JDBC Receiver Adapter

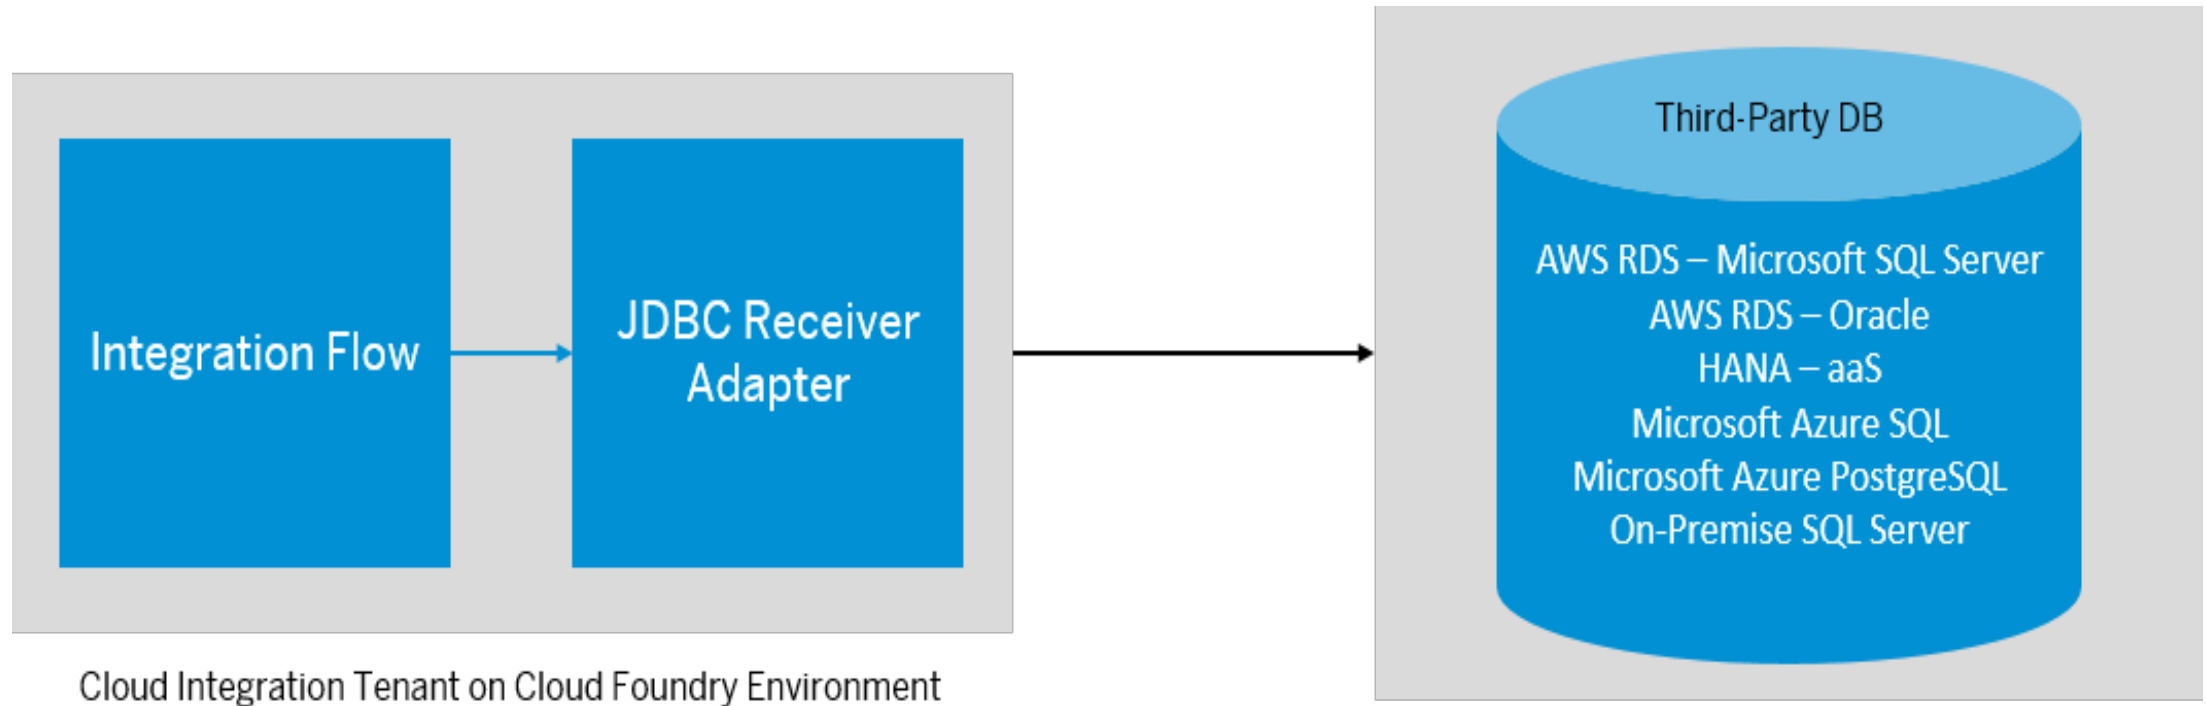

JDBC receiver adapter enables you to establish connection with SAP managed and third-party databases. Before deploying the integration flow, you're required to do the following to communicate with database:

1. Upload and deploy type-4 compliant JDBC drivers
2. Create a Data Source, to access the database, based on the uploaded JDBC driver
3. If you're connecting to on-premise database, then you must validate the connection in the Cloud Connector.
4. Configure the adapter to communicate with your database based on the environment your tenant is hosted.

Recent Enhancement in Integration Advisor

Qualifiers extended with the multi-value qualifier

- Useful for qualifiers with the same substructure
- Saves time and makes documentation easier

Leaf to group node mapping:

Leaves can directly mapped to a group node which defines the cardinality of the group
