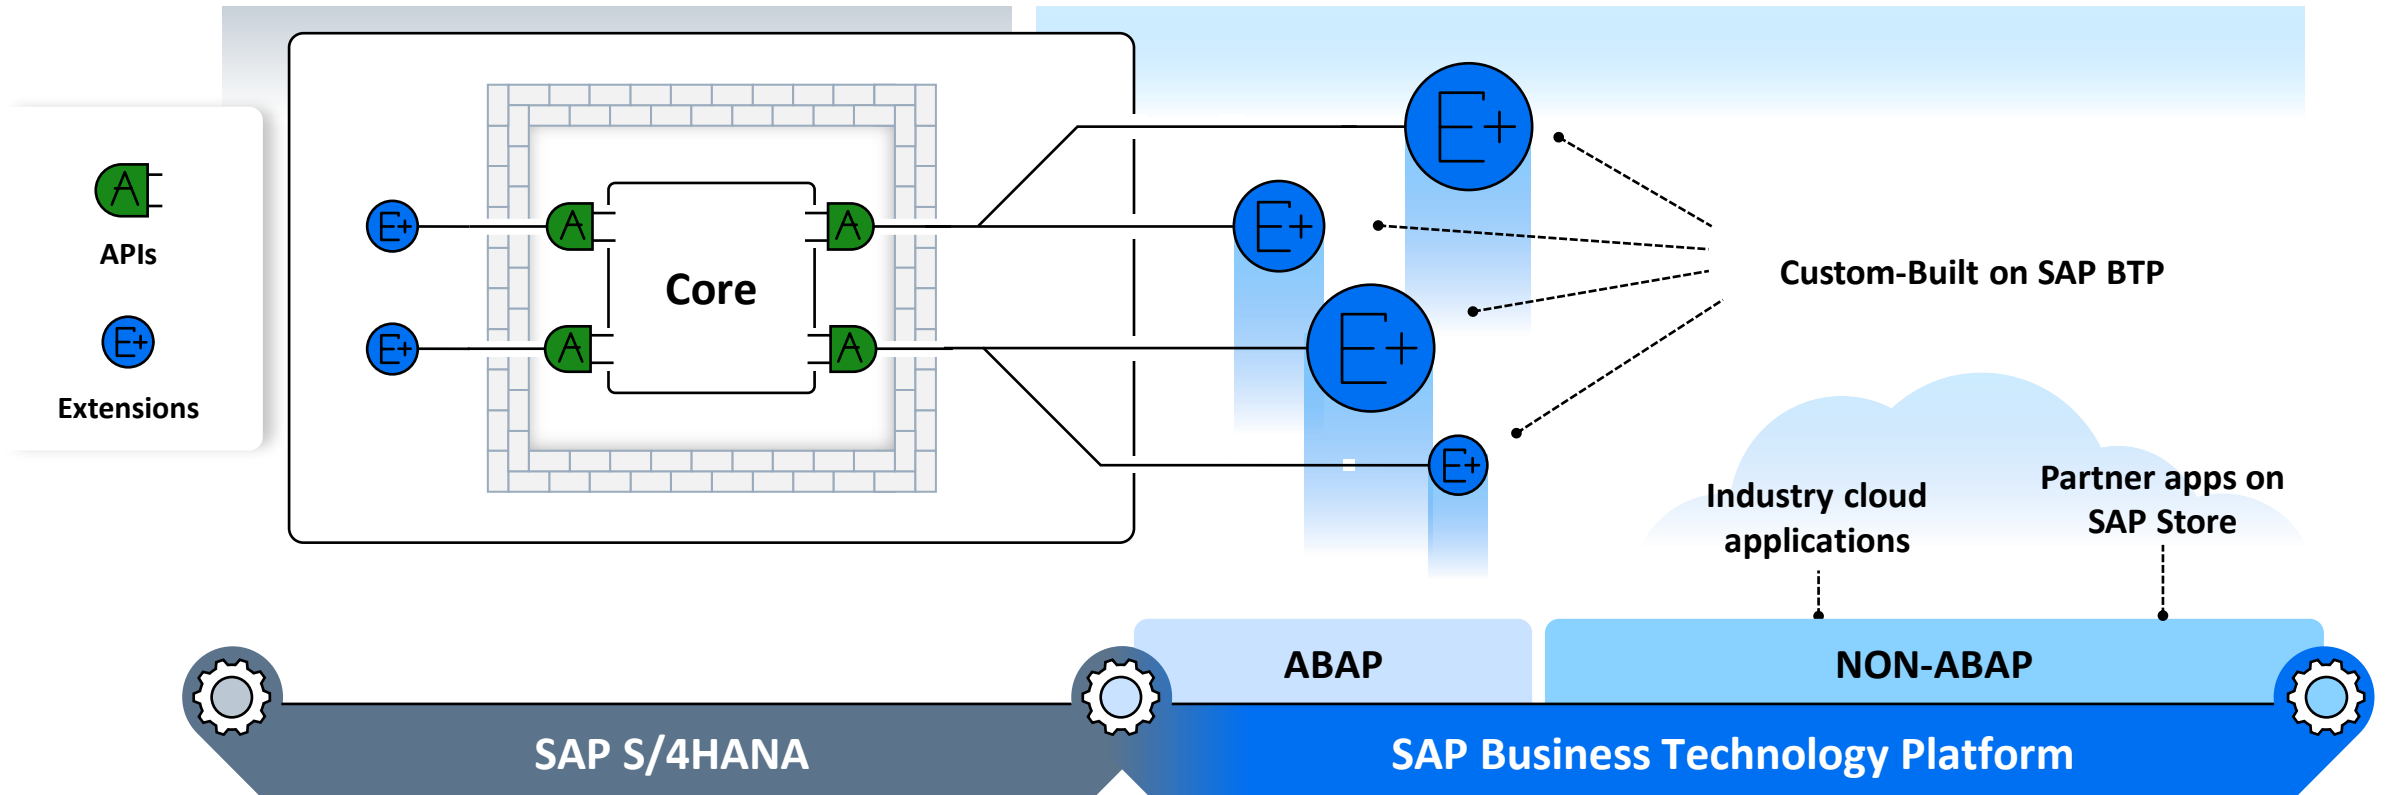

Application Development – Build and Innovate

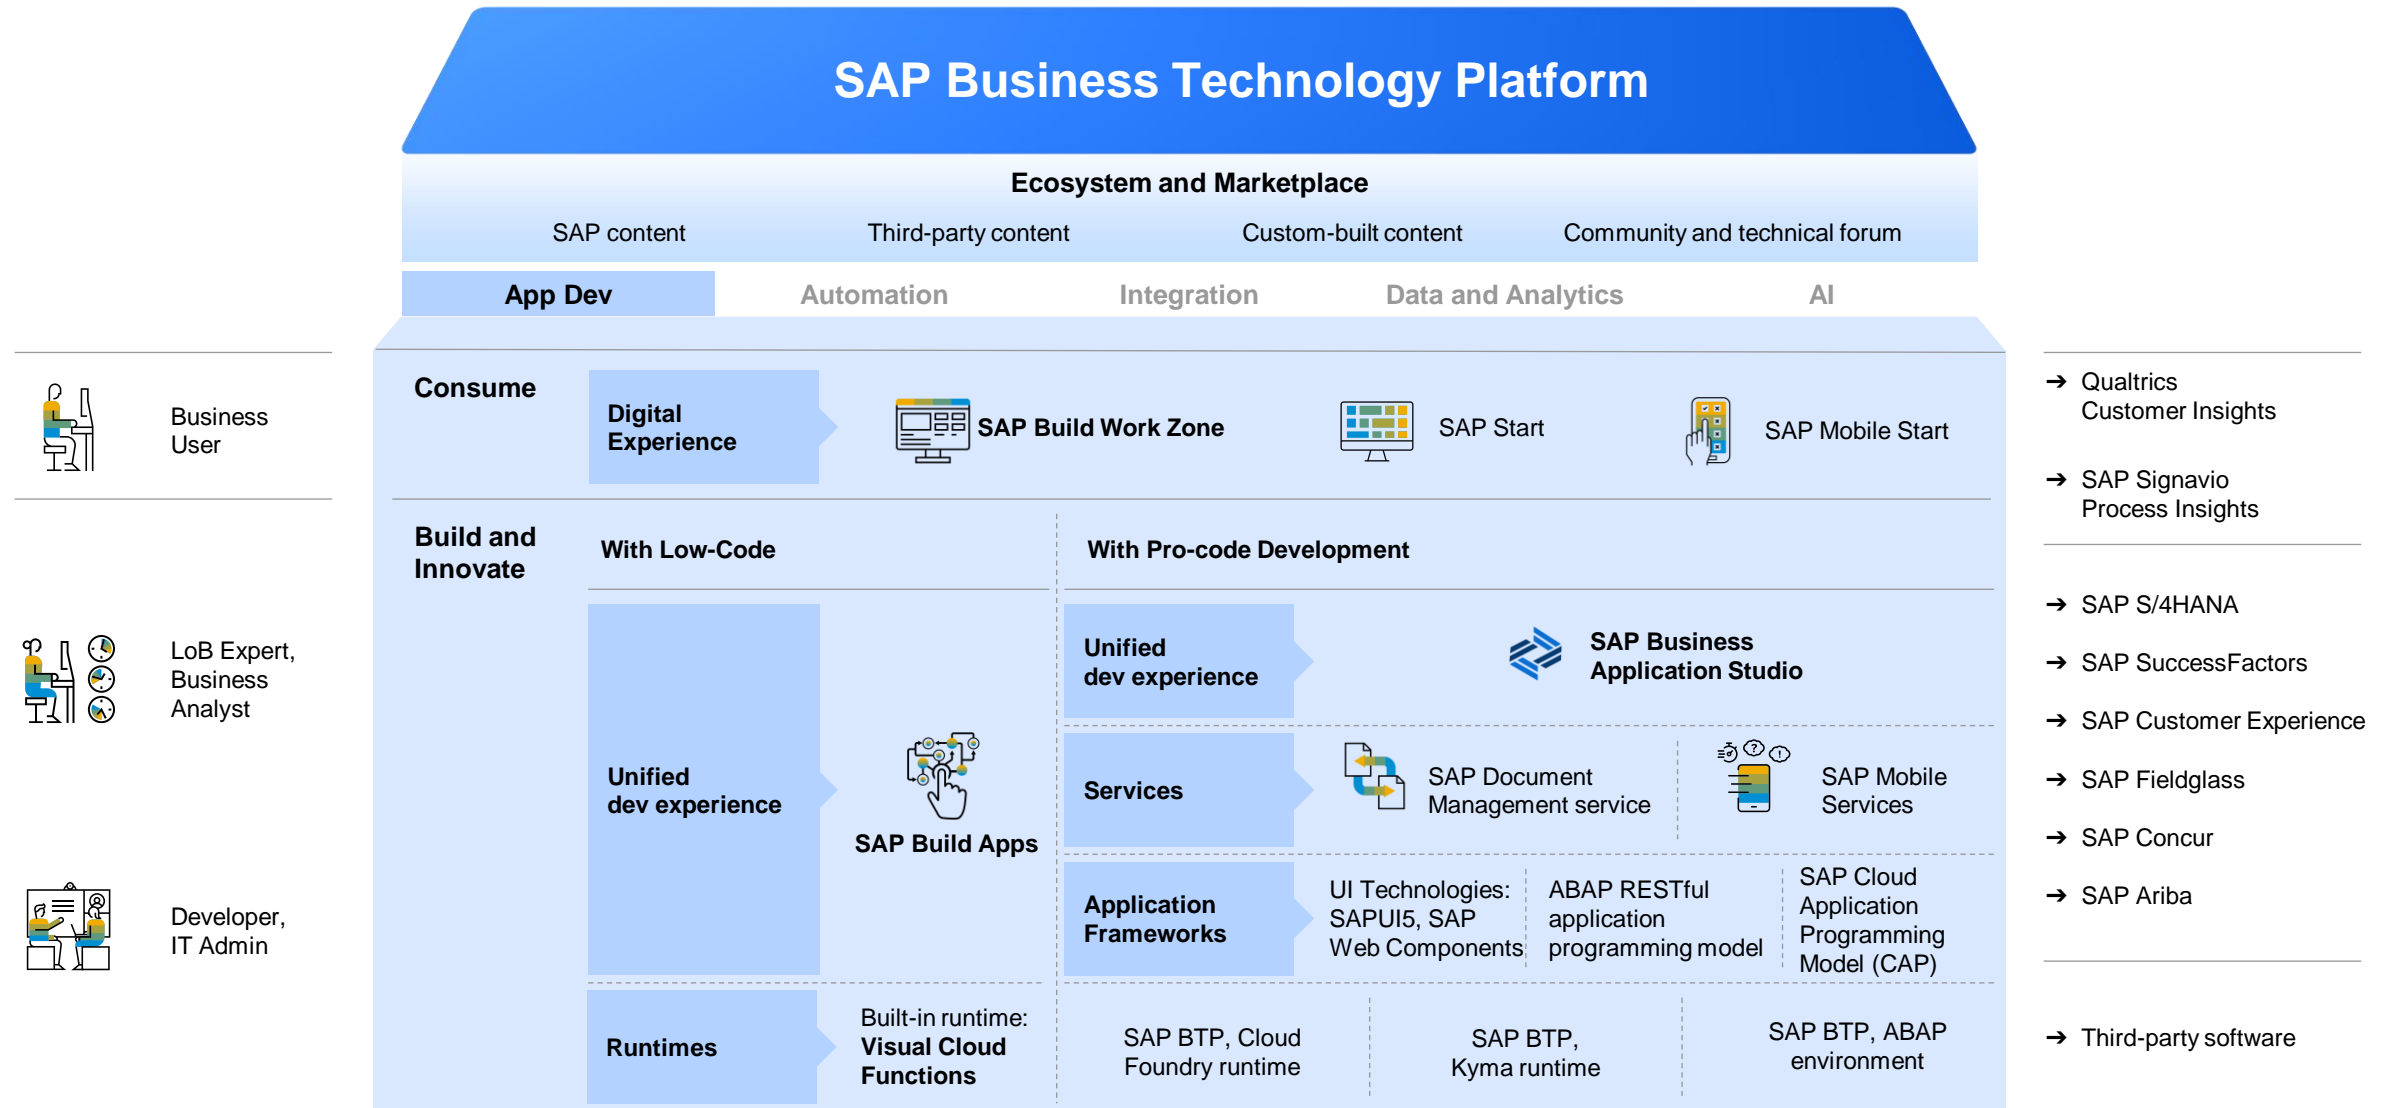

- **Simplicity** without compromise with tools for developers of all skill levels
- **Augment SAP applications faster** with the industry's broadest set of pre-built components
- **Deliver personalized experiences** through unmatched integration and connectivity with SAP and third-party applications

The concept of a clean core is the essential key to boundless extensibility

Application Development with SAP Business Technology Platform

Automating Machinery Maintenance Processes with SAP® Build Apps

Before: Challenges and Opportunities

- Mission to guarantee top-quality food by ensuring all machinery operates properly according to reliable and accurate maintenance processes
- Technicians printing multiple maintenance orders, recording task execution details on paper, and manually inputting data from paper records to the ERP system one at a time on a daily basis
- Manual administrative processes proving highly time consuming, convoluted, repetitive, and prone to human error, with maintenance cost miscalculations and technicians diverted from core responsibilities

