Application Lifecycle Management

Application Lifecycle Management (ALM) from SAP provides processes, tools, best practices, and services to manage SAP and non-SAP solutions. SAP offers three ALM products for on-premise, cloud or hybrid solution landscapes: SAP Solution Manager, SAP Cloud ALM and SAP Focused Run.

August 18, 2021, Virtual
Application Lifecycle Management Community Call

I tried setting SAP Cloud ALM for Operations

0 3 141

Follow

Like

RSS Feed

SAP Cloud ALM, which was officially released about a year ago, is interesting because it is evolving and evolving.

What is SAP Cloud ALM?

Roughly speaking

- Manage tasks, requirements and tests during deployment
- You can monitor business processes, system integration, and jobs during operation.
- You can manage them easily on the analysis screen prepared in advance.

It is a solution to do.

SAP Cloud ALM in a minute

Focused Insights OCC Dashboard: Calculate values with a fixed operand

0 3 91

Follow

Liked

RSS Feed

Introduction

According to the official SAP documentation, to use the **Calculation Data Provider** (/SDF/DP_CALCULATION), two queries must be created that serve as operands. However, if you want to see data **calculated by a query and a fixed value**, there is a simple trick.

In this blog post, I'll take you step-by-step to a nice graph with fake data for demonstration purposes that is easy to customize for your own needs. Few words, lots of screenshots. I hope you enjoy it.

Data converted from hours to days through division by the fixed value of 24
Example: Average ticket processing time in calendar week 28/2021 - 530 days. You can do better!

Reason for exploring the Calculation DP

When reading chapter 5.2 of the SAP Community Wiki, which deals with the average processing time of tickets in

SAP Cloud ALM API - Custom kanban for Agile task management

1 6 351

Follow

Liked

RSS Feed

In this article, you will find guidelines for the new SAP Cloud ALM Projects/Tasks API and the SAP Sample Apps Github repository. If you are interested in Kanban boards for SAP Solution Manager 7.2, you may want to check [this blog article](#).

The official SAP Kanban Board sample app is built with Node 12+, HTML/CSS and jQuery. While I definitely recommend starting from scratch if you want to build a productive application, the sample is still a great tutorial to learn more about the CALM APIs. After a few changes, you can even build something quite user-friendly!

This is what I ended with:

ALM News & Updates

SAP Solution Manager

Process Management innovations

Edit documents online with any supported browser

Description

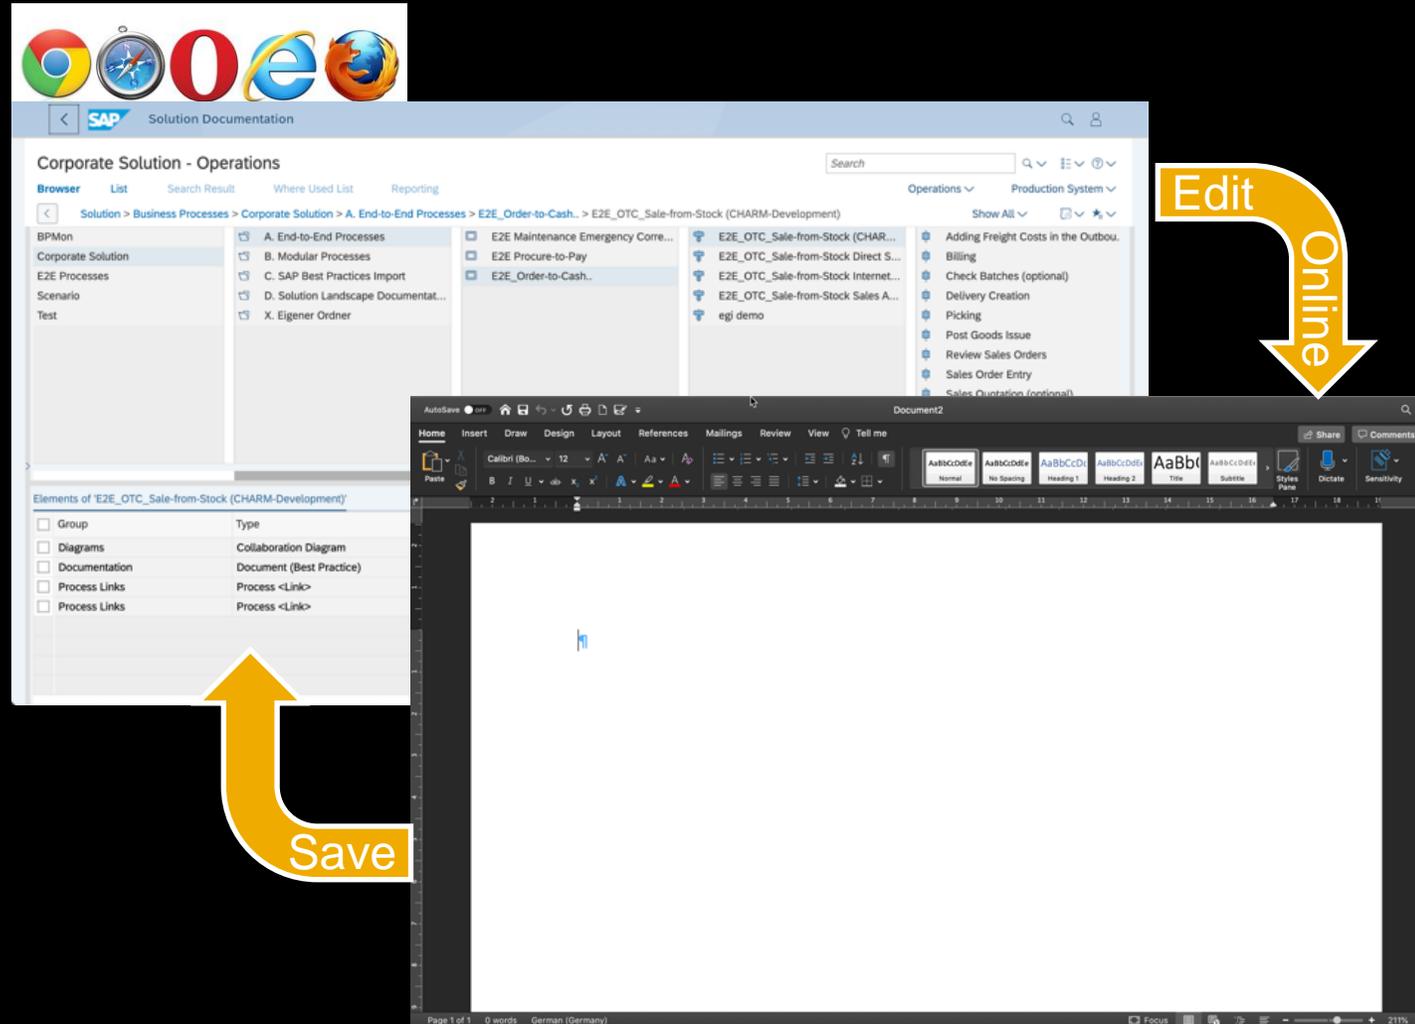

You can make use of the edit online feature for documents in any supported browser, based on Customer Connection improvement request [225481](#).

Details

- Save your work via edit online directly in the document
- No usage of ACF control and related restriction to use MS Internet Explorer anymore
- Edit online via SAP GUI office control in background
- See [SAP Note 3009338](#) (>= SPS10)

