RSS Feed

We are excited to feature the SAP Community Spotlight this month and share why SAP Signavio enables and speeds up your continuous business process transformation.

In today's world, with rapid changes and market disruptions, companies must stay agile and transform fast. Not only to adapt their value chains and business operations but also to ensure excellent customer experience and remain relevant in the market. However, changing and adapting operations and processes quickly and at scale across the company can be challenging and time-consuming.

SAP Signavio

A cloud-based process transformation suite that gives companies the ability to understand, improve and transform all of their (end-to-end) business processes, fast and at scale (across SAP and non-SAP solutions)

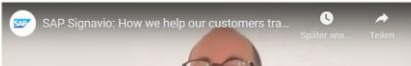

That's where SAP Signavio can support: as an end-to-end process management solution it gives you the ability to understand, enhance, and transform all your business processes – fast and at scale with the help of all of your business users.

SAP Signavio provides you with everything you need to succeed in continuous business process transformation:

- A complete suite to support process transformation from analytics to execution
- A transformation methodology centered around people and collaboration

And now: a collection of highly consumable value accelerators that will drive "time to value" throughout your transformation journey.

How SAP Signavio Can Help Transform Your Business

Synthetic User Monitoring in SAP Cloud ALM: how to configure an on-premise Selenium Runner

0

4

126

Follow

Liked

RSS Feed

Overview

When configuring a Synthetic User Monitoring (SUM) Selenium Runner, two types of configurations are possible: *Internet and On-Premise*.

With the *On-Premise* option, a dedicated, local web driver infrastructure must be setup to host the different Selenium components.

Once the on-premise Selenium infrastructure is in place, the related endpoints must be exposed to the SUM Runner configuration.

The goal of this blog is to describe the steps needed to expose the *On-Premise* endpoint to the Synthetic User Monitoring application in SAP Cloud ALM.

We won't go in details on how to install the Selenium infrastructure, there are several options well documented in the web and Selenium provides [samples docker images](#) containing the minimal required elements to start.

Prerequisites

Being an on-premise resource, the Selenium endpoint must be exposed to the (SAP Cloud ALM) SUM application using a Cloud Connector.

Below, the overall architecture.

Synthetic User Monitoring in SAP Cloud ALM How to Configure an On Premise Selenium Runner

Alignment of SAP Focused Build with SAP S/4HANA Projects

1

RSS Feed

Introduction

Based on the experiences from several SAP S/4HANA projects, I can definitely say that adapting SAP Focused Build to the SAP S/4HANA project methodology is an essential key to success.

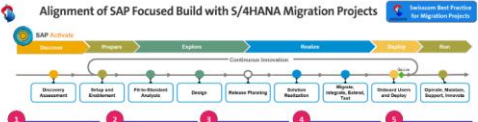

Regardless of whether the approach is greenfield, brownfield or selective data transition, with all these approaches it is nevertheless important to synchronize the topic of SAP ALM with the project right from the start and thus at an early stage.

«involve the people who are responsible in the project and make them participants.»

Depending on which ALM functionalities and how deep and integrated you want to use them in the project, you can choose either the SAP Solution Manager with Focused Build or SAP Cloud ALM. Of course, there are often many other supporting tools that can be used and integrated for planning and controlling a project. However, in this blog post I focus on the SAP-centric ALM tools. I show how these can be optimally coordinated with the project.

Adaptation of SAP Focused Build on SAP S/4HANA projects

As a first step, it is important that the program/project planning is aligned with, in this specific example, SAP Focused Build. At Swisscom, we have defined five steps to answer the essential questions for an effective alignment. The goal of these five steps is to ensure that the Focused Build Requirements to Deploy process is properly dovetailed with project planning and project control.

Alignment of SAP Focused Build with SAP S/4HANA Projects

News from SAP Product Support

SAP Security Note [3089413](#) - [CVE-2023-0014] Capture-replay vulnerability in SAP NetWeaver AS for ABAP and ABAP Platform **Hot News**

Symptom: “SAP NetWeaver ABAP Server and ABAP Platform creates information about system identity in an ambiguous format. This may be exploited by malicious users to obtain illegitimate access to the system.”

How is this affecting to SAP Solution Manager?

In case of your SAP Solution Manager system connects with managed systems with the same SID you should consider the implementation of this SAP Security note as by this correction the system identification becomes unique (SID + installation number) and the system identification will be used and evaluated correctly in trusted-trusting communication scenarios.

SAP Security Note [3089413](#) - [CVE-2023-0014] Capture-replay vulnerability in SAP NetWeaver AS for ABAP and ABAP Platform **Hot News**

Procedure – In both: the calling SAP Solution Manager and the called systems Managed systems

1. Update Kernel in all systems - specific Patch Levels for each Kernel
2. Update BASIS in all systems to the highest Support Package or implement the Correction Instructions (for BASIS) mentioned in this SAP Note [3224161](#)
3. Migrate destinations that use trusted/trusting relationships according to SAP Note [3157268](#) - How-To-Guide: Migration of Trusted/Trusting Relationships
 - This step adds information in the destinations about the system ID (necessary) and the installation number (recommended if a system is connected to several systems with the same system ID)
4. Run the migration report RS_MIGRATE_TO_NEW_EXT_TICKET in the SAP Solution Manager systems according to SAP Note [3284618](#)
5. Set profile parameter rfc/allowoldticket4tt in all systems to block connections that were not updated via step 3 and 4

Specific SAP Notes for SAP Solution Manager scenarios

These SAP Notes need to be implemented in the SAP Solution Manager and in the managed systems too (in the development system only for the retrofit note)

- SAP Note [3283990](#) - Trusted RFC creation in SOLMAN_SETUP after implementing security note 3089413
Symptom
You want to adopt the correction in note 3089413 while you create new trusted RFCs in transaction SOLMAN_SETUP > Managed System Configuration > step 3 "Maintain RFCs".
- SAP Note [3203082](#) - Improve TRUSTED RFC generation in the Retrofit process
Symptom
You are using the Retrofit function in Change Control Management to control your software distribution.
The process of automatic TRUSTED RFC generation for the initial execution in the correction workbench (SCWB) or the BC sets has been improved.