Why SAP

- SAP® Build Apps development environment, part of SAP Business Technology Platform (SAP BTP), to allow the IT team to intuitively create and implement an enterprise-grade application without writing code
- SAP Integration Suite to enable smooth integration of SAP Build Apps with the existing on-premise ERP system

After: Value-Driven Results

- Launched a mobile application in record time thanks to the cloud-based graphical development environment and low-code, no-code technology of SAP Build Apps
- Allowed technicians to record maintenance tasks on mobile devices in real time at the touch of a button
- Enabled the IT team to respond quickly to business needs and gain operational agility
- Decreased paper use in line with the company's paperless strategy, with a 10% reduction in paper waste
- Minimized documentation errors and the need for data reworking, helping ensure accuracy of maintenance costs and compliance with local legislation through up-to-date reports

“With the low-code, no-code technology of SAP Build Apps, we were able to go live with a mobile application in a **record time of three weeks**, providing a fast response to our business needs.”

Lauro Salgado, Systems Development Specialist, Pif Paf Alimentos

Improve Efficiency Through Financial Process Innovation at BBC Studios **with Apps and Extensions Built on SAP BTP**

Before: Challenges and Opportunities:

BBC Studios Distribution competes commercially with other leading Media organizations and is meant to provide a firm financial base for their work. Their existing legacy Financial system were no longer able to deliver efficient processing or analysis. They required an innovation platform with user-rich functionality to leverage intellectual property and enhance creative reputation, as well as enable real time information and robust reporting. Maximizing their commercial potential required a simplified, efficient and cost-effective financial system; a data model aligned to their operating model; and a set of standardized global processes able to support their goal of being a profitable, well-run company.

Innovations on BTP:

- Executive Purchase Order approvals via mobile devices using SAP's Mobile Cards - enabling a more efficient process at a senior organizational level
- Simplified Customer Maintenance App - Prior to the implementation of the App, incorrect attribute information led to reporting issues. Now, the App auto-determines many of the attributes previously defined manually, supporting the move to standardised data models
- New SAP Fiori apps covering functionality not yet implemented in SAP S/4HANA – including an extended Journal Upload App, Purchase Order Entry App and manual A/P document Upload App
- Microservices to support Material key mapping from heritage products to a new Content design
- Standard enterprise data model (major benefits of easier integration, better reporting)

After: Benefits:

- Simplified system landscape, enabled other on-premise solutions and projects to be progressed, fitting to a stable and high quality digital core, with consistent organizational structures, data and processes across BBC Studios.
- Reduced direct processing costs and end user effort, improved Executive management enablement with Mobile App solution, Improved Finance users experience with SAP Fiori and SAP Analytics Cloud front ends

BBC Studios is a commercial subsidiary of the BBC that was formed in April 2018. BBC Studios creates, develops, produces, distributes, broadcasts, finances and sells content around the world.

