Description

SAP Data Intelligence allows data scientists and IT teams to collaboratively design, deploy, and manage machine-learning models with built-in tools for data governance, management, and transparency. It delivers intelligent and trustworthy insights to the right users, with the right context, and at the right time, while processing data across your distributed landscape. In addition, it connects data silos and increases visibility into global assets by processing data with a multicloud approach that is agnostic from the technology infrastructure provider, containerized, and based on open-source technologies.

SAP Data Intelligence: Metadata Explorer

Tools

- Metadata Explorer, SAP Data Intelligence Launchpad

Resources

- Help Portal Product Page
- SAP Data Hub Product Page on SAP Help Portal
- SAP Leonardo Machine Learning Foundation

Support

- How to report an incident
- Support component for this service: CA-DI

HOW can I get started?

Missions

Use Case

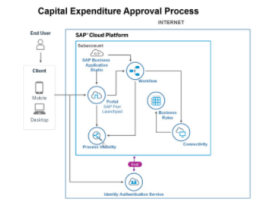

Learn how to use the SAP Workflow Management to model a Capital Expenditure Approval Workflow. Create and use business rules for the Capital Expenditure Approval using the SAP Business Rules service. And gain end to end visibility on the Capital Expenditure Approval Process using the SAP Process Visibility service.

Current Position - What is the challenge?

You wish to learn how to use the services provided by SAP Digital Process Automation, i.e. SAP Workflow service, SAP Business Rules service and SAP Visibility service.

Destination - What is the outcome?

Hands on experience of using SAP Workflow service, SAP Business Rules service and SAP Process Visibility service.

How You Get There

Model a Capital Expenditure Approval Workflow using SAP Workflow service.

Services and Components

- SAP Cloud Platform
- SAP Cloud Platform
- SAP Business Application Studio

Related Missions

Use Case

Involve an external business partner validation firm into a background check on your newly added business partners. Do this without the validation firm having direct access to your digital core, instead provide them with a custom developed extension application. See relevant data in this application updated in real time from SAP ERP 6.0 (ECC) using business events with the SAP NetWeaver Add-On for Event Enablement. Find relevant business partner data in your SAP ERP updated with validation results.

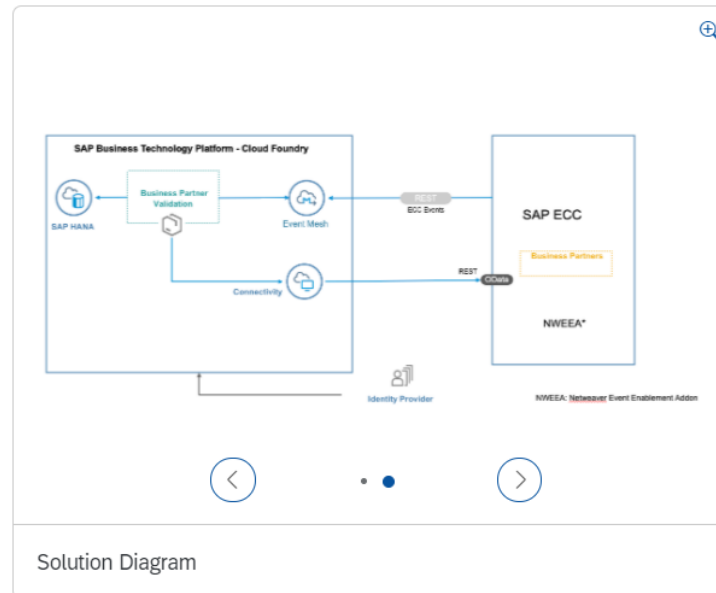

Current Position - What is the challenge?

- Business Partner data available only in SAP ERP system
- Third party vendor needs access to data in SAP ERP
- Background check on new business partners as soon as possible

Destination - What is the outcome?

- Custom extension application works independently from SAP ERP
 - Vendor personnel requires access to custom app only
- * Changes in SAP ERP communicated via events in real time to extension
- Flexible adjustment of extension to new business needs

How You Get There - What is the solution?
