“We create healthy data flows”

Igor Mitrovic

Guido Koopmann

We Create #HealthyDataFlows

“In this session with SAP Event Mesh”

#HealthyDataFlows

The 8 challenges that organizations encounter when it comes to IT in general

1. Business Agility
2. Implementation Done Right
3. Operational Stability
4. Right Data at the Right Time
5. Consistent Processes
6. Reference Architecture
7. Security
8. Innovation

These challenges are known for causing:

#UnHealthyDataFlows

Challenges

Cure The Unhealthy Data Flows

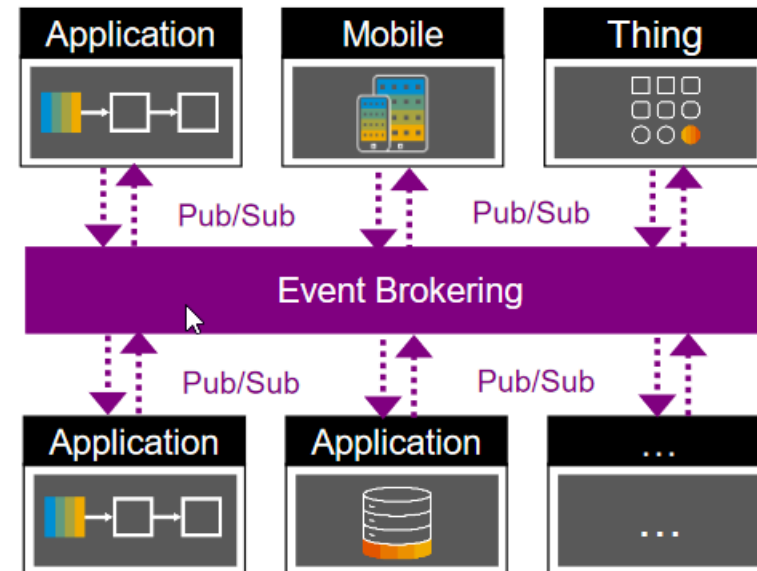

- Reduce amount of Point to Point Interfaces
- Reliability
- Processing Time
- Events

