

SAP CodeJam

PURPOSE

Working with an end-to-end scenario, you'll get to see how different technologies are integrated and work together while building your solution.

TARGET AUDIENCE

Developers

EVENT FORMAT

- These events are hands-on (bring your own laptop) and take between 5-6 hours
- These events are developer community focused and supported by SAP

WHY ATTEND?

- Discuss with peers and SAP experts
- Discover a topic of choice with hands-on development and integration scenarios
- Refine your coding skills

TOPICS AVAILABLE

Within each theme, we'll provide sample scenarios and work with you and our experts to define the technologies that will be covered during the session.

UI

- Explore the frontend and UX worlds using the latest tools from SAP
- Learn about integration techniques, backend connectivity and API usage within your HTML5 and web-based apps.

Mobile

- Discover the SAP Cloud Platform SDK for iOS, SAP Fiori for iOS and other SAP services while developing a beautiful and intuitive app
- Learn how to work with oData, SAP HANA and other technologies from both SAP and mobile providers.

Big Data

- Learn about different methods to load data into your system, apply logic with SQL, and gain insights using analytics tools
- Learn about SAP HANA native development, develop full-stack apps using different languages, and create UIs using SAP Fiori and UI5.

Core

- Work with core SAP technologies such as ABAP, SAP S/4HANA, etc., and take a closer look at the integration of traditional SAP systems and tools.
