- SAP Backend Development
- DevOps Services

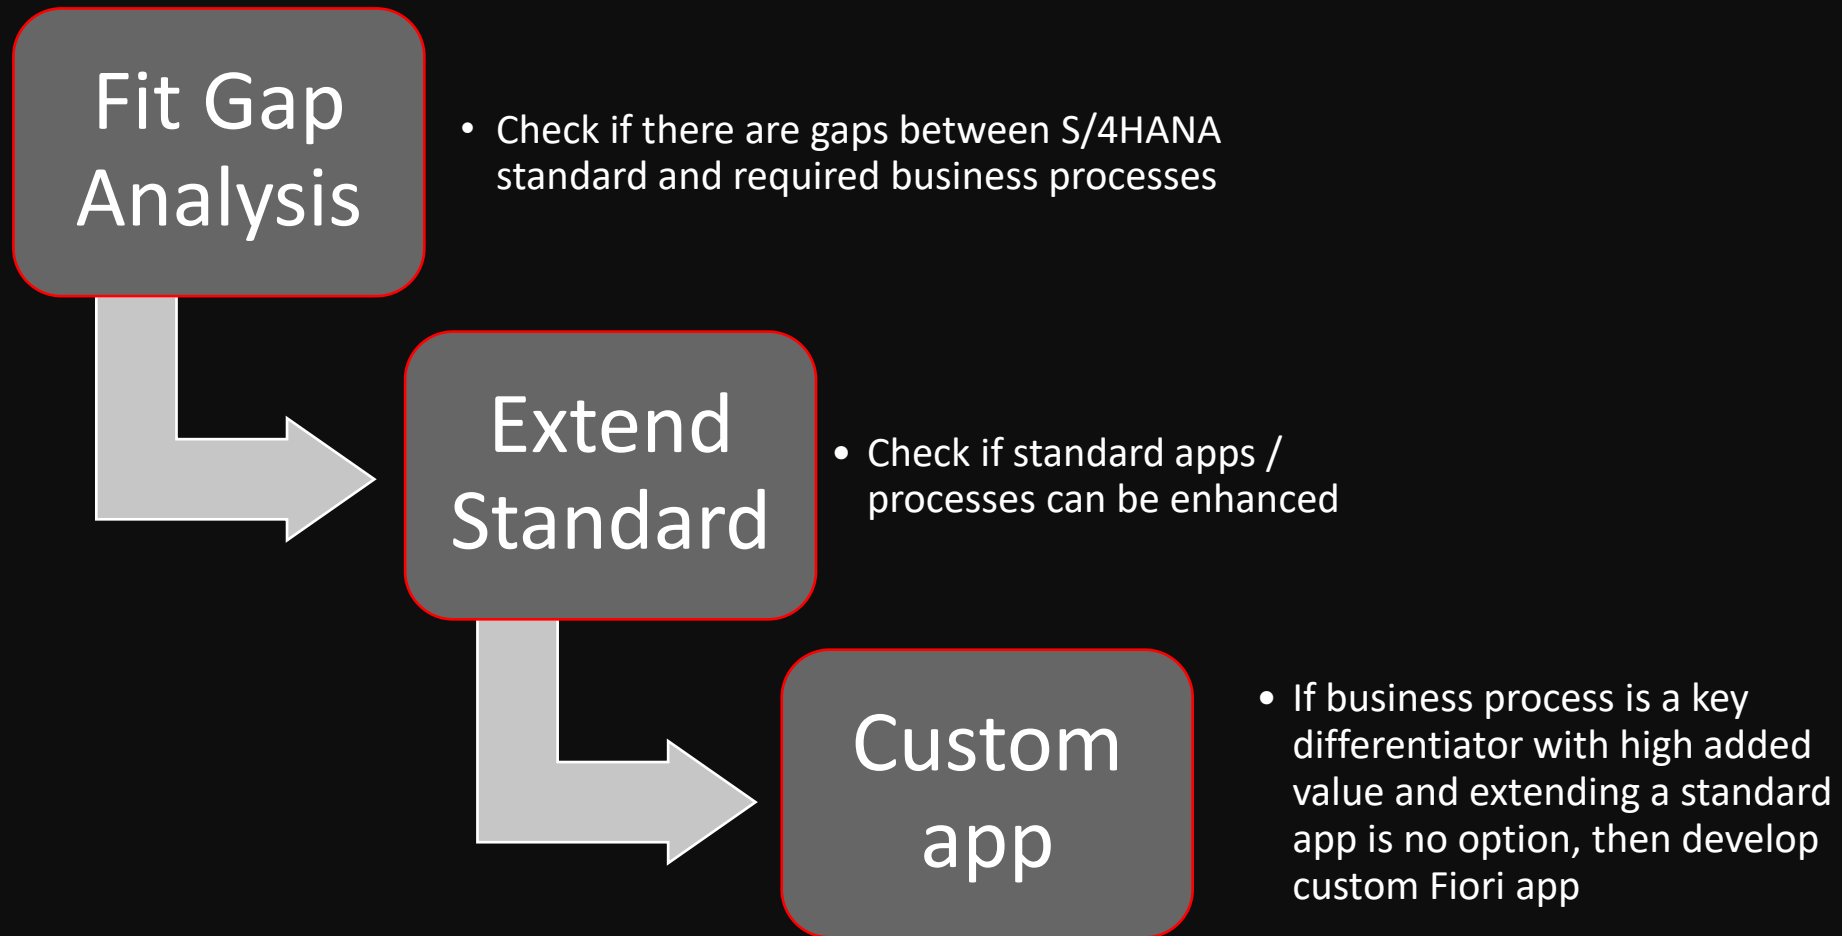

CLOUD TECHNOLOGY & ARCHITECTURE

- Integration Architecture and API Management Consultancy
- Extensive Knowledge of Cloud and On-Premise Integration Platforms
- Cloud Platform Architecture Design
- Consultancy, Development, Administration, Support and Monitoring