Solution

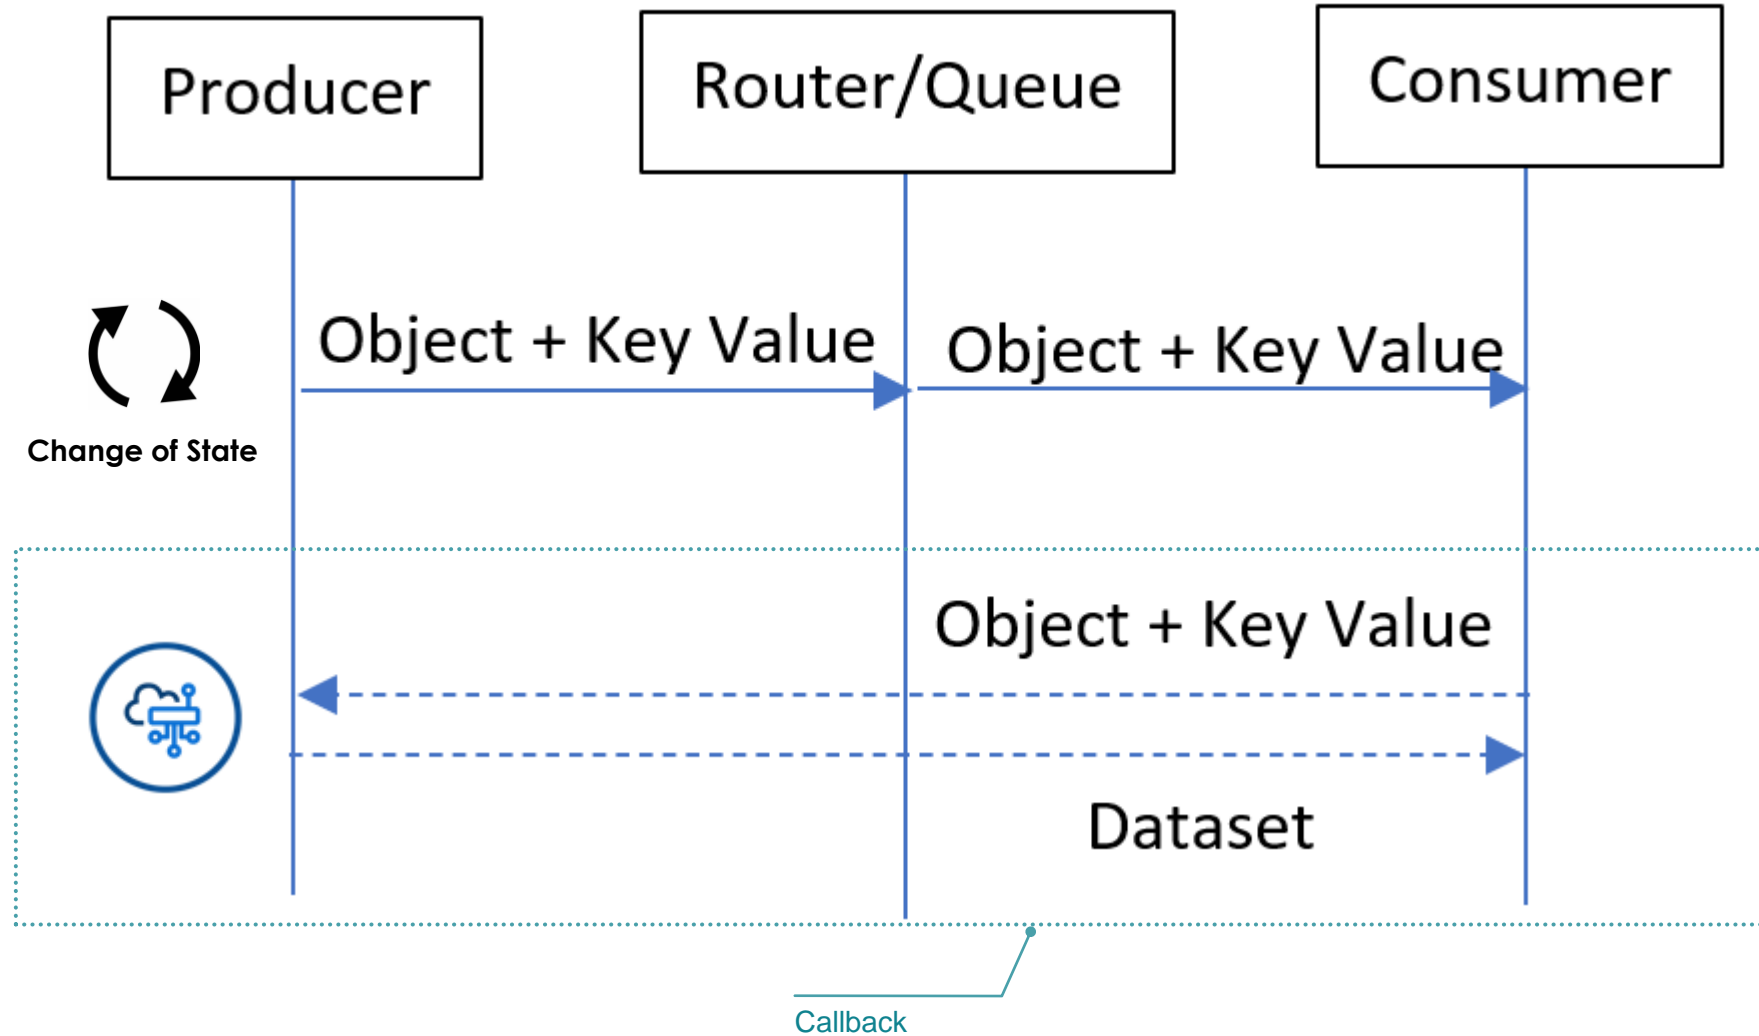

Cure The Unhealthy Data Flows

- Reference Architecture
- Event Mesh Together With SAP CPI
- Decouple Data from Source Systems and Applications
- (Near) Realtime Data Flows
- Reliability

