Readers are cautioned not to place undue reliance on these forward-looking statements, which speak only as of their dates, and they should not be relied upon in making purchasing decisions.
Preliminary Remarks

- **This session will NOT be recorded.**
  Security is a sensitive topic! At the same time, this is a workshop and we are very interested in an open and interactive exchange and discussion. Thus, we decided not to record this session to lower the barrier for open communication.

- **Special S-User authorizations is required to view the EarlyWatch Alert Security Card**
  - In detail, you need the following authorizations:
    - The already existing authorization **Service Reports and Feedback** (section Reports) to view SAP EarlyWatch Alert reports and apps.
    - The new authorization **Display Security Alerts in SAP EarlyWatch Alert Workspace** (section Reports) to use the alert category Security in the application SAP EarlyWatch Alert Solution Finder and to access the card Security Status.
  - To verify whether you have access, open the EWA Workspace and check whether you can see the “Security Status” card. ([https://launchpad.support.sap.com/#/ewaworkspace](https://launchpad.support.sap.com/#/ewaworkspace))
  - If you don’t see it, ask your S-User Super Admin to grant the above authorizations to you.

SAP EarlyWatch Alert Workspace
Get empowered to speak the same language across teams

- One common view for all users
- Built for simplicity with Design Thinking
- One database with 3+ years history of data
- One service engine using rules, predictions, and Machine Learning
- Transparency at all times for business continuity

Work with proven standards at any place and under all conditions.

Key Collaboration Views and Benefits
Powered by SAP EarlyWatch Alert Workspace

**Landscape summary**
- Find top risks for business continuity
- Easily identify top improvement actions
  - Fiori Overview Page

**Predictive alerts**
- Timely forecasts of critical situations
- Avoid business downtimes well in advance
  - Powered by SAP HANA Predictive Analytics Library (PAL)

**Alert list per landscape**
- Aggregated and prioritized alert view
- Get best practices for mitigation
  - Powered by SAP HANA Text Search

**Security risks per landscape**
- Get secure and stay secure
- Hardening of security settings
- Perform easy security scans
  - Fiori Overview Page

**Dashboard per system**
- Identify serious bottlenecks
- Find critical trends in KPIs
  - Embedded Analytics via CDS views

**Active collaboration at all times**
- Get informed about alerts
- Get embedded support
- Searchability
  - Powered by Conversational AI

How many systems are vulnerable or even “RED”

- Standard users including SAP* or DDIC have default passwords
- HANA user SYSTEM is active and valid
- RFC Gateway and Message Server security – Doors wide open
- HANA Internal or System Replication Communication is not secured
- Weak Password Policy
- HANA: SQL Trace configured to display actual data
- Systems having outdated Software no longer supported with SAP Security Notes
- Users having critical basis authorizations like SAP_ALL, Debug/Replace, Change all tables,…
- HANA users having critical authorizations like DATA ADMIN privilege
- Audit Log is not active or written to an unsecure audit trail target

Available at https://launchpad.support.sap.com/#/ewaworkspace
Security Alerts in the SAP EarlyWatch Alert Solution Finder
Security Alerts in the SAP EarlyWatch Alert Solution Finder

Most Critical Alerts – Default Passwords of Standard Users

- Default Passwords of Standard Users (Security → ABAP Stack)
  - Standard users including SAP* or DDIC have default password.
  - Standard users have default password.  
    (i.e. neither SAP* nor DDIC)

Standard users, including SAP* and DDIC, have default passwords.

Run report RSUSR003 to check the usage of default passwords by standard users. Ensure that:
  - User SAP* exists in all clients
  - Users SAP*, DDIC , SAPCPIC , and EARLYWATCH have non-default passwords in all clients
  - Profile parameter login/no_automatic_user_sapstar is set to 1.

For more information, see "Protecting Standard Users" and "Profile Parameters for Logon and Password (Login Parameters)" either on SAP Help Portal or in the SAP NetWeaver AS ABAP Security Guide.

Make sure that the standard password for user TMSADM has been changed. SAP Note 1414256 describes a support tool to change the password of user TMSADM in all systems of the transport domain. SAP Note 1552894 shows how to update the report RSUSR003 to show the status of user TMSADM.
Security Alerts in the SAP EarlyWatch Alert Solution Finder

Most Critical Alerts – RFC Gateway Security

- RFC Gateway Security (Security → ABAP Stack → RFC Gateway and Message Server Security)
  - Gateway Access Control List (reg_info/sec_info) contains trivial entries / does not exist
    - “sec_info” affected
    - “reg_info” affected
  - The profile parameters gw/sec_info and gw/reg_info provide the file names of the corresponding access control lists. These access control lists are critical to controlling RFC access to your system, including connections to RFC servers. You should create and maintain both access control lists, which you can do using transaction SMGW.
  - The files secinfo and reginfo, which are referenced by these profile parameters, should exist and should not contain trivial entries.
  - The profile parameter gw/sim_mode should be set to 0 to disable the simulation mode which would accept any connections.
  - Enable the missing property by adding the bitmask value to the current value of profile parameter gw/reg_no_conn_info. For more information about profile parameter gw/reg_no_conn_info, see SAP Note 1444282.
  - The profile parameter gw/acl_mode should be set to 1 to enable secure default rules if any of these files do not exist.