Additional Information

- **Wiki page** [Note 3089413 - Capture-replay vulnerability in SAP NetWeaver AS for ABAP and ABAP Platform](#)
- FAQ Note [3281854](#) - FAQ for Security Note 3089413
- Consulting Note [3224161](#) - Prerequisites for Note 3089413
The note describes the minimum Kernel Patch Levels and minimum SAP BASIS Releases to implement the solution
- Consulting Note [3157268](#) - How-To-Guide: Migration of Trusted/Trusting Relationships

What's new in SAP Solution Manager 7.2 – SPS 16

Process Management

SPS 16 delta features

Process Management innovations

Automated translation of Documents

Description

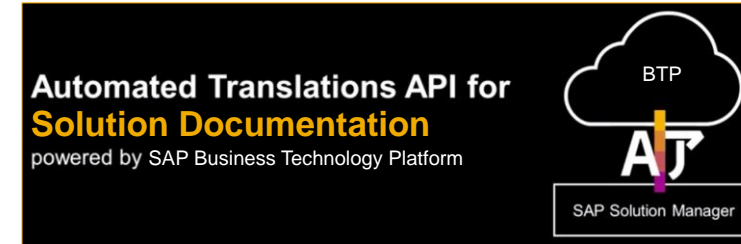

- Document Translation via SAP Machine Learning Translation Services powered by SAP Business Technology Platform.
- Requests [272427](#) and [272426](#).

Details

- You can trigger an automatic translation process using the SAP translation service directly in the context menu of a document.
- Use the Re-Translate function to apply the changes when you edit the original document again.
- If you have already manually translated your documents, you can group the documents and define the original and translated documents.
- Only documents in the selected language are shown.
- Check all [available languages for translation](#).

Benefits

- No longer any need to translate document per language manually

The screenshot shows the SAP Solution Documentation interface. The top navigation bar includes 'SAP', 'Solution Documentation', and tabs for 'Browser', 'List', 'Search Result', 'Where-Used List', and 'Reporting'. The main content area displays a list of documents under the 'Corporate Solution - Maintenance' section. A table titled 'Elements of E2E_OTC_Sale-from-Stock Internet Sales' is visible, listing various documents and their properties.

Name	Language	Type	Document Type	Logical Compon...	Group	Path
BF1 (XX) - Financial Master Data (Manufacturing)		Building Block <Ref.>		S4H	Configuration	/Solution/Business
J74 (US) - Bank Account Management - Core [local]		Building Block <Ref.>		S4H	Configuration	/Solution/Business
JA2 (US) - Sample Master Data Business Partners [local]		Building Block <Ref.>		S4H	Configuration	/Solution/Business
E2E_OTC_Sale-from-Stock Internet Sales (simplified)		Process Diagram			Diagrams	/Solution/Business
E2E_OTC_Sale-from-Stock Internet Sales (realistic)		Process Diagram			Diagrams	/Solution/Business
BD9 - Sales Order Processing: Sale from Stock		Document (Best Pra...			Documentation	/Solution/Business

E2E_OTC_TD_Sale-from-Stock Internet Sales	English (E)	Test Document	Functional Interface Specification (OFISP)		Test Cases	/Solution/Business