Event-Based

General Concept

Event-Based

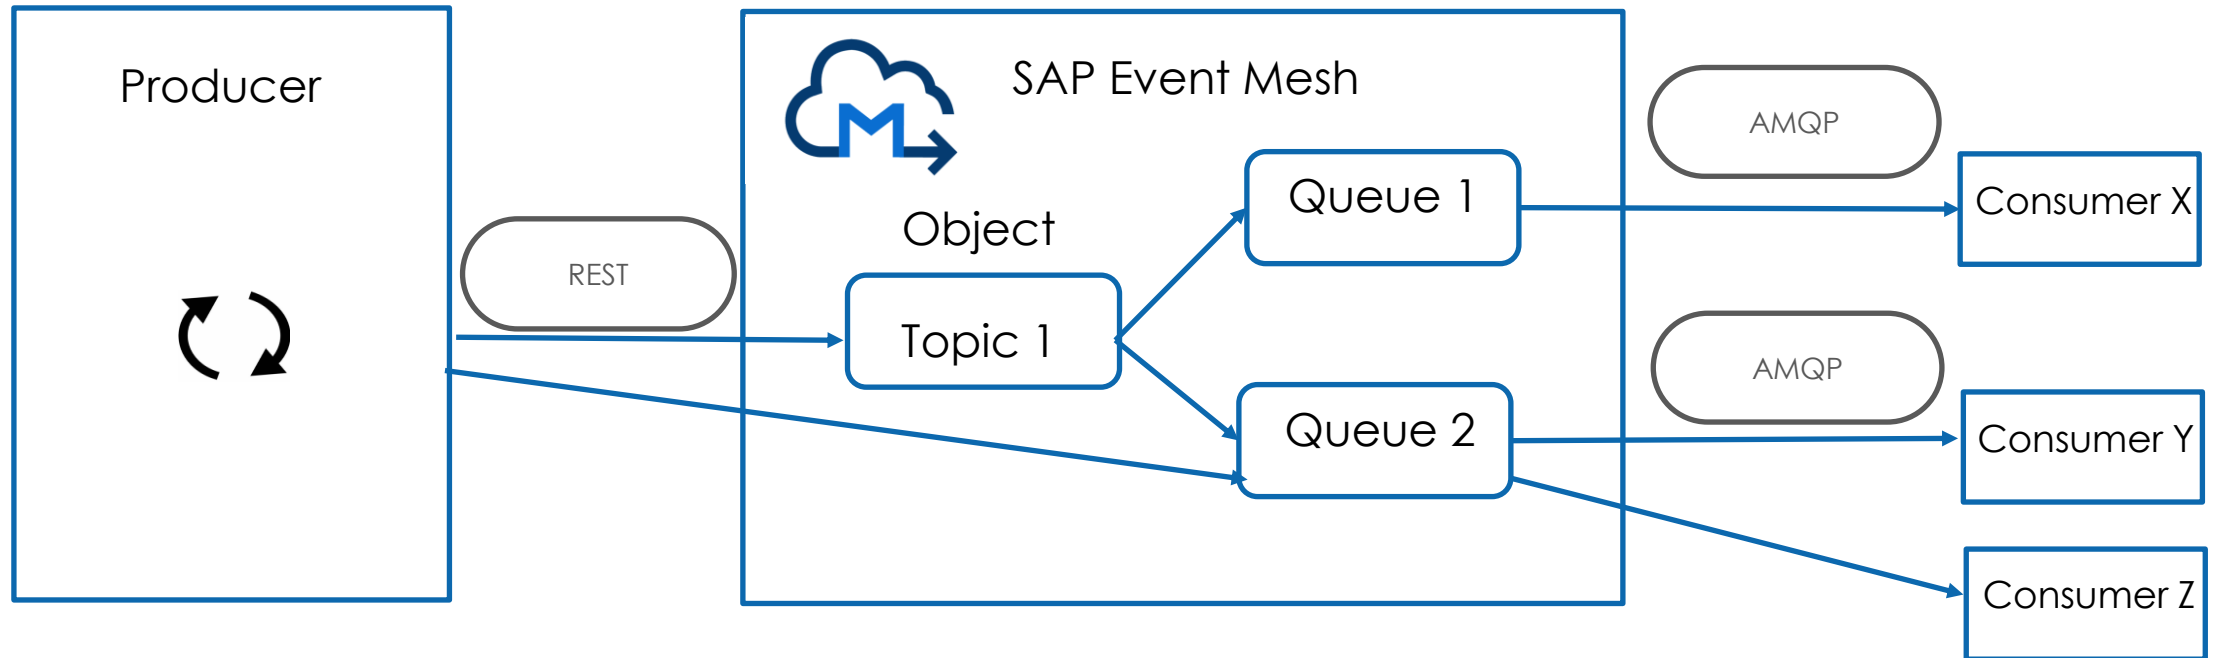

SAP Event Mesh in theory

Important options

- **Queue's and topics**
- Webhook
- Testing
- Monitoring of resources

Event-Based

		Webhooks*	50

Systems

Event Enabled Backend Systems

- SAP ECC With Event Enablement AddOn
- S/4HANA Enterprise Events
- SAP SuccessFactors
- SAP Marketing Cloud

Results

Healthy Data Flows

- Business Agility
- Efficient Development and Data
- Lower Running Costs

Event-Based

General Concept

Loose coupling

Fault tolerance

Scalable, Reliable and Resilient

Duplicated events

Error handling, Monitoring and
troubleshooting

Not always compatible

Not all objects / applications

Thank you!