Benefits

- Reduced end user effort
- Better usability and user acceptance

Test Suite SUT Management - Mass password update

Description

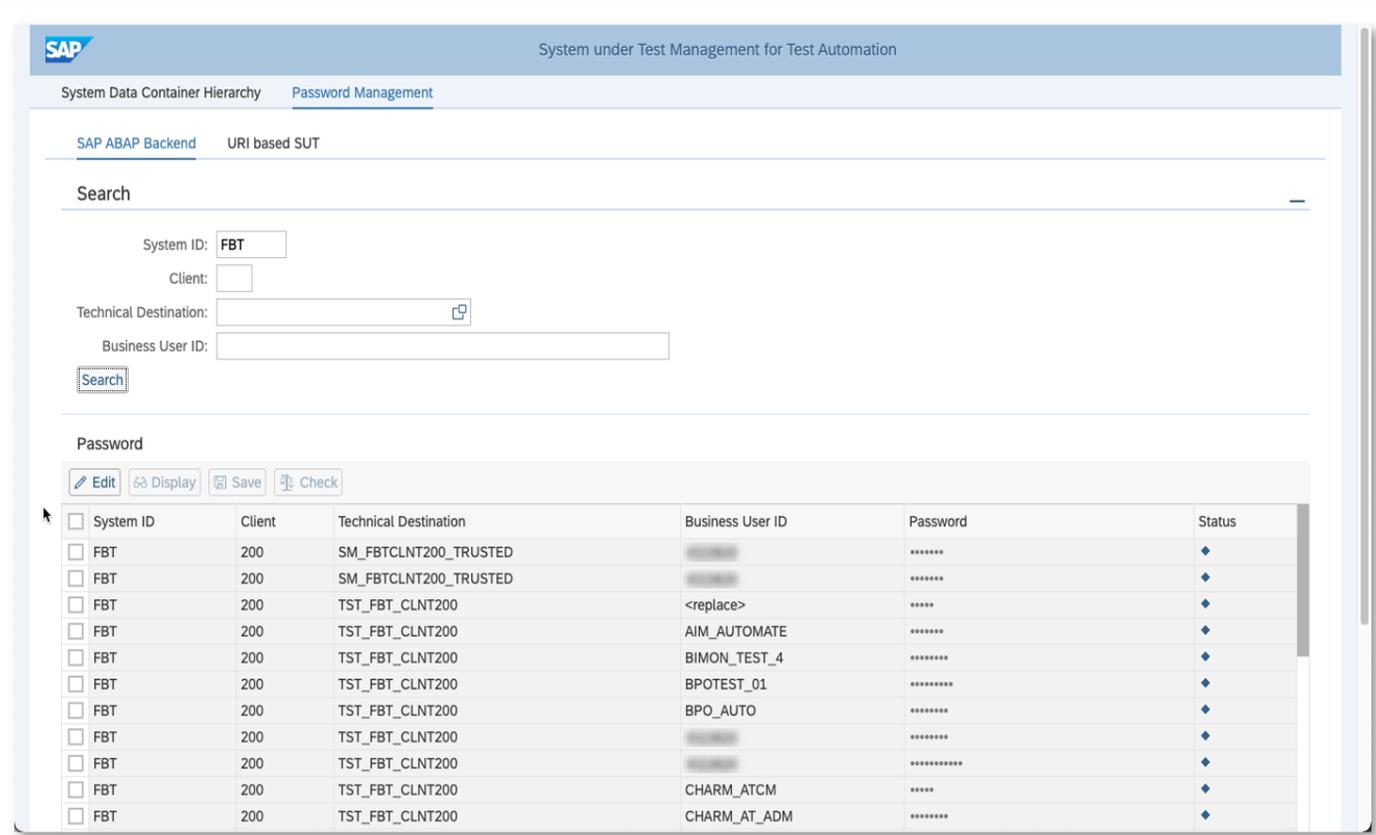

A new, easy way to maintain passwords in SUT management application.

Details

In order to ease the password update in SUT Management application, a new tab is available. Here, it is possible to maintain the passwords in a flat list, regardless of where they are used in the SUT hierarchy.

Benefits

- Improved maintainability
- Increased productivity

Test Suite Edit Online - MS PowerPoint supported

Description

Support of MS PowerPoint format in the Test Suite.

Details

The edit online capability within Test Suite (for test notes and test results) now also supports MS PowerPoint format.

Benefits

- Improved usability

The screenshot displays the SAP Test Suite interface. On the left, the 'My Tester Worklist - Test Cases' window shows a table of test cases. On the right, the 'Test Note Management' window is open, displaying details for a test note and a 'Test Note Online Editing' dialog box. In the foreground, a Microsoft PowerPoint application is open, showing a slide titled 'Next Step'.