Process Management innovations

Ability to mass move elements of different types

Description

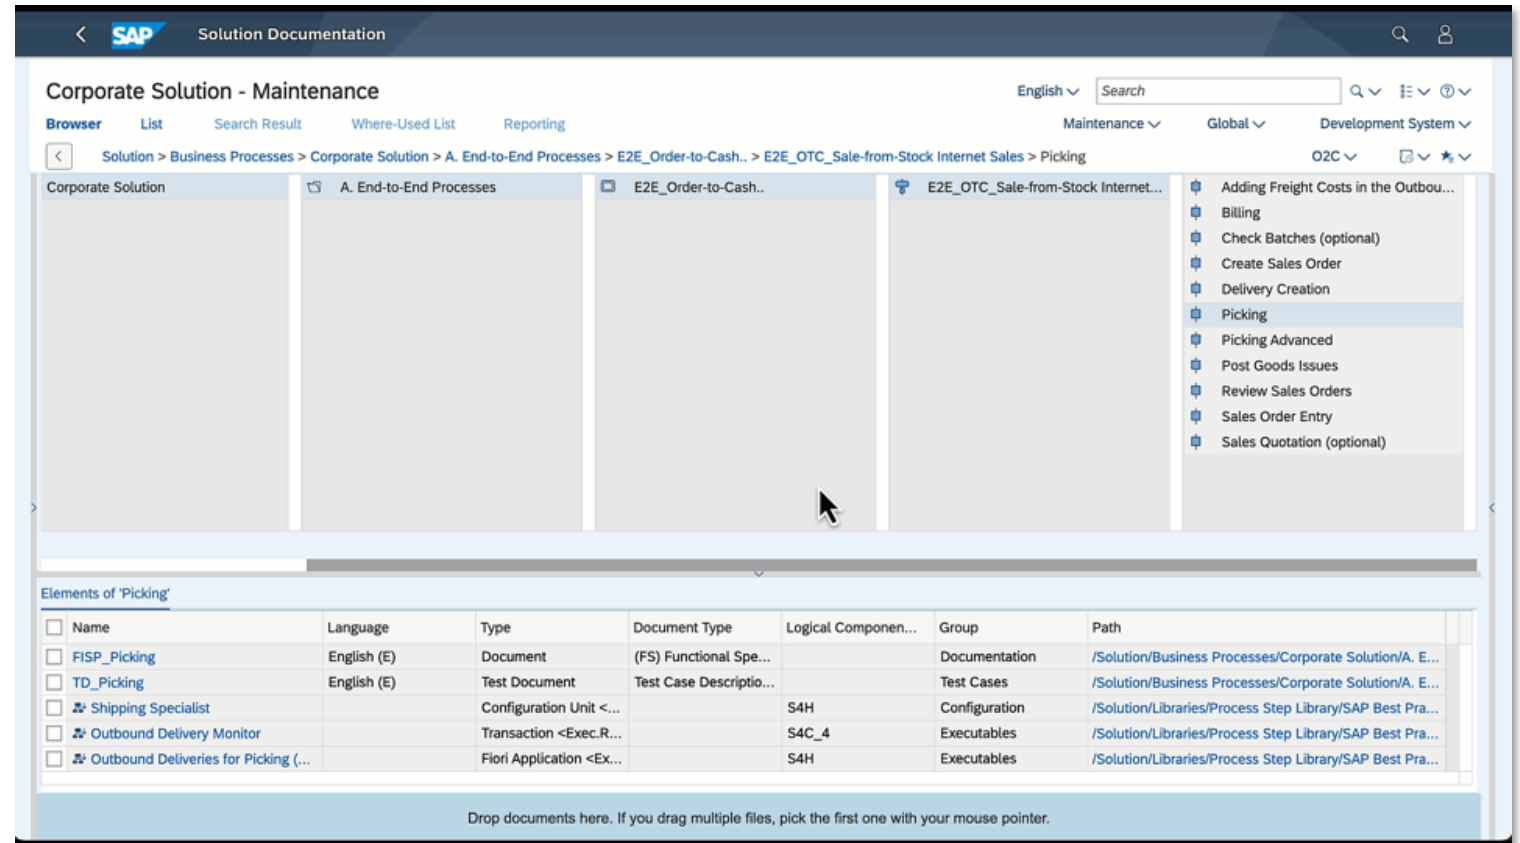

- You can now move several elements of different types.
- Requests [272696](#).

Details

- You can now move several elements of different types (e.g. documents, test cases, executables and configuration units).
- The operation is only allowed to move elements for the same structure types (e.g. from Process A to Process B or from Process Step to Process Step).

Benefits

- Time savings
- Better usability

Process Management innovations

Automatic transfer of process step names to all process step references

Description

- When changing the name of a process step in the process step library, this name can be adopted in all process step names.
- Request [272835](#).

Details

- New context menu available to distribute the process step names from the original to their references.
- Get an overview of all process steps to compare and adjust all names.

Benefits

- Unified use of process steps
- No adjustment effort (via where-used-list)

The screenshot displays the SAP Solution Manager 7.2 interface for 'Corporate Solution - Maintenance'. The breadcrumb trail indicates the path: 'Solution > Business Processes > Corporate Solution > A. End-to-End Processes > E2E_Order-to-Cash.. > E2E_OTC_Sale-from-Stock Internet Sales'. The main area shows a list of process steps, with 'E2E_OTC_Sale-from-Stock Internet Sales' selected. A context menu is open over this step, listing various actions. The right sidebar provides details for the selected process step, including its name, description, type, and node information.

Name	Status	Document Type	Created At	Type	Created By

MAD (XX) - SAP S4HANA Fiori Transactional Apps Deployment				Building Block <Ref.>	
BM5 (XX) - Central Configuration for Trading Goods (HAWA)				Building Block <Ref.>	
BD5 (US) - Sales and Distribution - Sale from Stock [local]				Building Block <Ref.>	
MAA (XX) - SAP S4HANA Fiori Foundation Configuration				Building Block <Ref.>	
MAG (XX) - SAP S4HANA Fiori Launchpad Operation				Building Block <Ref.>	

Test Suite

SPS 16 delta features

Test Suite innovations

Copying test plans: change solution documentation attributes

Description

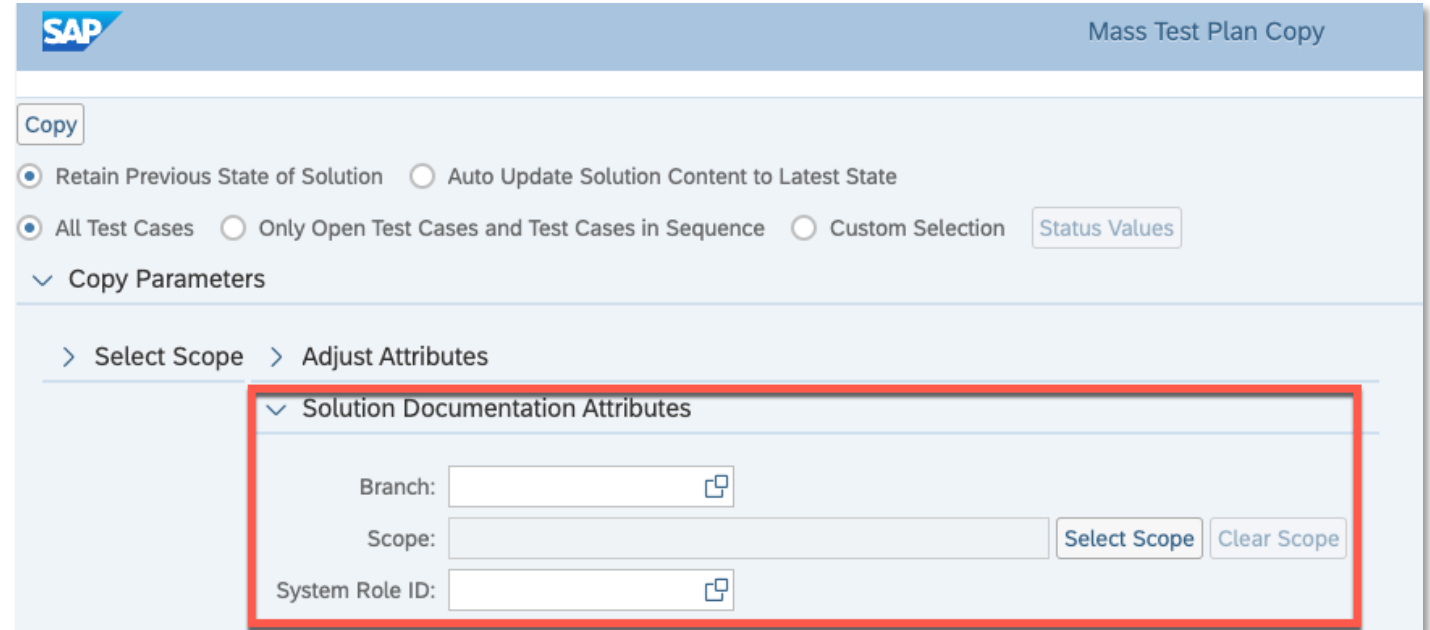

- In the test plan copy, you can now make changes to the Solution Documentation attributes for the target test plans.
- Requests [272939](#) and [272473](#).

Details

- You can specify parameters such as the target branch, the scope, the site, and the system role for the target test plans.
- As source and target test plans do not refer to the same test cases hierarchy anymore, target hierarchy will be generated (or updated) when at least one node of the source test plan cannot be retrieved.
- The copy can be a partial copy, in case some test cases from the source test plan are not available in the target hierarchy. Test sequences and test packages referring to it will only be created if all nodes can be retrieved in the target test plan.