SOK'S BTP ROADMAP

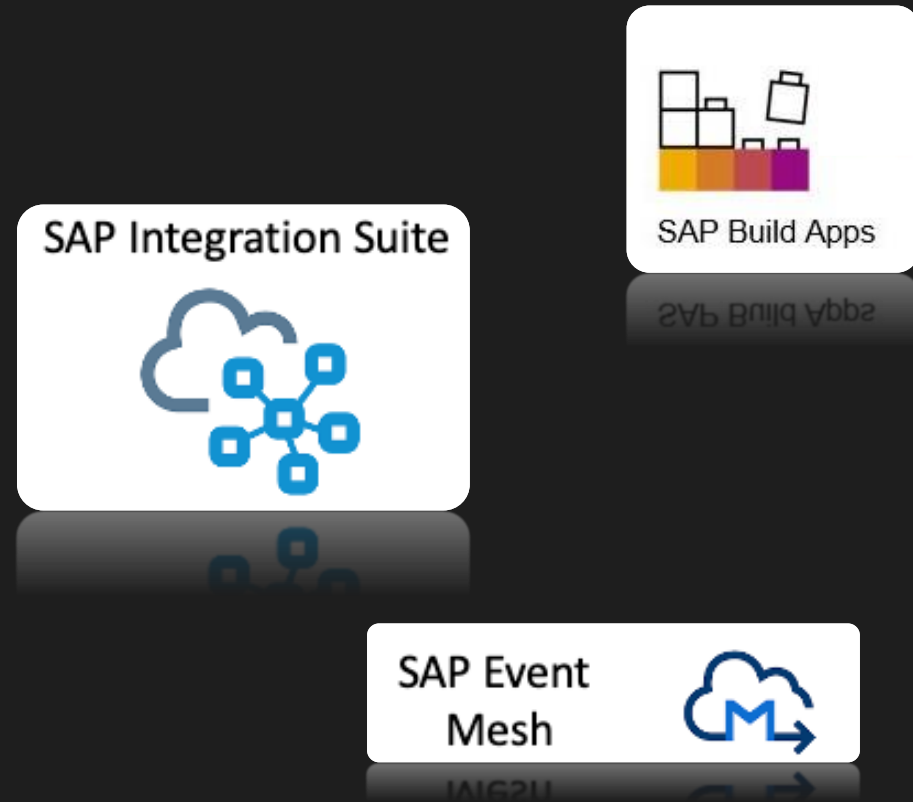

CUSTOM FIORI APPLICATION DEVELOPMENT

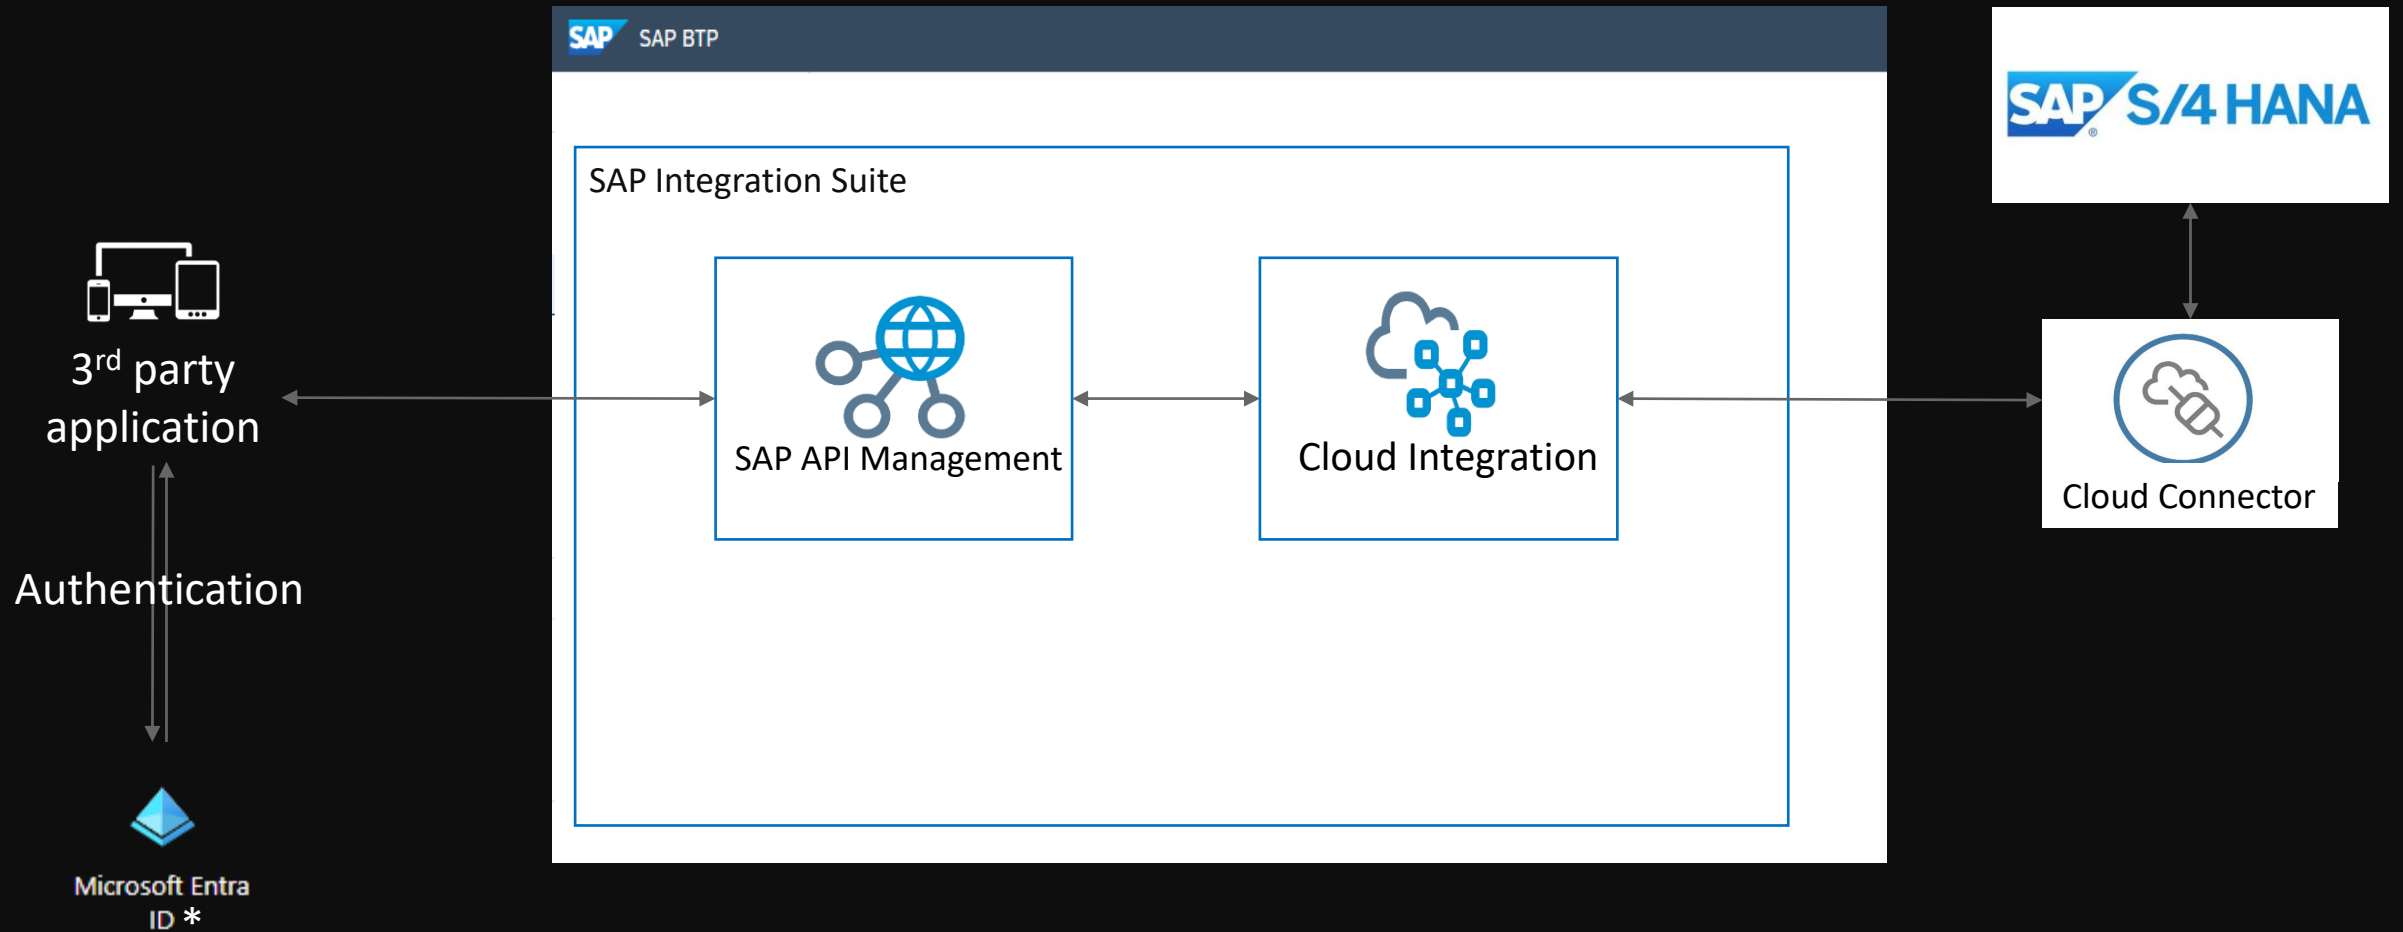