PI Monitoring innovations

Simplified Message Monitor

Description

New simplified PI Message Monitor

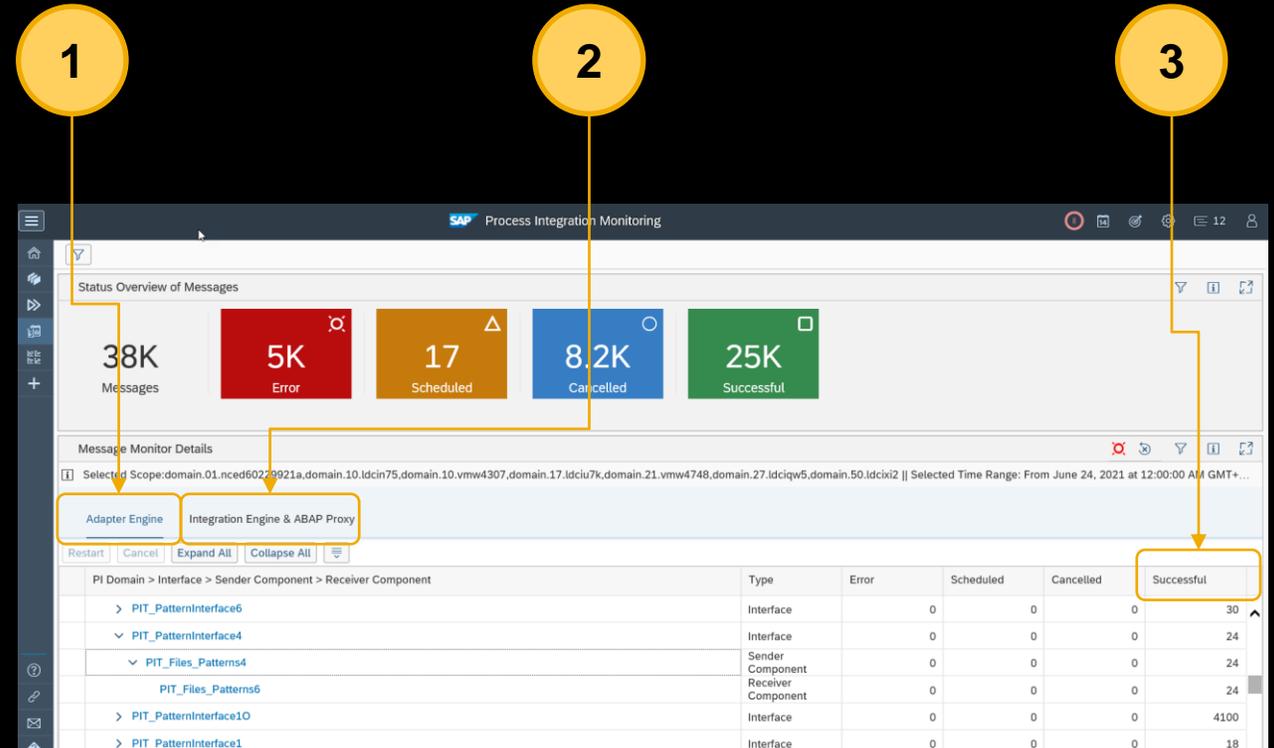

Details

Simplified Message Monitor contains:

1. One central Message Monitor for messages which are running through the Java Adapter Engine (Central and Decentral)
2. One central Message Monitor for messages which are running through the ABAP Integration Server and/or ABAP Proxy
3. Alignment on message status groups between the local and central Message Monitor (status SUCCESSFUL instead of FORWARDED)

Benefits

Common look between the Message Monitor in local PI system and the central PI Monitoring in SAP Solution Manager

Technical Administration innovations

IT Calendar allows to mass edit multiple work modes

Description

IT Calendar allows to mass edit multiple work modes

Details

You can change multiple work modes from the Upcoming events view in one shot

- For work modes which are already in progress you can change only the end time
- For work modes starting in the future you can change all properties

Benefits

Easy modification of multiple work modes

Job Management innovations

External job scheduling: Warning is provided if the start time of a job is in the past

Description

The user gets a warning if the start date is in the past, also available for external scheduling.

Details

For the XBP scheduling (direct ABAP job) the user could not submit a job with a start date in the past. Now, this is also checked in cases of external scheduling.

Benefits

Avoid accidentally scheduling a job at the wrong start date and time.

The screenshot displays the SAP 'Change Scheduling' interface for job ZCD_FBT200_EMEA_DE_SERV_XXX8 (SMSE). The 'Schedule/Change Externally' button is highlighted with a yellow box. A yellow arrow points from this button to a warning dialog box that appears over the 'Schedule' section. The dialog box contains the following text: 'Scheduling: Job is in the past' and 'Job start time/date is in the past! Submission might trigger immediate execution. Shall the job still be submitted?'. The dialog has 'OK' and 'Cancel' buttons. In the background, the 'Start Conditions' section shows the job is set to 'Daily' with a 'Start Date' of 25.09.2020 and a 'Start Time' of 10:50:00. The 'Save' button is visible at the bottom right of the interface.

Data Consistency Management innovations

Integration Repository – SAP S/4HANA impact analysis

Description

You can now analyze the impact of an SAP S/4HANA transition on a set of selected interfaces from the Integration Repository. The analysis will provide the impact and recommended actions on interface level.