Benefits

- Less manual effort in test preparation / time savings

The screenshot shows the 'Mass Test Plan Copy' interface in SAP. The 'Copy' button is visible. Below it, there are radio buttons for 'Retain Previous State of Solution' (selected) and 'Auto Update Solution Content to Latest State'. There are also radio buttons for 'All Test Cases' (selected), 'Only Open Test Cases and Test Cases in Sequence', and 'Custom Selection'. A 'Status Values' button is next to the 'Custom Selection' option. Below these is a 'Copy Parameters' section with a dropdown menu. The dropdown menu is open, showing 'Select Scope' and 'Adjust Attributes'. The 'Adjust Attributes' option is selected, and the 'Solution Documentation Attributes' section is highlighted with a red box. This section contains three input fields: 'Branch:', 'Scope:', and 'System Role ID:'. The 'Branch:' and 'System Role ID:' fields have a small square icon next to them. The 'Scope:' field has a 'Select Scope' button and a 'Clear Scope' button next to it.

Test Suite innovations

Copying test plans: propagate change of responsible person to target test plans

Description

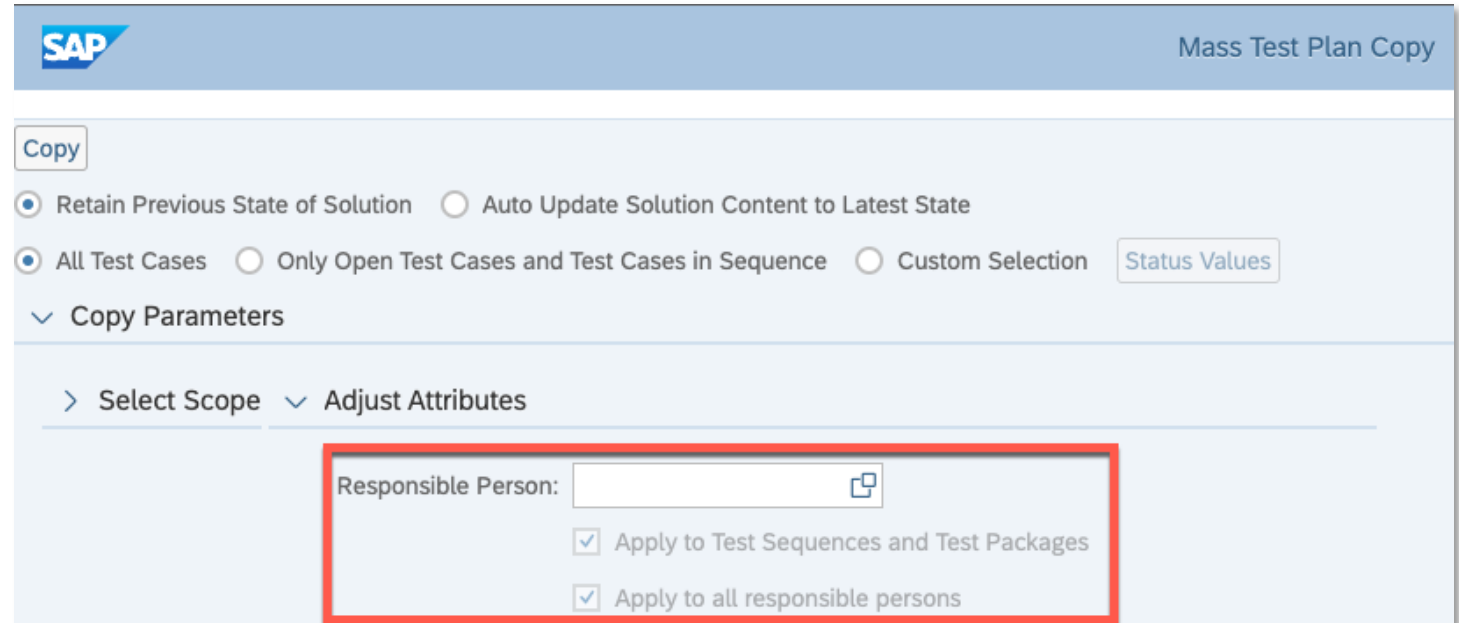

- When you copy a test plan, the person responsible for the test plan can also be set as responsible for the test sequences and test packages.

Details

- If a responsible person is specified to be used for the target test plan, it is possible to use the same person also on test sequences and test packages, either for all of them, or only for those where the responsible person was the same as on test plan level.

Benefits

- Less manual effort in test preparation
- Time savings

The screenshot shows the 'Mass Test Plan Copy' dialog in SAP. The 'Copy' button is visible. Below it, there are two radio buttons: 'Retain Previous State of Solution' (selected) and 'Auto Update Solution Content to Latest State'. There are also three radio buttons for selection: 'All Test Cases' (selected), 'Only Open Test Cases and Test Cases in Sequence', and 'Custom Selection'. A 'Status Values' button is next to the 'Custom Selection' radio button. Below these is a 'Copy Parameters' section with two tabs: 'Select Scope' and 'Adjust Attributes'. The 'Adjust Attributes' tab is active, showing a 'Responsible Person' field with a dropdown arrow. Below this field are two checked checkboxes: 'Apply to Test Sequences and Test Packages' and 'Apply to all responsible persons'. The entire 'Adjust Attributes' section is highlighted with a red border.

Test Suite innovations

Analytics: Test Plan Preparation Completeness report

Description

- The Test Plan Preparation Completeness report has an additional column that shows the state of tester assignments.

Details

- This includes the following statuses:
 - Locked:* The tester does not see the test package in his worklist.
 - Released:* The tester sees the test package in his worklist.
 - Partially locked:* For test packages with more than one assigned tester.