BTP ARCHITECTURE

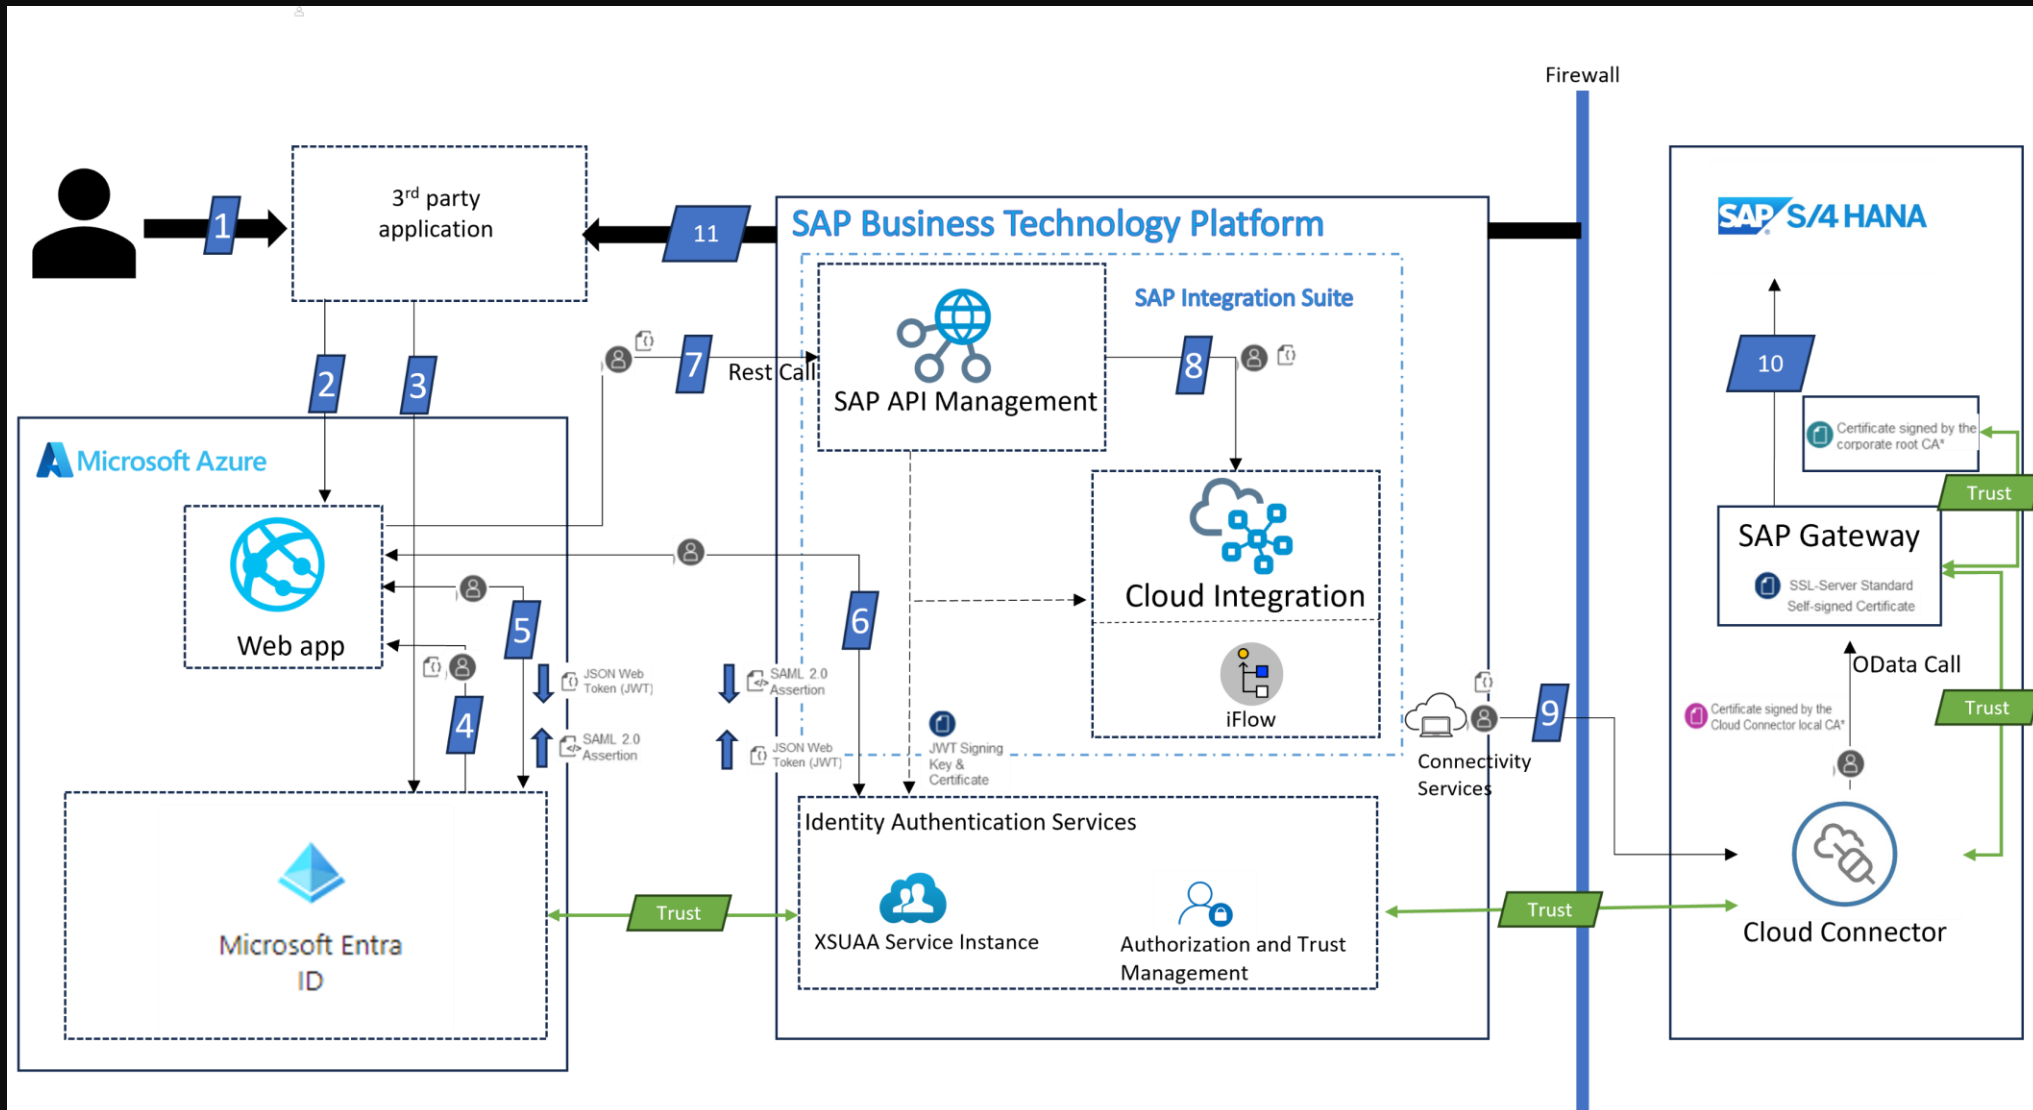

- Support and consultancy in BTP architecture
- Introduction to new concepts, such as SAP Event Mesh
- Support in setup of BTP services and connection to S/4HANA
- Proposal of future-proof solutions based on business requirements

SAP INTEGRATION SCENARIO (SIMPLIFIED)

SAP INTEGRATION SCENARIO (DETAILED)