Details

- Analysis can be started based on a set of interfaces and the SAP S/4HANA target release
- The result consists of the coding object used by the interface, the type of impact and the recommended action to mitigate it

Benefits

- Enables you to analyze the impact of an S/4HANA transition on your integration landscape
- Learn about the impact on interface level, and understand the recommended actions
- Avoid complications with your integration landscape in your SAP S/4HANA transition

Interface Name	Interface Technology Name	Interface Subtype	Impact Analysis F

Focused Build SP8

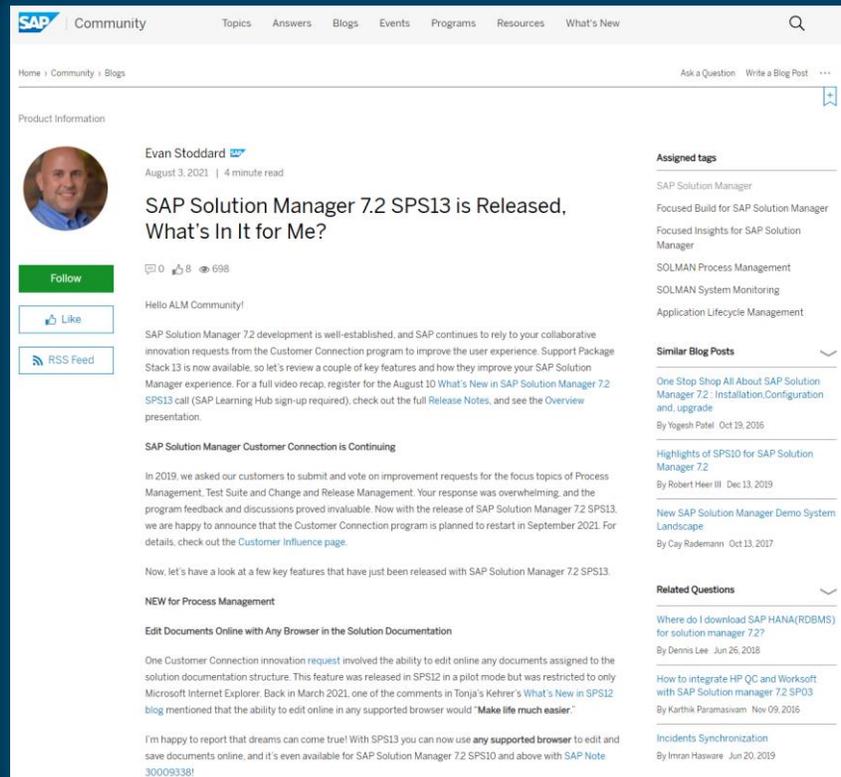

S/4HANA Conversion Project Support – Simplification Item Management

Key improvements:

- Activities with small efforts that are also related to each other can be merged into one Follow-Up Document.
- Created Requirements or Work Packages can be handed over from the Simplification Item Management application to the Mass Change Application for easier Release / Wave Backlog Planning
- Activities without a Follow-Up Document can be assigned to an already created one. If the assignment to or the creation of a Follow-Up document was done incorrectly a reassignment to a different Follow-Up Document can be done.
- Integration of custom transaction types in addition to Requirements and Work Packages

What's New in SPS13

Blog on SAP Community

The screenshot shows a SAP Community blog post. The author is Evan Stoddard, and the post is dated August 3, 2021, with a 4-minute read time. The title is "SAP Solution Manager 7.2 SPS13 is Released, What's In It for Me?". The post content includes a "Hello ALM Community!" greeting, a paragraph about SAP Solution Manager 7.2 development and the Customer Connection program, a section titled "SAP Solution Manager Customer Connection is Continuing", a "NEW for Process Management" section, and a section titled "Edit Documents Online with Any Browser in the Solution Documentation". The right sidebar contains "Assigned tags" (SAP Solution Manager, Focused Build for SAP Solution Manager, Focused Insights for SAP Solution Manager, SOLMAN Process Management, SOLMAN System Monitoring, Application Lifecycle Management), "Similar Blog Posts" (One Stop Shop All About SAP Solution Manager 7.2: Installation, Configuration and upgrade; Highlights of SPS10 for SAP Solution Manager 7.2; New SAP Solution Manager Demo System Landscape), and "Related Questions" (Where do I download SAP HANA (RDBMS) for solution manager 7.2?; How to integrate HP QC and Worksoft with SAP Solution Manager 7.2 SPO3; Incidents Synchronization).