SAP Test Plan Preparation Completeness						
<div> <div>> Search</div> <div> <div>Test Plan Preparation Completeness</div> <div> <div>Standard</div> <div> <div>🔍</div> <div>📄</div> </div> </div> </div> </div>						
<input type="checkbox"/> Test Plan ID		Test Plan Attachments	Test Package ID	Test Package Description	Test Cases Without Tester	Test Package Attachments

<input type="checkbox"/>			TP_INT2	TP_Int2	1	0
<input type="checkbox"/>			TP_INT3	TP_Int3	0	0

Benefits

- Better transparency for test managers

Test Suite innovations

Third-party integration: start external tool execution from SAP Solution Manager

Description

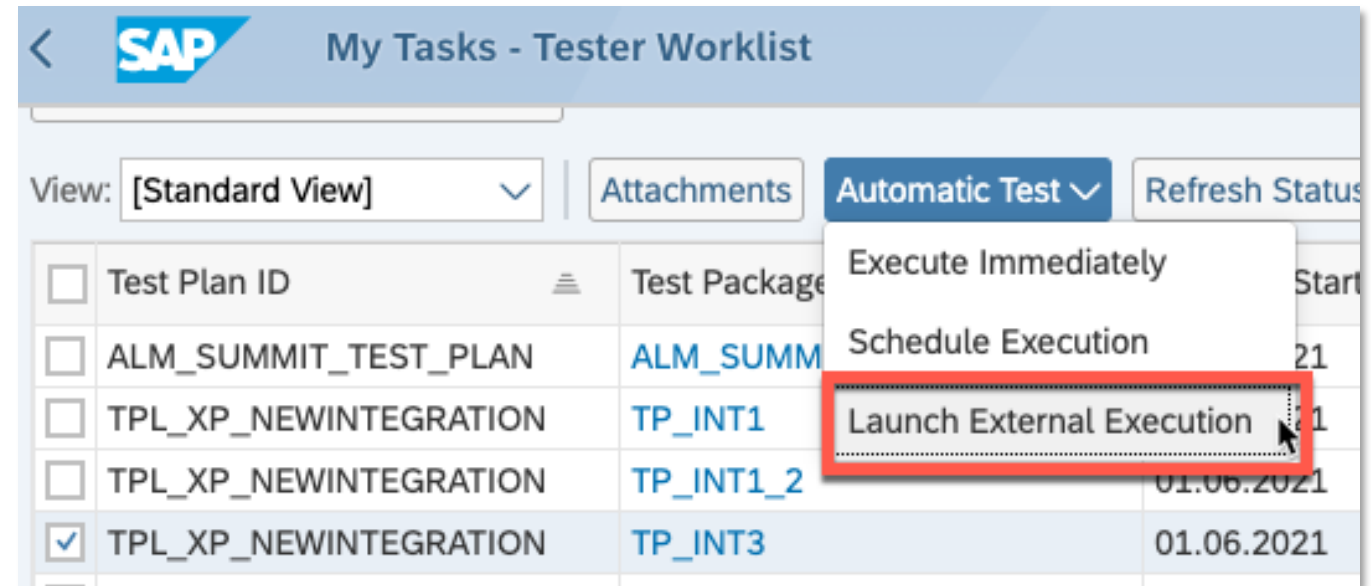

- Trigger test package execution from SAP Solution Manager to external test automation tool.

Details

- When a test package is synchronized with an external tool, you can execute the test package directly from the Tester Worklist app. The external tool executes the tests and sends the results back to SAP Solution Manager.
- This new function is available if supported by the automation tool.

Benefits

- Better integration capability.
- Test execution centralized on SAP Solution Manager.

Test Suite innovations

Dual signature in Test Suite documents

Description

- Dual signature concept is now available for Test Suite documents.

Details

- Available for **Test Plan Attachments, Test Package Attachments, Test Notes and Test Results.**
- According to the document status schema, an authorized user will be able to start a signature process for a document which is currently locked by its status, if there is a signature strategy available for one of the next allowed statuses.
- With dual signature, the signature strategy is independent from the initial status change and can be triggered by another user.

Benefits

- Improved compliancy for regulated customers

Test Suite innovations

CBTA configuration: official browser extension

Description

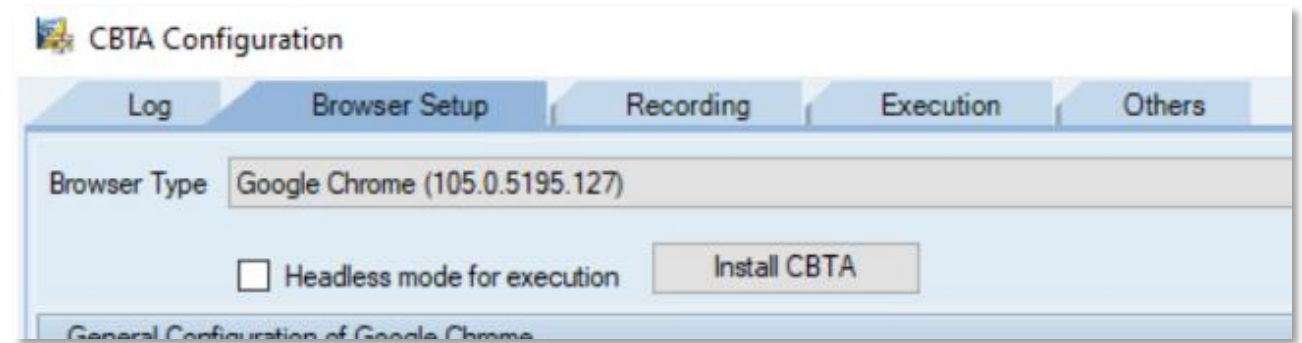

- An official CBTA browser extension is now available for specific browsers.

Details

- To use the extension with the CBTA Configuration tool, it can be downloaded from the cloud.
- You can retrieve the download URL on the CBTA client application under CBTA Configuration → Browser Setup.