Automation – Optimize and Automate

- **Automate Visually:** Simplify automation with drag-and-drop and AI capabilities.
- **Integrate Seamlessly:** Develop faster using pre-built workflows, bots and connectors for SAP and non-SAP systems.
- **Collaborate Securely:** Enable fusion team development in a secure and agile fashion.

Automation – Process Automation

Supporting Rapid Business Growth with RISE with SAP S/4HANA® and SAP® Business Technology Platform

Before: Challenges and Opportunities

- Reliance on disconnected business applications and manual processes
- Ambitious expansion plans to increase revenue fivefold by 2025
- Requirement for a scalable IT infrastructure that can grow with the business

Why SAP

- Unified digital foundation based on RISE with SAP S/4HANA® Cloud, private edition
- Scalable cloud-based ERP provided by SAP S/4HANA Cloud
- Online customer portal created using cloud portal, integration, and authentication management services offered through SAP Business Technology Platform (SAP BTP)
- Automation bots developed using the SAP Build Process Automation solution, enabling the automatic generation and sending of statements of account and payment advice
- Straightforward integration with the SAP® Service Cloud solution and SAP SuccessFactors® Human Experience Management Suite (SAP SuccessFactors HXM Suite)

After: Value-Driven Results

- Increased operational visibility, with on-the-go access to real-time data supporting decision-making
- More-efficient customer service, with service agents seeing a 360-degree view of customer information
- Faster access to account details and convenient payment options for customers using the online portal
- Improved employee experiences, with streamlined and automated workflows
- Future-proof IT infrastructure and expert guidance, enabling the company to take advantage of the latest innovations

“Integrated and automated processes based on RISE with SAP S/4HANA Cloud and SAP BTP are helping us **run more-efficient processes as we prepare for business expansion.**”

Integration with SAP Business Technology Platform

Building an HR System that Balances Global and Local Needs with SAP® SuccessFactors® Solutions

Before: Challenges and Opportunities

- Deploy SAP® SuccessFactors® Employee Central solution in Telefónica's four main business languages for more than 100,000 employees in 32 countries to establish a global standard HR system
- Harmonize information and create a central repository of master data for all Telefónica businesses
- Meet country-specific requirements for legal regulations, payroll, and localized processes
- Enable executives to evaluate performance across all businesses

Why SAP

- Strong global template of business processes and foundational objects that work across all countries
- SAP SuccessFactors Employee Central solution supports localization for all required countries
- Native integration of SAP SuccessFactors Human Experience Management (HXM) Suite with on-premise SAP ERP HCM Payroll solution used in Spain, Brazil, and Argentina
- Integration with other legacy and third-party systems via SAP Business Technology Platform
- Expert support and best-practice guidance from SAP Preferred Success services

After: Value-Driven Results

- Aligned HR processes in all businesses across 32 countries, while allowing for regional nuances
- Gained a unified overview of HR and payroll without having to duplicate connections and processes or rely on third-party vendors
- Helped to ensure that Telefónica fulfils the local laws of each country in which it operates, maintaining legal and regulatory compliance
- Empowered executives to create global KPIs, enabling them to make strategic decisions based on data
- Modernized and strengthened the HR function, making it fit to support future business growth

“Telefónica is a truly global company, with operations all over the world. SAP SuccessFactors solutions offer the high degree of localization we need to serve the needs of all our businesses across the globe while delivering a consistent employee experience.”

Driving Retail Innovation with Integrated Business Processes Enabled by SAP® Solutions

Before: Challenges and Opportunities

- Huge data volumes in a large-scale, complex, and highly fragmented hybrid retail system landscape, with paper document flows being unreliable, environmentally unfriendly, and expensive to maintain
- Desire to shorten time to market for IT solution delivery, optimize business processes and franchisee relationship management, and introduce digitalization to reduce significant paper usage

Why SAP and i2switch

- SAP® Business Technology Platform (SAP BTP) as the integration backbone for implementing centralized franchisee relationship management and an e-signature solution for a paperless process
- SAP Integration Suite to enable integration of processes for e-logistics, franchisee relationship management, advanced analytics, point-of-sale data management, and Web portal and mobile app delivery
- SAP HANA® Cloud database to provide a dedicated data model for APIs and enable data integration
- SAP S/4HANA® Retail solution for merchandise management, enabling best practices, intuitive reporting, and process optimization of data exchange between central systems and distributed store applications
- Expertise and support for the IT architecture and business process remodeling from i2switch