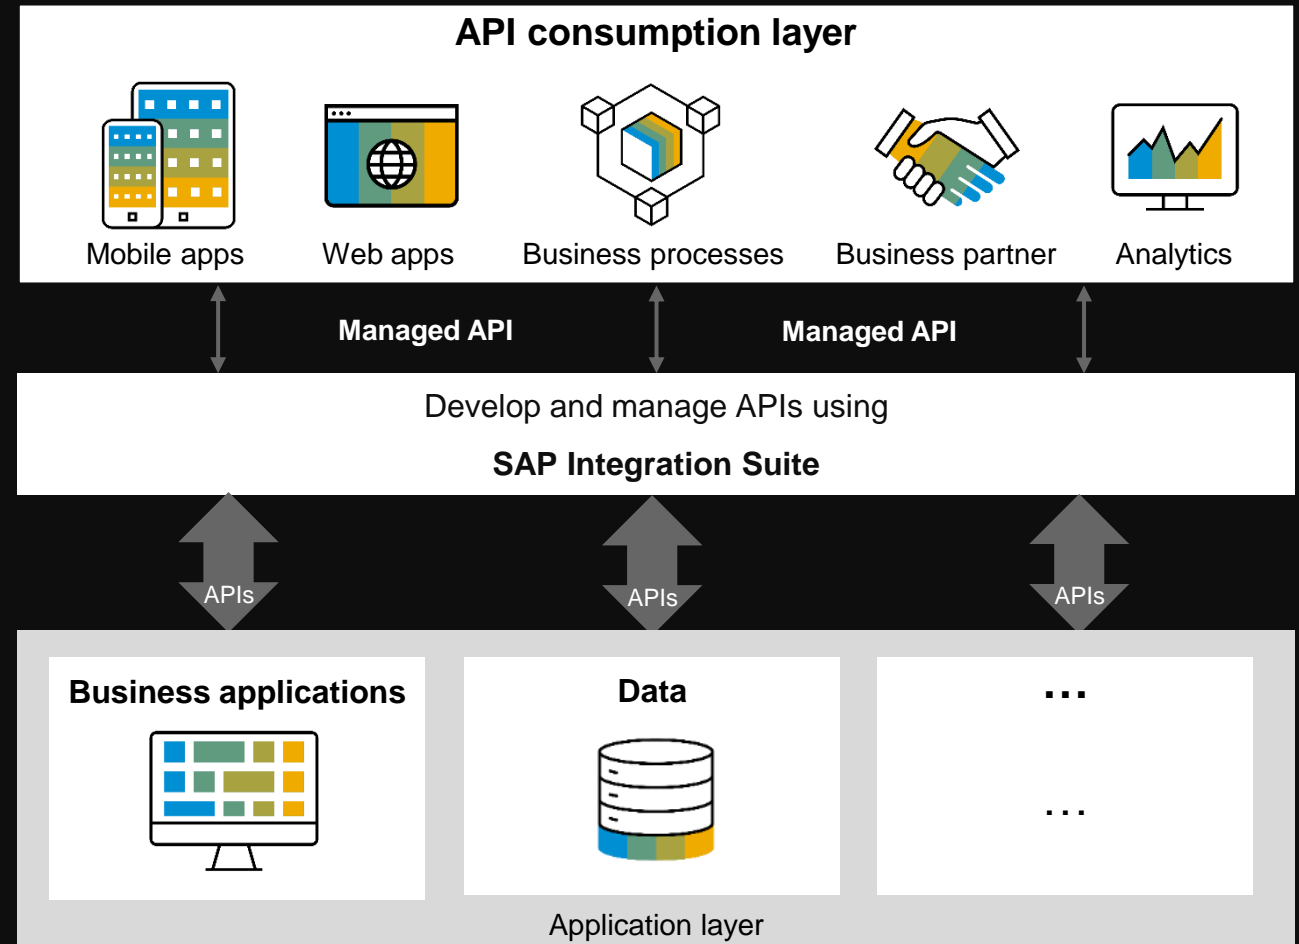

PRINCIPAL PROPAGATION

- forward the principal (identity of a user) across several systems in a complex system landscape
- avoid the use of technical users in each of the systems involved
- Single Sign On (SSO) using Microsoft Entra ID (Azure AD)
- Once the user is authenticated, the identity of the user is forwarded using tokens all the way to the SAP backend (via BTP, Integration Suite and Cloud Connector)
- Top 3 advantages:
 - Reliability
 - Security
 - Convenience for end-users

API-MANAGED INTEGRATION WITH SAP INTEGRATION SUITE

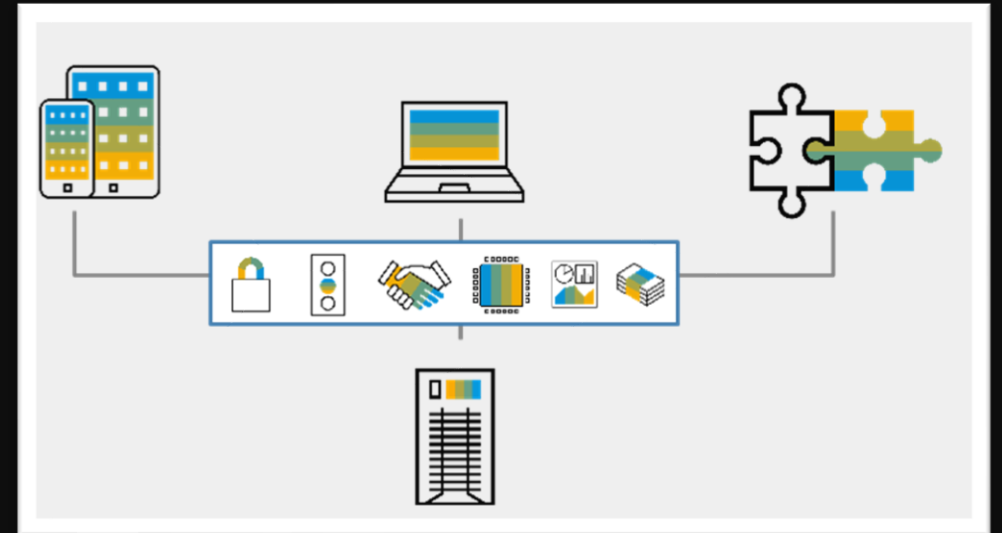

- APIs are digital building blocks for modern apps and open integrations.
- API-led integration connects applications with reusable APIs.
- API-led integration forms a foundation for interoperability across an enterprise ecosystem
- It helps you to integrate and expose your data, apps, and devices to your entire ecosystem.
- This approach accelerates the connectivity of information assets across the enterprise.

API MANAGEMENT WITH SAP INTEGRATION SUITE

Central governance of APIs

- Security policies
- Traffic management policies
- Publishing
- Analytics (usage, trends)
- Monetization

NEXT STEPS / OUTLOOK

- APIs, APIs and APIs
- Smart distribution of SAP data to different layers within SOK
- SAP's PO sunseting preparations