Benefits

- Solves security policy issues
- Less maintenance effort

Change Control Management

SPS 16 delta features

Change Control Management Innovations – cTMS*

New navigation directly from the Landscape Assignment block

Description

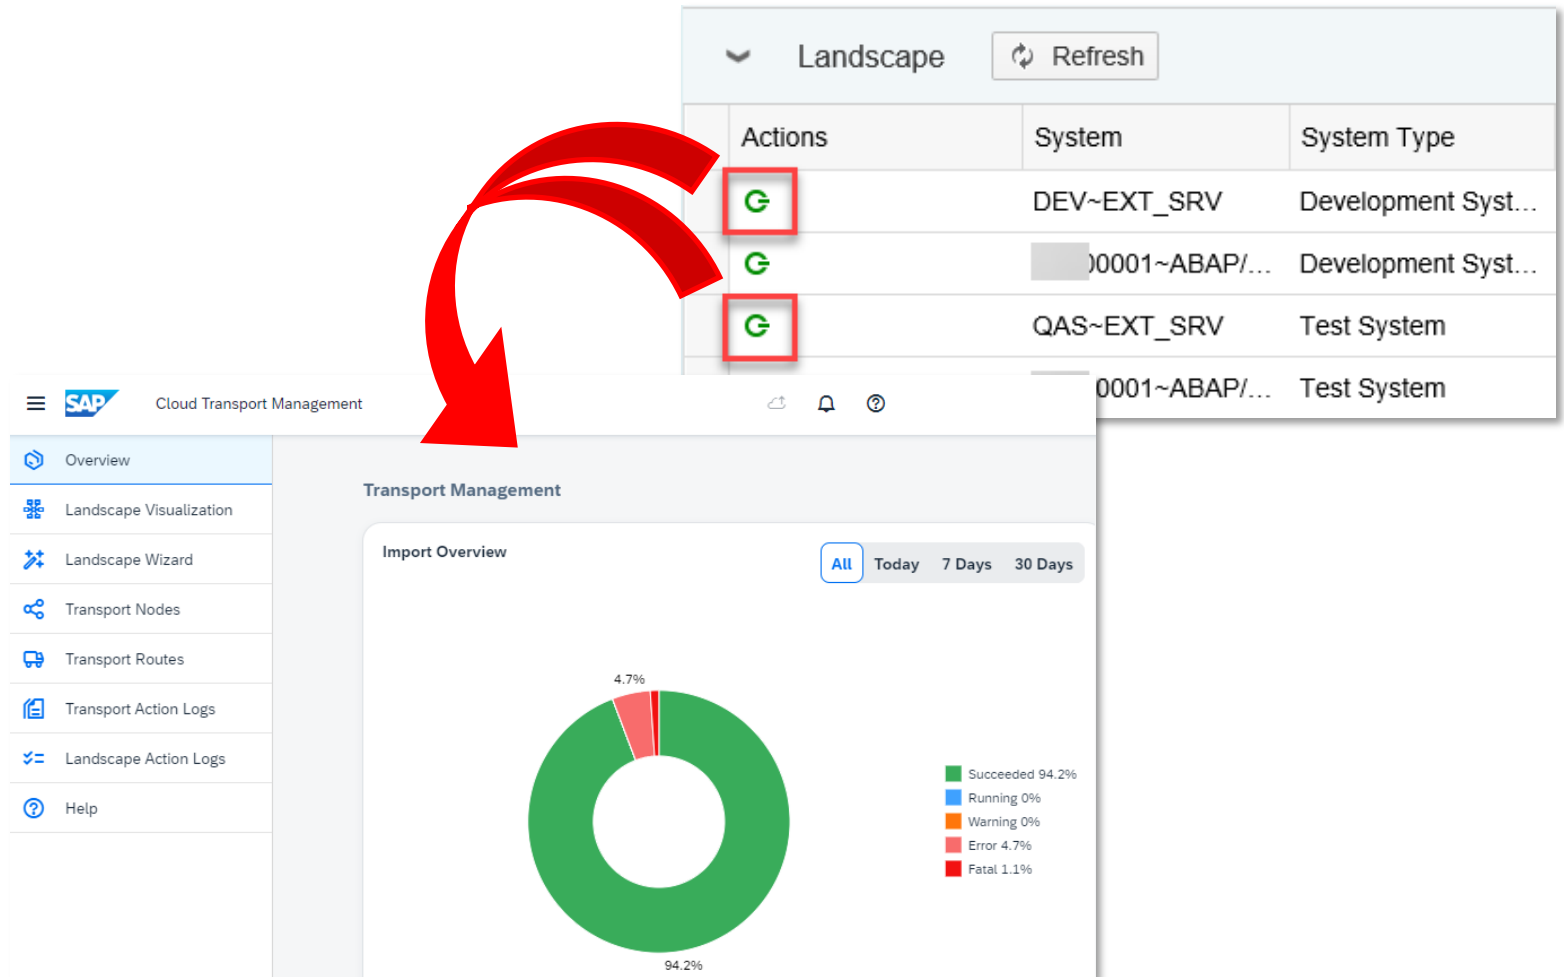

- You can now navigate to the SAP cTMS directly from the Landscape Assignment Block.

Details

- Directly logon to the SAP Cloud:
 - Transport Management
 - Landscape visualization
 - Transport Nodes
 - Transport Routes
 - Import Logs

Benefits

- Better integration
- Improved usability

Change Control Management Innovations – gCTS*

Support for different Git-based repositories

Description

- Change Request Management now supports the Git-enabled Change process with different Git-based repositories.

Details

- Up to now, only GitHub was supported.
- From now on various Git-based repositories can be used.