After: Value-Driven Results

- Enabled 360-degree data insights and real-time information for better decision-making
- Employed electronic documents with digital signatures to help ensure security, transparency, consistency, and increased efficiency of communications
- Reduced IT solution delivery times and network failures, and realized significant improvements in performance and system monitoring
- Increased efficiency of franchisee recruitment by up to 30% and improved franchisee support services

“Building an intelligent integration core on SAP Business Technology Platform allowed us to accelerate environmental, social, and business process changes for more than 9,000 stores. Now, we can **stay a step ahead of our business needs** and provide solutions for changing retail processes.”

SAP BTP

Unleash digital innovation
across business functions

Data-driven organizations fuel apps, AI, and planning with context and intelligence.

Business context and logic, especially metadata, has been removed from business data.

GenAI can be next revolution in productivity, but it requires context and quality data.

The majority of business users lack data context necessary for data to be useful.

Data and Analytics – Give Data Purpose

- Deliver meaningful data to every data consumer with business context and logic intact.
- Infuse intelligence into business processes with self-learning data applications that improve business operations and performance.
- Connect finance, HR, operational, and strategic planning with data and analytics on a single stack.

Integrated data and analytics portfolio to realize our vision

Planning and analytics

Extended planning and analytics

Provides an optimized, vertically integrated consumption layer for customers, LoBs, and partners

SAP Analytics Cloud

Data management and data warehouse

Business data fabric

Harmonizes access to SAP data (including business context) with the ability to feed in external data