Outlook

for SAP Solution Manager and Focused Build

With SAP Customer Connection, we continuously improve **SAP Solution Manager and Focused Build** based on customer feedback

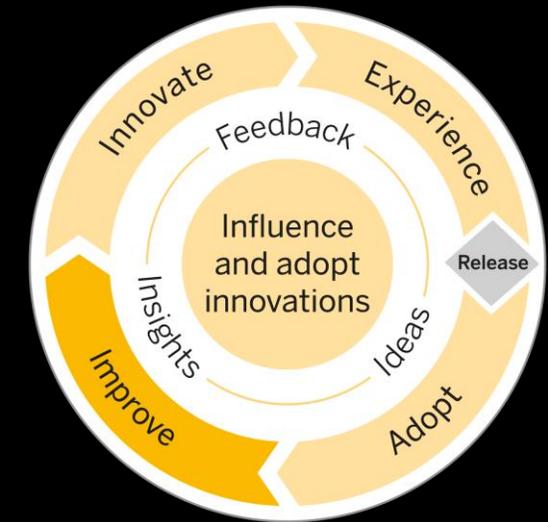

Our customers:

- Provide clear guidance to SAP for what areas require investment
- Share a precise list of requested improvements from the worldwide customer community (user groups)
- Prioritize the requests through voting
- Collaborate with SAP Solution Manager development to ensure proper delivery

How can customers participate?

- Follow the three new 2021 SAP Solution Manager projects
- Submit your requests
- Vote for requests (15 votes needed)
- Discuss requests with other customers and SAP
- No restriction on number of participants

What can you do today?

How to engage:

- **Log on** to the influence platform and review the new 2021 projects (see below)
- **Review** existing requests from previous projects
- **Listen** to past recordings
- **Follow** the 2021 projects to get updates automatically!

Kick-off: September 15th 2021

2021 projects are live now

- [Process Management 2021 for SAP Solution Manager, including Focused Build](#)
- [Test Suite 2021 for SAP Solution Manager, including Focused Build](#)
- [Change & Release Management 2021 for SAP Solution Manager, including Focused Build](#)

SAP Cloud ALM

Operating Cloud-Centric Solutions with SAP Cloud ALM

openSAP – Tue 14th September 2021

<https://open.sap.com/courses/calm3>

Learn how to Operate Cloud-Centric Solutions with SAP #CloudALM by registering with the latest #openSAP course

REGISTER – ENGAGE – ASSIGNMENTS – EXERCISE/PLAY - ACHIEVE

Product Owners and guest speakers lift the lid and you can explore with them the functionalities of #CloudALM

You will learn about the Monitoring & Alerting functionalities available in SAP Cloud ALM, i.e. **Business Process Monitoring**, **Integration & Exception Monitoring**, **Real User Monitoring**, **Job & Automation Monitoring**, and **Health Monitoring**. Furthermore, you get to know the Event Management functionalities like **Business Service Management** and the **Intelligent Event Processing** approach.

Duration: 3+1 weeks

Effort required: 3-4 hours per week

Week 1: Introduction

Week 2: Monitoring & Alerting

Week 3: Event Management

Week 4: Exam

(Demo system available each week to support learning experience)

OPEN FOR
REGISTRATION

Speakers: SAP Cloud ALM Product Owners and SAP Guest Speakers

Setup Video

The following video demonstrates the setup steps to set up Integration & Exception Monitoring for SAP S/4HANA and SAP Business Suite. A textual step by step description for all setup steps is provided in the sections below the videos.

Set Up Monitoring for SAP S/4HANA, SAP Business Suite or SAP Employee Central Payroll

- ✓ Prerequisites for this video:
 - ✓ Download SAP Cloud ALM service key
 - ✓ Ensure prerequisites for the ABAP system are met as described in the section "Prerequisites"

Setup Steps in SAP ABAP On-Premise System

Prerequisites

- ✓ Technical Prerequisites for the ABAP system
 - ✓ SAP_BASIS 7.40 SP20 or higher (accordingly 7.50 SP04)
 - ✓ Install ST-PI 7.40 SP14 or higher
 - ✓ Implement the latest version of SAP note 2985521-Collective corrections as of ST-PI 7.40 SP14 for Cloud ALM
 - ✓ Implement the latest version of SAP note 3054258 -Collective corrections as of ST-PI 7.40 SP15 for Cloud ALM
 - ✓ Check that profile parameter `icm/HTTPS/client_sn_enabled` is set to TRUE (see also note 510007 - Additional considerations for setting up SSL on Application Server ABAP)