SAP recommends defining and properly maintaining these access control lists to prevent rogue servers from accessing the system. For more information, see the following SAP Notes:

SAP Note [1305851] - Overview note: "reg_info" and "sec_info" / SAP Note [1408081] - Basic settings for reg_info and sec_info

Security Alerts in the SAP EarlyWatch Alert Solution Finder
Most Critical Alerts – Security Maintenance Status

▪ Age of Support Packages (Security → ABAP Stack)
  – SAP Software on this system is outdated. Support with SAP Security Notes is no longer ensured.

▪ Maintenance Status of current SAP HANA Database Revision (Security → SAP HANA Database)

  □ overdue
  □ due within the next 6 months
Security Alerts in the SAP EarlyWatch Alert Solution Finder

Most Critical Alerts – Security Maintenance – Guidance by SAP

Official recommendation by SAP as given on the SAP Support Portal

“Most customers perform a planned maintenance for each productively used SAP application between once and four times a year ...

It is difficult to set up a general rule for defining the optimal time and frequency of a planned maintenance. You must decide what is best under the given circumstances. However, we recommend a planned maintenance at least once, better twice to four times a year. ...

We assume that during the proactive planned maintenance the latest available support package stacks (SP stacks) are implemented and that the SP stacks used are not older than one year. ...”

https://support.sap.com/securitynotes:

“Starting June 11, 2019, for all new SAP Security Notes with high or very high priority we deliver fix for Support Packages shipped within the last 24 months* ...

*See the following areas with an exception from the 24 months (starting June 11, 2019) with their general maintenance strategy

- Maintenance Strategy for SAP BW/4 HANA: see SAP Note 2347382
- Maintenance Strategy for SAP Analytics BI Suite: see SAP Note 2771848
- Maintenance Strategy for SAP GUI for Windows and SAP GUI for Java: see SAP Note 147519
- Maintenance Strategy for SAP Kernel: see SAP Note 787302
- Maintenance Strategy for SAP HANA: see documents for HANA1 and HANA2 or SAP Notes 2021789 and 2378962
- Maintenance Strategy for SAP Business Client for Desktop: see SAP Note 2302074”

SAP HANA Configuration-Related Alerts

- **SAP HANA Network Settings for Internal Services (Security → SAP HANA Database)**
  - SAP HANA Internal Network Configuration is insecure. 🔴
  - SAP HANA Internal Network Configuration may lead to future security risks. 🔴

- **SAP HANA Network Settings for System Replication Communication (listeninterface) (Security → SAP HANA Database)**
  - SAP HANA network settings for System Replication is insecure. 🔴
  - SAP HANA network settings for System Replication may lead to future security risks. 🔴

- **SAP HANA Audit Trail (Security → SAP HANA Database)**
  - SAP HANA database: Recommended Audit configuration is not applied. 🔴

- **SAP HANA SQL Trace Level (Security → SAP HANA Database)**
  - SAP HANA database: SQL Trace is configured to write all result sets. 🔴

- **SAP HANA SSFS Master Encryption Key (Security → SAP HANA Database)**
  - SAP HANA SSFS Master Encryption Key is not changed. 🔴

User-Related Alerts

**SAP ABAP AS**

- **Users with Critical Authorizations (Security → ABAP Stack)**
  - A high number of users has critical authorizations

- **Protection of Passwords in Database Connections (Security → ABAP Stack)**
  - Protection of Passwords in Database Connections

- **ABAP Password Policy (Security → ABAP Stack)**
  - Secure password policy is not sufficiently enforced.

**SAP HANA**

- **Activation Status and Validity of User SYSTEM (Security → SAP HANA Database)**
  - SAP HANA database: User SYSTEM is active and valid.

- **SAP HANA System Privilege DATA ADMIN (Security → SAP HANA Database)**
  - SAP HANA database: Users with critical privilege DATA ADMIN.

- **SAP HANA Password Policy (Security → SAP HANA Database)**
  - SAP HANA database: Secure password policy is not sufficiently enforced.
How to continue on Security
Automation services indicate security gaps

Recommendation: Detailed look into gaps through experts

Service – Part 1:
- Root cause analysis for security gaps
- SAP Security Baseline maintenance

Service – Part 2:
- Security patch deployment cycle
- Configuration setup
- Proactive threat identification

Service – Part 3:
- Security control via dashboard