SAP Datasphere

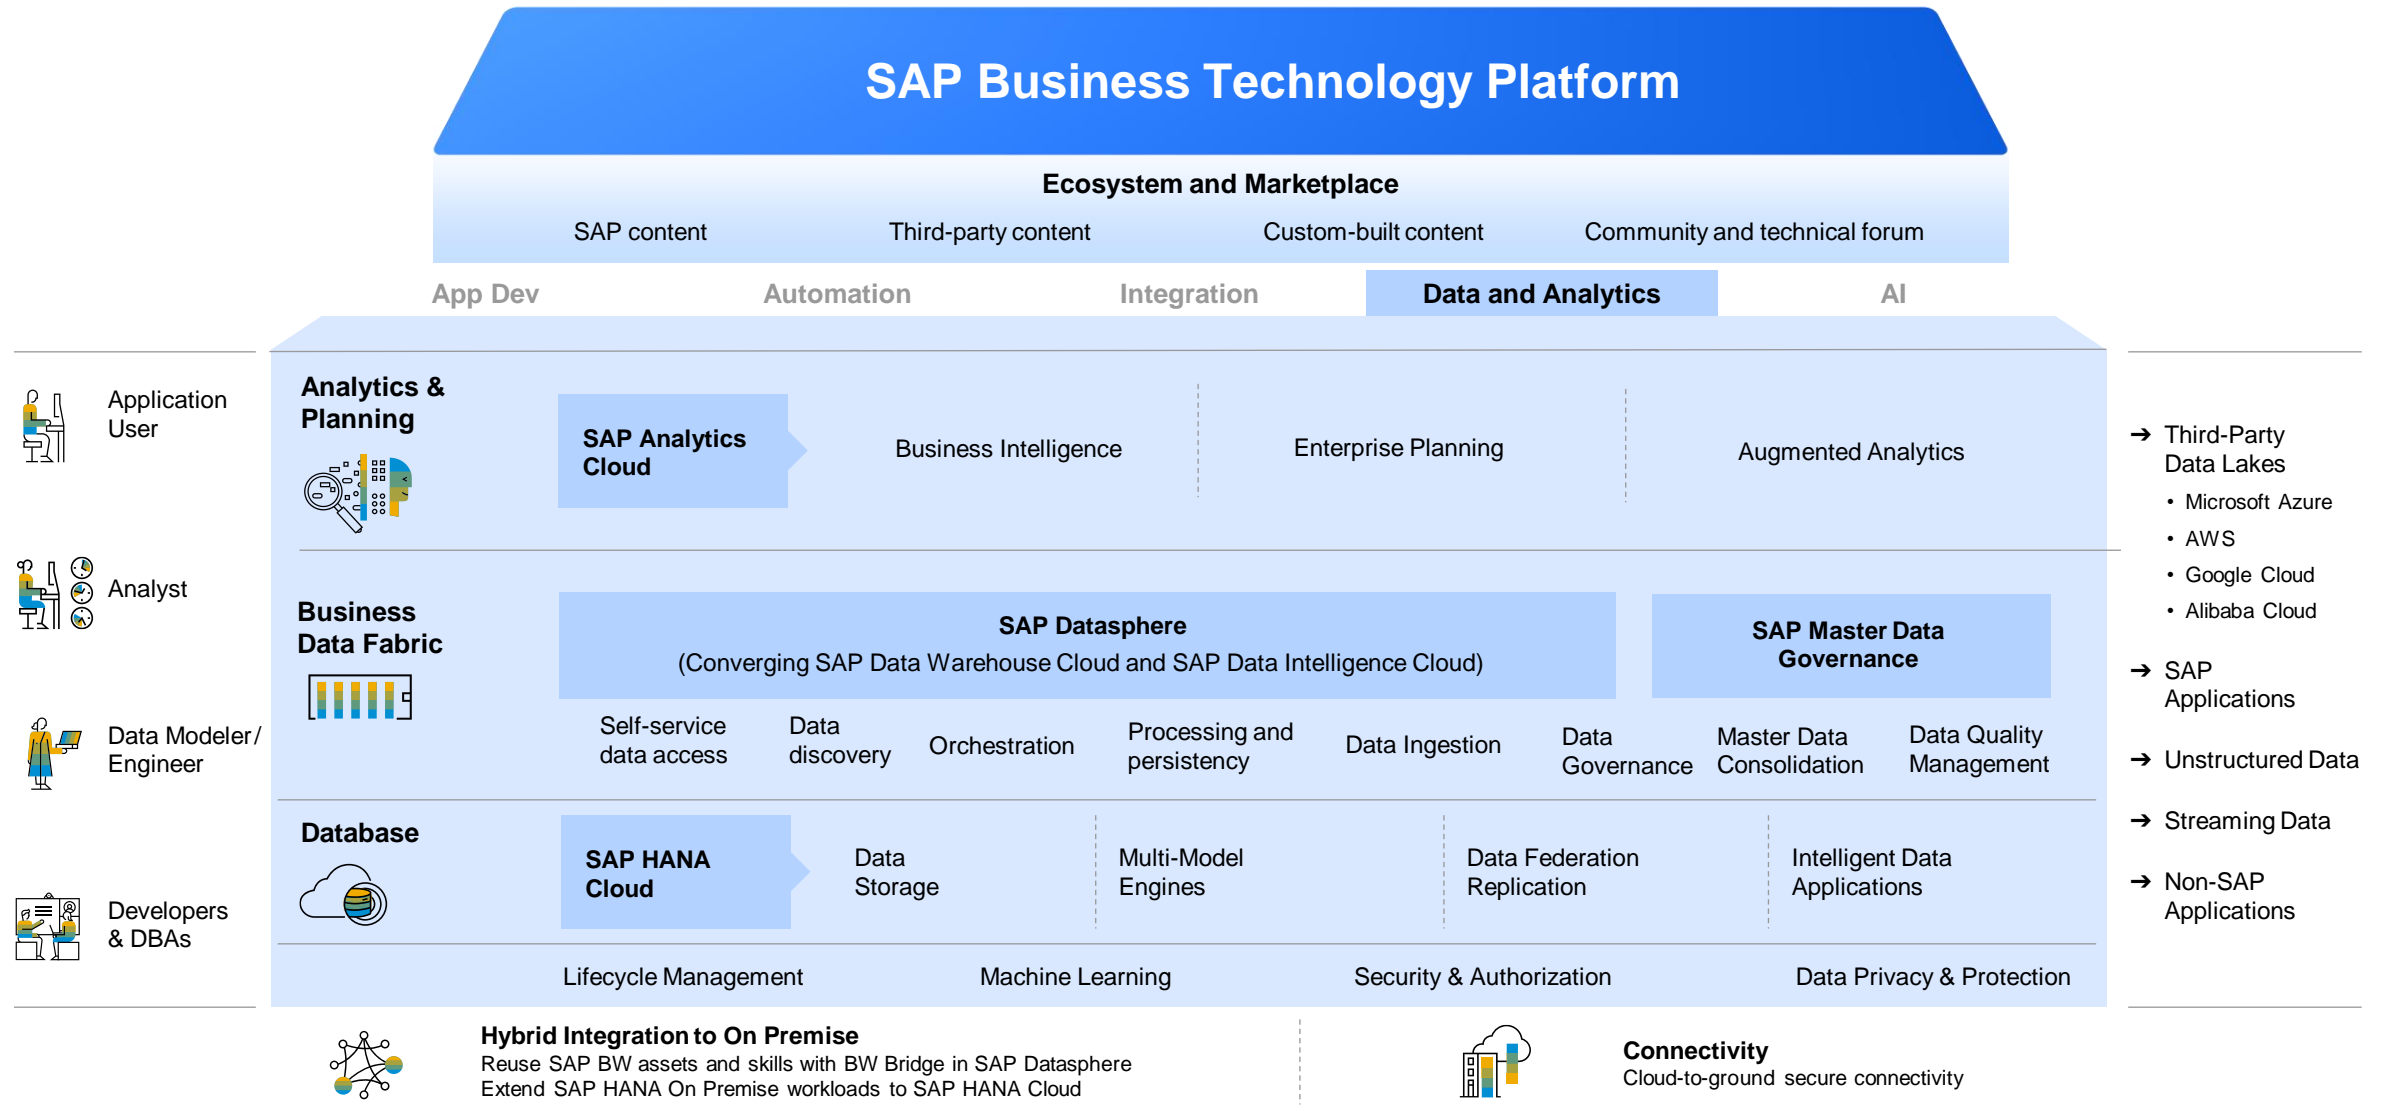

Operational databases

Intelligent data applications

Build apps leveraging analytical capabilities (ML, graph, spatial) of data tier combining historical and real-time data supported by services on SAP BTP (for example, pro-code/no-code app, development tools)

SAP HANA Cloud

SAP BTP: Data and Analytics

Enable Intelligent Decision Making at Anytime and Anywhere

with Realtime Business Insights Delivered on WeChat

Before: Challenges and Opportunities:

Sales figures for books and other sales data were normally manually downloaded by the responsible employee and saved as excel files on an ad hoc basis, then transmitted into mobile devices through WeChat Enterprise or mailboxes. It led to inefficiency for stakeholders to access the data from SAC on laptop and operate businesses on WeChat Enterprise on mobile while switching between the two tools all the time.

Directors and Ministry Supervisors from HEP have crucial needs of running business in WeChat Enterprise so they are able to achieve the real-time access and analysis for business data of compiling, printing and distribution activities, and it can enhance productivity of their employees. In order to realize online management of R&D and operation, it is necessary to understand the situation and figures of production and operation at anytime and anywhere by integrating the production and operation data between SAC and WeChat.

Innovations on BTP:

- Integration Service for SAC with WeChat Enterprise facilitated the interactive discussion and decision-making based on real-time data by browsing and forwarding SAC stories on mobile devices between Supervisors and managers

After: Benefits:

- The overall efficiency of online business management is significantly improved by leveraging SAC and Integration Service for SAC with Social Media Applications (WeChat Enterprise).
- SAC empowers Ministry Supervisors to real-time monitor and visualize KPIs. Effective data analysis helps them make better and confident decisions during operational process. WeChat Enterprise Channel allows managers to access SAC, easily view and share these important information in anywhere and at anytime.