Benefits

- Better integration
- Improved flexibility

Change Control Management Innovations

Improved integration between Change Request Management and Test Suite

Description

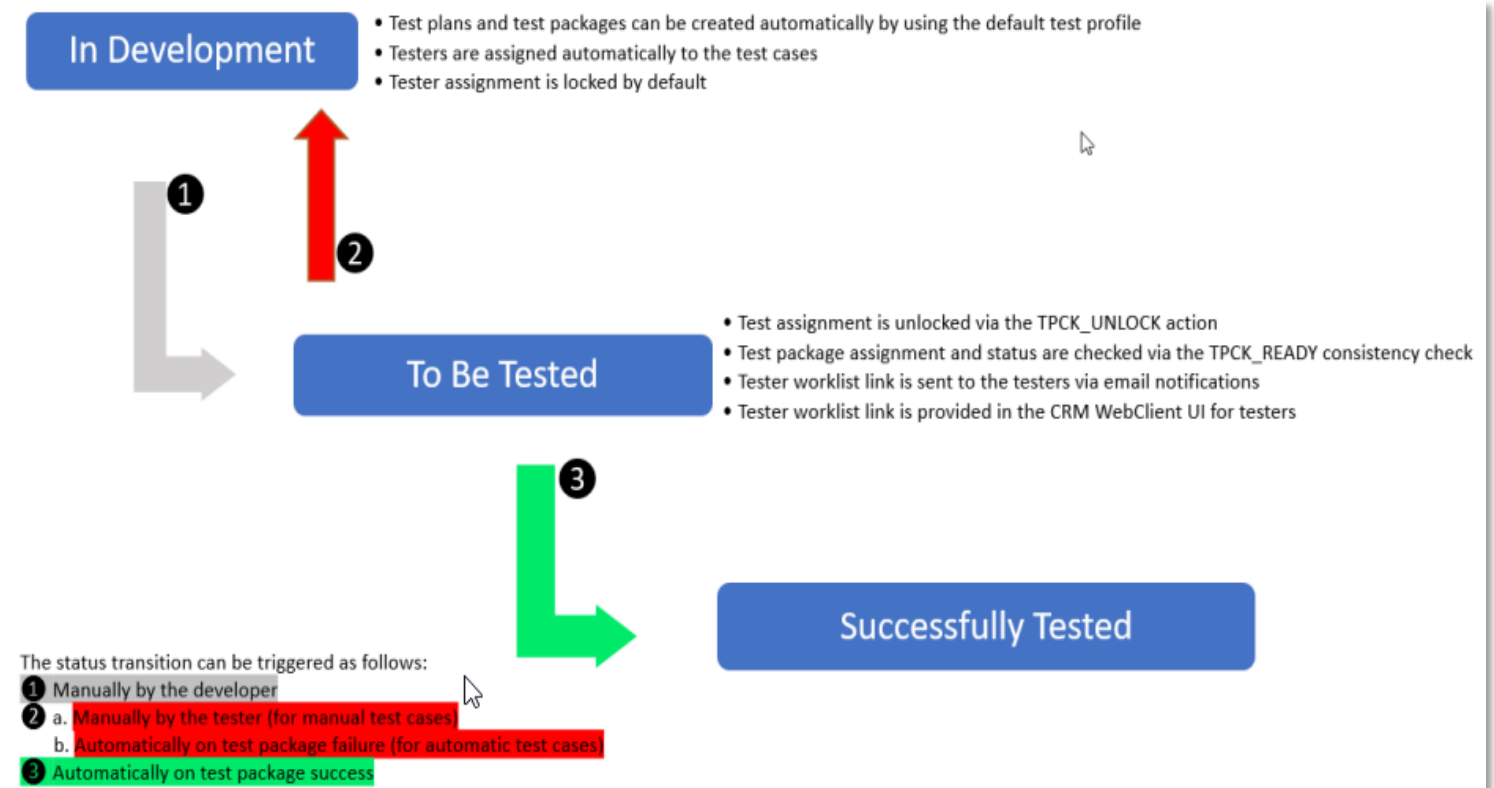

- The integration between Change Request Management and Test Suite is improved.

Details

- Test Plan creation is replaced by Test Plan and Test Package creation.
- Direct link to the Tester Worklist.
- Email notifications include the Tester Worklist link.
- Improved BAdI to support test results coming from test automation tools.

Benefits

- Better integration, improved usability
- Less manual effort, maximum automation

Change Control Management Innovations

Automatic save after scheduling a PPF Action for change requests / documents

Description

- No need to save manually after scheduling a PPF action for a change request or change document.

Details

- Must be activated in customizing per Transaction Type.
- Applies to all actions from the action menu for which the processing time is set to **“Processing When Saving Document”**.

Benefits

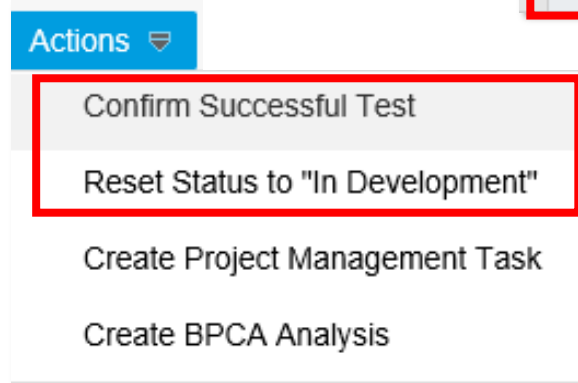

- Less manual effort
- Higher automation
- Improved usability

Focused Build For SAP Solution Manager

SP11 delta features

New with Focused Build SP11 – key innovations

Improved Documentation Management

- Better handling of documentation in Request for Changes and Change Documents
- Support of process variants
- Create or assign technical objects

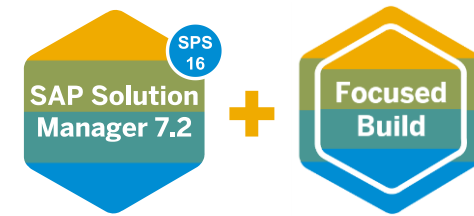

Usability improvements

- Business Partner Search window enhanced with e-mail address
- Mass Change Popup support custom fields in Requirements
- Specify the display order of custom fields for Requirements

Transport Management Enhancements

- Assign/Decouple of transport requests in UI5-applications
- Display ATC and Code Inspector checks in UI5-applications
- Reset Defect Corrections status in case of import error 8 or higher

New with Focused Build SP11 – Enhance Pace

Description

- New Enhance Pace for performing maintenance changes.

Details

- The Enhance Pace allows a combination of bugfixes, uncritical standard changes and regular changes in one change cycle. It enables customers to run smaller implementation projects on the maintenance landscape with performing updates to the process documentation on the maintenance branch.
- Valid for **My Requests for Change, My Requests for Change for Approvals, My Change Documents**

Benefits

- Customers who run a dual-phased landscape can continue using well-known UI5-applications to perform the ongoing maintenance and also smaller packages of normal changes in the maintenance landscape. Updates to the process documentation are performed on the related maintenance branch. **Also, synchronization between maintenance and project track via Retrofit is now possible.**
- Customers who have a single-track landscape can also use the Enhance Pace. After the Go-Live of the implementation project (and potential use of Fix Pace during Hypercare-phase) the continual enhancement can be done with Enhance Pace.

Focused Insights For SAP Solution Manager

SP11 delta features

New with Focused Insights SP11 - Language availability

Same language scope as SAP Solution Manager

Details

- Focused Insights is now available with the **same language scope** as SAP Solution Manager (also true for Focused Build)

Benefits

- Customers can use Focused Insights / Focused Build with the same language as other SAP Solution Manager functionalities.

The screenshot shows the 'SAP Product Availability Matrix' interface. The main window is titled 'FOCUSED BUILD AND INSIGHTS 2.0'. It has tabs for 'General Information', 'Technical Release Information', 'SAP Software Download Center', and 'System Data'. The 'Technical Release Information' tab is active, and the 'Languages' sub-tab is selected. On the left, there are filters for 'Product Instance' (set to 'Application Server ABAP') and 'No Other Filters Available'. The main table displays 19 entries for 'Application Server ABAP (ABAP)'. The table has columns for 'Language', 'Scope', 'Status', 'Valid from', and 'Additional Information'. Each language entry has a green status icon and a 'Valid from' date.