Higher Education Press is one of the first publishing institution in China of university and college-level educational textbooks, which was founded on May of 1954. The company's headquarters is in Beijing.

30+
KPIs in SAC Stories

More than 30 KPIs are demonstrated in SAC stories. 30% of supervisors are now using Social Media integration for SAC for daily business.

Supporting Data-Driven Decision-Making with SAP® Data and Analytics Solutions

Before: Challenges and Opportunities

- Multiple, disparate data silos and a reliance on numerous third-party analytic visualization tools
- Data duplication and different database versions across different departments
- Complex data management and analytics infrastructure that was costly to maintain and difficult to safeguard from security risks
- Requirement to reduce IT time spent on reporting by providing business users with self-service modeling tools

Why SAP and Appexus Technologies Inc.

- Unified data and analytics foundation based on SAP® Business Technology Platform (SAP BTP)
- Consolidation and modeling of data from both SAP and third-party sources, using the SAP Datasphere solution
- Rich visualization functionality and self-service reporting tools provided by the SAP Analytics Cloud solution
- Project planning guidance and implementation support from SAP partner Appexus Technologies Inc.

After: Value-Driven Results

- Trusted view of the truth, streamlining reporting processes and increasing employee confidence in the data
- Intuitive self-service tools, providing business users with fast access to detailed analytics reports
- Less time spent by IT generating reports, freeing up time for higher-value tasks
- Simpler, cloud-based data and analytics infrastructure that is straightforward to keep updated while meeting data governance requirements

“With SAP Datasphere and SAP Analytics Cloud, we can give our employees the flexibility they need to **access and analyze data to support decision-making** while also maintaining robust security standards.”