Language	Scope	Status	Valid from	Additional Information

Check the [SAP Product Availability Matrix](#) for details

New with Focused Insights SP11 - Tactical Dashboard

Operations Control Center queries with micro chart display

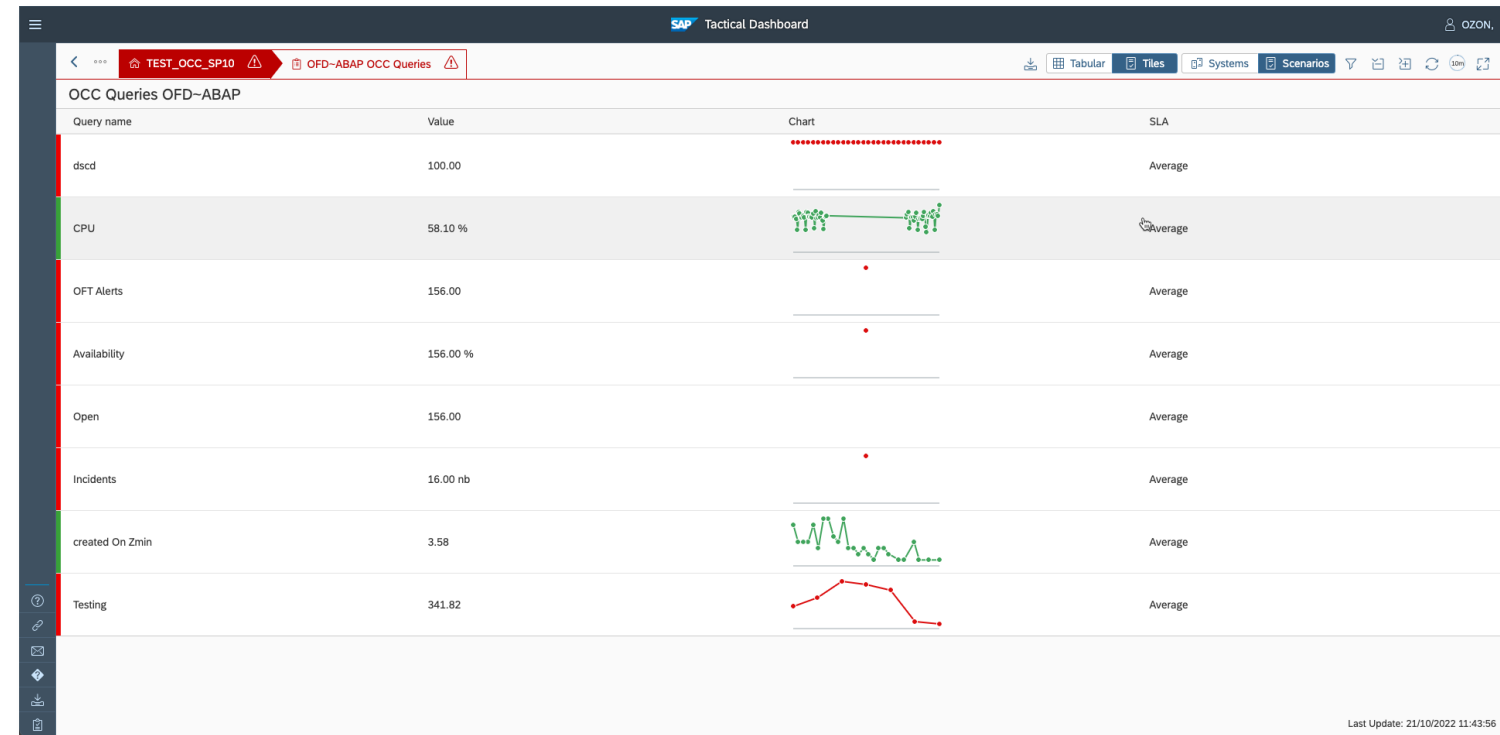

Details

- The overview of the OCC queries now integrates a **preview** of the value based on the timeline defined in the setup.

Benefits

- Improved usability and user experience

The next SAP Community Call for ALM will take place on

March 15, 4pm CET / 10am EST.

The focus topic of this call will be **Transition to SAP Cloud ALM**. We will share information about the overall maintenance strategy and provide insights into the new SAP Readiness Check for SAP Cloud ALM.

Reminder: **Re-Register yourself** [here](#) to receive e-mail invites for future calls!

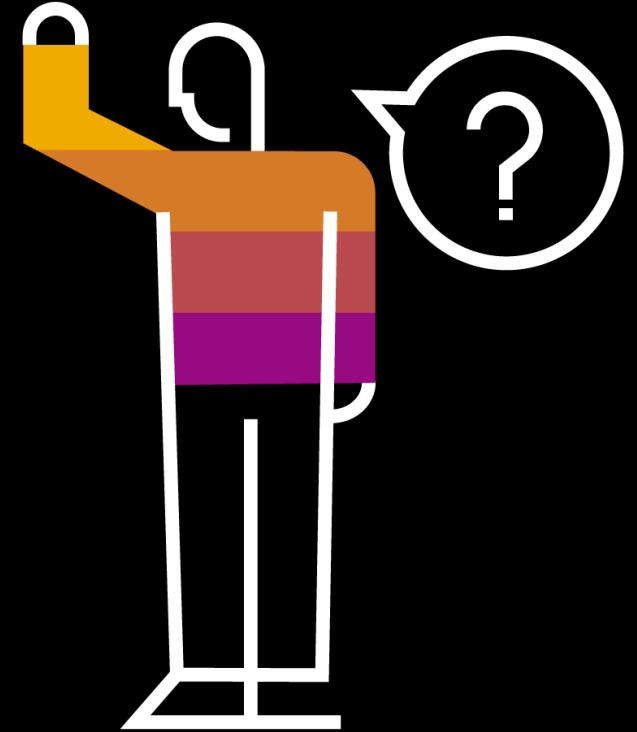

Q&A

Ask you questions here!

Please ask your questions!

Use the Q&A panel in the Zoom webinar to ask your questions.

Thank you.
